Remarks:

< VN03 ... This module is used in sets with production codes VN01 and VN02. Please see the type plate of the set for the production code.

>VN02 ... This module is used in sets with production code VN03 and higher.

< VNXY ... This module will only be used until a certain moment in time and production code. At creation of the service documentation the production code was not yet known.

Digital Board Chrysalis Version Euro 1 for sets with DV input

Digital Board Chrysalis Version Euro 2 for sets without DV input E2 ...

AL E1/PS ... Analog Board version A-Lead Euro 1, used from production start onwards.

AL E2/PS ... Analog Board version A-Lead Euro 2 for UK, used from Production Start onwards.

The Analog Board versions "AL Ex/PS" are based on the PWB layout code 3103 603 3033.

This layout code can also be seen on the underside of the Analog Board in the copper near the power supply part.

Analog Board version A-Lead Euro 1 replaces "AL E1/PS" at a certain production date.

AL E2 ... Analog Board version A-Lead Euro 2 for UK replaces "AL E2/PS" at a certain production date.

The Analog Board versions "AL Ex" are based on the PWB layout code 3103 603 3028.

The main difference to the Analog Board used at production start is the used audio digital/analogue converter; see Analog Board circuit diagram 9.

Remarks:

The EPG Board and the In/Out Extension Board IOE are only used in the DVDR80.

The DVIO Board is only present in the DVDR75 and only in combination with the Digital Board 1.5 (Empress). It is not present in DVDR75 with Digital Board 2.1 (Chrysalis).

Safety Information, General Notes

Safety Instructions 2.1

General Safety 2.1.1

Safety regulations require that during a repair:

- Connect the unit to the mains via an isolation transformer.
- Replace safety components, indicated by the symbol A. only by components identical to the original ones. Any other component substitution (other than original type) may increase risk of fire or electrical shock hazard.

Safety regulations require that after a repair, you must return the unit in its original condition. Pay, in particular, attention to the following points:

- Route the wires/cables correctly, and fix them with the mounted cable clamps.
- Check the insulation of the mains lead for external
- Check the electrical DC resistance between the mains plug and the secondary side:
 - 1. Unplug the mains cord, and connect a wire between the two pins of the mains plug.
 - Set the mains switch to the 'on' position (keep the mains cord unplugged!).
 - Measure the resistance value between the mains plug and the front panel, controls, and chassis bottom.
 - Repair or correct unit when the resistance measurement is less than 1 M Ω .
 - Verify this, before you return the unit to the customer/ user (ref. UL-standard no. 1492).
 - Switch the unit 'off', and remove the wire between the two pins of the mains plug.

2.1.2 Laser Safety

This unit employs a laser. Only qualified service personnel may remove the cover, or attempt to service this device (due to possible eye injury).

Figure 2-1

Note: Use of controls or adjustments or performance of procedure other than those specified herein, may result in hazardous radiation exposure. Avoid direct exposure to beam.

2.2 Warnings

2.2.1 General

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD, &). Careless handling during repair can reduce life drastically. Make sure that, during repair, you are at the same potential as the mass of the set by a wristband with resistance. Keep components and tools at this same potential.

Available ESD protection equipment:

- Complete kit ESD3 (small tablemat, wristband, connection box, extension cable and earth cable) 4822 310 10671.
- Wristband tester 4822 344 13999.
- Be careful during measurements in the live voltage section. The primary side of the power supply (pos. 1005), including the heatsink, carries live mains voltage when you connect the player to the mains (even when the player is 'off'!). It is possible to touch copper tracks and/or components in this unshielded primary area, when you service the player. Service personnel must take precautions to prevent touching this area or components in this area. A 'lightning stroke' and a stripe-marked printing on the printed wiring board, indicate the primary side of the power supply.
- Never replace modules, or components, while the unit is

2.2.2 Laser

- The use of optical instruments with this product, will increase eve hazard.
- Only qualified service personnel may remove the cover or attempt to service this device, due to possible eye injury.
- Repair handling should take place as much as possible with a disc loaded inside the player.
- Text below is placed inside the unit, on the laser cover

ION VISIBLE AND INVISIBLE LASER RADIATION WHEN OPEN AVOID EXPOSURE TO BEAM BBEL SYNLIG OG USYNLIG LASERSTALL NOR VED ABNING UNDGÅ UDSÆTTELSE FOR STRÅLING BBEL SYNLIG OG USYNLIG LASERSTALL NOR AND DESÉL, APINES UNNGÅ EKSPONERING FOR STRÅLEN ING SYNLIG OCH OSYNLIG LASERSTALLINING NAR DENNA DEL AR OPPNAD BETRAKTA EJ STRÅLEN AVATT ASSAG LET ALTININA ANKYALLE JA NEWTAATT OMALLE LASER SÅTELVILLE ALK KATSO SÄT EESEEN ICHT SICHTBARE UND UNSICHTBARE LASERSTRAHLUNG WENN ABDECKUNG GEÖFFIRET NICHT DEM STRÄHL AUSE TSEN ED VISIBLE AND MYSIBLE LASER RADIATION WHEN OPEN AVIDID DIRECT EXPOSURE TO DEAM NITION RAYO NIVEMENT LASER VISIBLE ET MYSIBLE EN CAS D'OUVERTURE EXPOSITION DANGEREUSE AU FAISCGU

Connecting the DVD recorder

Connecting the DVD recorder

Preparing the remote control for operation

The remote control and its batteries are packed separately in the original DVD recorder packaging. You must install the batteries in the remote control before use - described in the following section.

ENGLISH

Take the remote control and the enclosed batteries (2 batteries). 0 Open the battery compartment, insert the batteries as shown and then close the battery compartment. The state of the s

its range is approximately 5 to 10 meters. The remote control is now ready to use.

In the following sections, you will need the remote control for the first time. Aim the remote control at the DVD recorder and not at the TV set.

Connecting your DVD recorder to the TV

set

The necessary cable connections must be made before you can record or playback TV programmes using your DVD recorder. Connect the DVD recorder directly in your TV set. If there is a video recorder in between the picture quality may be poor.

We recommend that you use a scart cable to connect your TV set and DVD recorder.

The scart or Euro AV cable serves in the universal connector for picture, ound and control signals. With this type of connection, there is practically no loss of quality in picture or sound transmission.

Trid .

When you install your DVD recorder for the first time, select one of the following options:

Connecting with a scart cable and Easy Link's from This worthern link. Quink, Smart Link, I your TV ass a equipped with Easy Left Cnears Link, NorthVern Link, Quink, Smart Link, ogs. Databogic, "and you wish to use a scart cable

If your TV set is not equipped with 'Easy Link, Cinema Link, NexTVIew Link, Q-Link, Smart Link, Megalogic, Datzlogic, ... and you wish Ito use a scart cable. Connecting with a scart cable without Easy Link'

Connecting with an \$-Yideo(YIC)cable
f your IY set is equipped with an \$-Yideo(SYHS) socker.

Connecting with video(CVBS) cable | If your TV set is equipped only with an video(CVBS) socket.

Connecting with a scart cable and Easy Link

Your DVD recorder can exchange information with your TV set using 'Easy Link.' Your TV channels can also be transferred in the same order from your TV set to your DVD recorder -0000 Knos

using Easy Link'. Please see your TV's operating instructions.

Have the following cables ready: an aerial cable (1, supplied), a mains cable (2, supplied), a special scart cable (3, suitable for Easylink).

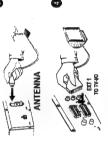

Switch off your TV set.

Plug in a special scart cable (for Enylink) into the scart socket EXT 1 TO TALP at the back of the DVD recorder and the corresponding scart scoket at the back of the TV set (see TV set operating instructions).

Switch on the TV set.

insert one end of the supplied mains cable into the mains socker.

MAINS at the back of the DVD recorder and the other end into the wall socker.

A message appears on the screen amounting that the transfer has started EFGL IIII's appears on the display during transfer. The TV set transfers all saved TV channels, in the same order, to the DVD recorder. This may take several minutes.

0

EasyLink loading data from TV; please weit

Select the next line with CH+ A or CH-W. Check if the displayed settings for 'Year', 'Month' and 'Date' are Normally the date and time are taken from the data sent by the TV channel stored on programme PDI. If the setal signal is too vesk or there is excessive interference, you should set the date and time manually. Check if the time in 'Time is correct. If required, change the time with the number buttons 9..9 on your x'Time', 'Year', 'Month', 'Date' appears on the TV screen

Switch on the DVD recorder using STANDBY/ON ひ、い5 17 Bil? will appear on the display. Then, read the paragraph on 'mittal installation' in 'installing your DVD recorder'

Connecting additional devices

Connecting additional devices to the second scart socket

ENGLISH

You can connect additional devices such as decoders, satellite receivers, camcorders, etc. to the EXT 2 AIXA/LO socker. While playback is stated on this additional device the DVD recorder automatically connects the EXT 2 AIXA/LO scart socker with the EXT 1 TO TY-HO scart socker. You will then see the picture from the additional device on your TV set, even if the DVD recorder is wiretheed fit.

The TY/DVD button on the remote control allows you to switch between playback through the EXT 2 AUX-HO scart socket and playback from the DVD recorder.

Connecting additional video recorders

If you have an SVHS video recorder you can also use the OUT S-VIDEO (V/C) socket and the OUT L. AUDIO R sockets. You can connect a video recorder to the EXT 2 AUX-I/O socket.

Please note:

Most prerecorded video cassettes and DVDs are copy-protected. If you try to copy them you will see the message $\mathbb{CB}^{3}PR\mathbb{D}^{1}$: on the DVD recorder's display.

When copying video cassettes the display on the DVD recorder shows 개인 516개인.

/ Check that the cable is plugged in firmly.

If a recording is made from a wideo recorder, change the tracking on the violes recorder. The DVD recorder may not be able to recognite the video input algoril if this signal is poor or does not comply with referent standards.

*When I copy DVD video discs ar prerecorded video cassettes the

picture is facts and the brightness varies.

This happens if you try to copy DVDs or video casettes that have been copy-protected. Even dough the picture on the TV is fine the recording on a DVD-R(W) is failty. This interference is unavoidable with copy-protected Problem.

Connecting the DVD recorder

7

<u>∞</u>

6

Connecting additional devices

Connect camcorder to the front sockets

To copy cancorder recordings, you can use the front sockets. These sockets are located behind the flap on the left hand side.

Best picture quality

ENGLISH if you have a DV or Digital 8 camcorder, connect the DV IN input of the DVD recorder to the appropriate DV output on the cancorder. When films are transferred the original recording date and time are stored as DVD subticles. On playback, this data can be displayed on the TV screen by using the \square function (Subticle).

Very good picture quality

f you have a Hi8 or S-VHS(C) camcorder, connect the S-VIDEO input of the DVD recorder to the appropriate 5-VHS output on the camcorder. You must ako connect the audio input left AUDNO right on the DVD recorder to the audio output on the camcorder

Good picture quality

If you have a camcorder that only has a single video output (Composite Video, CVBS), connect the VIDEO input on the DVD recorder to the appropriate output on the camcorder. You must also connect the audio input left AUDIO right on the DVD recorder to the audio output on the camcorder.

Connecting audio devices to the analogue audio sockets

Sorting TV channels automatically (Follow TV)

When the automatic channel search function is activated, the TV channels are stored in a specific order. This may differ from the order in which the TV channels appear on your TV set. This function changes the order of the TV channels stored in your DVD recorder to match the order ente b TV set. This only works if the DVD recorder (EXT 1 TO TV-MO tocket) and the TV set are

connected with a scart cable.

If your TV set supports 'Esyleak...', TV channels will be stoored during initial installation in the same order as they appear on the TV set. To store the TV channels in a different order, you'll need to change the order on the TV set. When you start the Follow TV function the information is transferred again from the TV set. What does EasyLink do?

Switch on the TV set. If required, select the programme number for the DVD recorder.

The 'Data error' message appears on the screen.	VThe data for the recording could not be transferred. Please check date, start time and end time of the programmed recording.
The 'Callision' message appears on the screen.	• Two programmes exceedings confine. If you ignow that error message the store with the series stars and will be resorted first. The start of the second store will not be recorded. • Change the starting or entering of the year recordings. • Change that a the two recordings.

In this section you will learn how as set your user preferences on the DVD recorder. The symbols have the following meanings:

|--|--|

ЕИСГІЗН

- Switch on the TV set. If required, select the programme number for the DVD recorder.
- Press SYSTEM-MENU on the remote control. The menu bar
- Select TA' using ◀ or ▶ and confirm with CH·▼.
- Select the appropriate function with CH-▼ or CH+▲ and confirm
- Select the appropriate line using CH- Ψ or CH+ Δ and confirm with Ψ .
- Select the appropriate function using CH-▼ or CH+▲ or the setting with ◀ or ▶.
- Confirm the new setting by pressing OK.

To close the menu item, press

Picture settings

You can choose the following features in this menu:

The picture signal from your DVD Recorder can be set to match your TV screen. 4.3 letterbox: for a wide-screen picture with black bars at the top and bottom 4.3 panscart: for a full-height picture with the sides trimmed.
16.9: for a wide-screen TV set (screen edge ratio 16.9)

Black level shift

Adapts the colour dynamics for NTSC playback

Vertical video shiff

Use this feature to adjust the position of the picture on your TV left or right using ◀, ▶ to suit your TV set.

'SCART video'

ENCLISH By default the recorder is set to 'RGB'. Select 'S-Video' if you want to connect an S-VHS

Sound settings recorder.

Depending on which audio outputs are used, you can select the settings in this menu. If you only use the analogue audio output (OUT L. AUDIO R.), select the settings 'Off in the 'Digital output' menu.

Digital output

For devices connected to the DIGITAL AUDIO OUT socker, you can select from the following

'All': Doby Digital and DTS signals are fed unaltered to the digital output. MPEG-2 multi-channel signals are converted to PCH (Plails Code Hookalon). For receivers/amplifiers with digital multit-channel sound decoders. PCM only. Doby Digital and MPEG-2 multi-channel signals are converted to PCH (Pulse Code

For receivers/amplifiers without digital multi-channel sound decoders.

'Off. Digital output switched off.

For devices with analogue audio input.

Analogue outpur

For devices connected to the analogue audio output (OUT L AUDIO R.), you can select from the following settings.

Stereo: For devices without DolbySurround or TruSurround. Use this setting if the DVD

recorder is only connected III a stereo TV set.

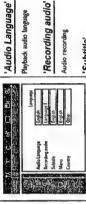

'Surround: Dolby Digital and MFEG-2 multi-channel are mixed down to a DOLBY surround-compatible two-channel output signal. For devices with Dolby Surround Pro Logic decoder.

Night mode

Night mode optimises the sound for playback at low volume. You are therefore less likely to disturb your neighbours. This only works for Dolby Digital audio on DVD video discs.

Language settings

You can choose the following settings in this menu:

'Audio Language' Playback audio language

'Subtitle'

Subtide language

'Menu'

Screen menu language

Country

Country'

Additional settings

You can select the following functions in this menu:

'Status box'

Along with the on screen menu, the OSD (On Screen Display) also displays information on the current operating status (counter, playback, recording. TV channel, etc.) on the TV screen. You can switch off the information about the operating status so that the on screen display (OSD) is not recorded during copying.

'On': The OSD information appears in every selected mode for a few seconds and disappears

Off: The OSD information is switched off. It is no longer displayed on the screen.

Z

User preferences

Disk feature menu

In this menu you can make the changes that relate to the disc:

N T C K D B Q

ENGLISH

To save power, you can switch off the clock display on the DVD recorder. Programmed (TIMER) recordings will still take place. in addition, you can present the most important features of the DVD recorder in scrolling text in the display (demo).

'Standby'

Low power: If the DVD-Recorder is switched off (button STANDBY C), the clock display is

also switched off.

'Access control'

Please read the next chapter on 'Access control (child lock)'.

If payback of a pre-recorded DVD video disk or video CD is interrupted (button STOP ■ or OPEM/CLOSE≜) when the disk is reloaded (disk is started) playback starts at the precise location where it stoopped. This applies not only to the current disk but to the last 20 disks 'Auto resume'

This feature can be switched off if not required.

You can change the brightness of the display on the DVD recorder. This setting only affects the DVD recorder when it is switched on.

'Display'

"Bright": The display appear with normal brightness. The disc tray light is switched on.

'Dimmed': The display appears less bright. The disc tray light is switched off.

Off: The display and the disc tray light are switched off.

'Demo mode': If the DVD recorder is switched off with the STANDBY O button, a list of the most important features is shown in the display.

Off: If the DVD-Recorder is switched off (button STANDBY &), the clock display is visible.

PBC

This line appears only if a VCD is loaded. This function lets you activate or deactivate the PBC menu (Playback Control) for video CDs. See Playing a (Super) Video CD'. Finalise disc'

This feature allows you to finalise DVD+R discs. If the disc has already been finalised this line will appear darker.

'Adapt disc formaf

if a DVD+RW has been recorded in a computer drive or in another DVD recorder the Index screen may not be displayed correctly.

This feature allows you to change the format of the disc.
It is therefore only visible if the disc format is different.

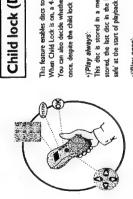

The DVD recorder also responds to the remote control of a DVD player (remote control code RC-6). Choose this setting if your Philips TV remote supports DVD $\,$

'DVD recorder': The DVD recorder only responds to the supplied remote control.

In this menu you can set the remote control type to which your DVD recorder should respond.

Remote Control settings

'DVD player': The DVD recorder responds to a DVD player remote control.

Child lock (DVD and VCD)

This feature enables discs to be locked for children.

When Child Lock is on, a 4-digit code (PIN) needs to be entered before a disc can be played.

You can also decide whether the inserted disc should always be played or should be played only

·)'Pfay ahways':

ENGLISH This doc is stored in a memory with space for 50 child-safe discs. If more than 50 discs are stored, the last disc in the list is removed and the new disc is added. The screen shows 'Child safe at the start of playback.

•) Play once: This dist is only authorised for single playback. If the recorder is switched off, the PIN code must be re-entered.

Activating/deactivating child lock

- Switch on the TV set. If required, select the programme number for the DVD recorder.
- Press SYSTEM-MENU. The menu bar appears

Switch on the DVD recorder using STANDBY/ON &

- Select the ¶\' icon using ◀ or ▶.
- Select "C(Disc features)' using CH- ♥ or CH+ ▲ and confirm
- Confirm 'Access control using >

6

Enter a 4-digit code of your choice. If the code is new, you may have to enter the code a second time as confirmation.

0 0

- Select 'Child lock' using CH+ ▲ or CH- ▼ and confirm with ▶ .
- Select the 'B' icon using CH-♥ or CH+▲
- Confirm with OK.
- Quit the feature using and SYSTEM-MENU

Unauthorised discs can only be played by entering the four-digit PIN code. To deactivate the child lock, select the (B) icon in (Q)

Authorising a disc

- Insert a disc. The access control box will appear after a short delay.
- Using CH+ ▲ or CH- ▼ select 'Play once' or 'Play always'.
- Enter your PIN code using the number buttons 0..9.

Double-sided DVDs may have a different ID for each side. For these discs, each side must be authorised. Multi-volume video CDs may have a different ID for each volume. For these CDs, each volume must be authorised.

Locking unlocked discs

To lock a disc that was formerly authorised follow the instructions below

- Insert a disc. Playback starts automatically, if the playback does not start automatically, press PLAY \blacksquare .

Parental level control (DVD video only)

films on pre-recorded DVD discs may contain scenes not suitable for children. Therefore, some discs may contain Parental Control rating information that applies to the entire disc or to certain scenes on the disc.

The appropriate scenes have lifter values that reach from 1-8. If such a scene is detected during playback, the filter value sec on the DVD reacorder is compared to the scene, if the filter value is heigher than the secting, an alternative scene will be played (if available). Post DVDs, apply the rating to an entire DVD. Therefore, if certain scenes exceed the rating you select, the entire disc will be blocked from viewing.

Access control (Child Lock)

Activating/deactivating parental level

control

Switch on the TV set. If required, select the programme number for the DVD recorder. 0

ENGLISH

Switch on the DVD recorder using STANDBY/ON &.

Press SYSTEM-MENU. The menu bar appears

Select the TA' icon using ◀ or ▶.

0 6

Select $\textcircled{D}(Disc\ features)$ using CH-f V or CH+f A and confirm with f V .

Confirm 'Access confrol using ▶. 0

Enter a 4-digit code of your choice. If the code is new, you may have to enter the code a second time as confirmation.

Select the 'Parental level using CH+ Δ or CH- Ψ and confirm with $\mathbb P$, A bar appears to select the parental level.

© 6

Select the appropriate rating using CH- Ψ , CH+ Δ or the number buttons 0..9.

What happens if a DVD scene contains a higher level than the rading set? Rating 0 (displayed as --) parental control not active. Rating 1 (axiable for children) Rating 8 (only suitable for adults) What do the ratings mean?

Confirm with OK. Quit using 4 and SYSTEM-MENU 8

If the recorder does not find a suitable alternative, playback will stop and you must enter the four-digit code.

The set fifter values depend on the respective country. It is therefore necessary to enter the country m which these fifter values apply.

Switch on the TV set. If required, select the programme number for the DVD recorder.

Switch on the DVD recorder using STANDBY/ON &.

Press SYSTEM-MENU. The menu bar appears

Confirm the line 'Access control' using .

Enter your four-digit code. If the code is new, you may have to enter the code a second time as confirmation. Select 'Change country' using CH-♥ or CH+▲ and confirm with

Changing the country

Select line *\(\mathbb{O}\)(Disc features)' using CH-\(\Psi\) or CH+\(\mathbb{A}\) and confirm with \(\mathbb{P}\). Select the "TA" icon using ◀ or ▶.

5. Diagnostic Software

Due to the complexity of the DVD recorder, the time to find a defect in the recorder can become long. To reduce this time, the recorder has been equipped with Diagnostic and Service software (DS). The DS offers functionality to diagnose the DVDR hardware and tests the following:

- · Interconnections between components
- · Accessibility of components
- · Functionality of the audio and video paths

This functionality can be accessed via several interfaces:

- 1. End user/Dealer script interface
- 2. Command Interface
- Player script interface for sets with Digital Board 1.5, Empress
- 4. Menu interface for sets with Digital Board 1.5, Empress

5.1 End User/Dealer Script Interface

5.1.1 Description

The End user/Dealer script interface gives a diagnosis on a stand alone DVD recorder. During this mode, a number of hardware tests (nuclei) are automatically executed to check if the recorder is faulty. The diagnosis is simply a "fail" or "pass" message. If the message "FAIL" appears on the display, there is apparently a failure in the recorder. If the message "PASS" appears, the nuclei in this mode have been executed successfully. There can be still a failure in the recorder because the nuclei in this mode don't cover the complete functionality of the recorder.

5.1.2 Structure

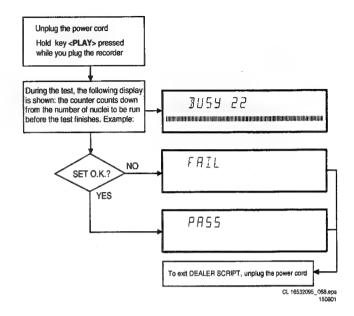

Figure 5-1

The End use/Dealer script executes all diagnostic nuclei that do not need any user interaction and are meaningful on a standalone DVD recorder.

5.1.3 Contents for sets with Digital Board 1.5, Empress

The nuclei called in the End user/Dealer script are the following:

Counter	Nucleus	Name	Description
22	104	HostdSdramWrR	checks all memory locations of the 4MB SDRAM
21	106	HostdDramWrR	checks all the DRAM connected to the microprocessor of the digital board
20	123	Hostdl2cNvram	checks the data line (SDA) and the clock line (SCL) of the I2C bus between the host decoder and NVRAM
19	202	SAA7118l2c	checks the interface between the Host I2C controller and the AVENC SAA7118 Video Input Processor
18	200	VideoEncl2c	checks the interface between the host I2C controller and Empress SAA6752
17	207	AudioEncl2c	checks the I2C connection between the host decoder and Empress SAA6752
16	204	AudioEncAccess	tests the HIO8 interface lines between the host decoder and the audio encoder
15	203	AudioEncSramAccess	checks the access of the SRAM by the audio encoder (address and data lines).
14	205	AudioEncSramWrR	tests the SRAM connected to the audio encoder
13	206	AudioEncInterrupt	tests the interrupt line between the host decoder and the audio encoder
12	300	VsmAccess	checks whether the VSM interrupt controllers and DRAM are accessible
11	303	VsmInterrupt	checks both interrupt lines between the VSM and the host decoder
10	302	VsmSdramWrR	tests the entire SDRAM of the VSM
9	1400	Clock11_289MHz	switches the A_CLK of the micro clock to 11.2896 MHz
8	1401	Clock12_288MHz	switches the A_CLK of the micro clock to 12.288 MHz
7	601	BeS2Bengine	checks the S2B interface with the Basic Engine by sending an echo command
6	500	DisplayEcho	checks the interface between the host processor and the slave processor on the display board
5	700	AnalogueEcho	checks the interface between the host processor and the microprocessor on the analogue board
4	711	AnalogueNvram	checks the NVRAM on the analogue board
3	706	AnalogueTuner	checks whether the tuner on the analogue board is accessible

Counter	Nucleus	Name	Description
2	901	LoopAudioUserDealer	This nucleus tests the components on the audio signal path The host decoder - The analogue board - The audio encoder - The VSM Attention: the rear cinch audio out has to be connected to the front cinch audio in.
1	906	LoopVideoUserDealer	Nucleus for testing the components on the video signal system path: - The VIP - The video encoder - The VSM - The host decoder - The analogue board Attention: the rear cinch video out has to be connected to the front cinch video in.

5.2 Player Script Interface only for sets with Digital **Board Chrysalis**

5.2.1 Description

The Player script will give the opportunity to perform a test that will determine which of the DVD recorder's modules are faulty, to read the error log and to perform an endurance loop test. To successfully perform the tests, the DVD recorder must be connected to a TV set.

To be able to check results of certain nuclei, the player script expects some interaction of the user (i.e. to approve a test picture or a test sound). Some nuclei (e.g. nuclei that test functionality of the DVDR module) require that a DVD+RW disc is inserted.

Only tests within the scope of the diagnostic software will be executed hence only faults within this scope can be detected.

5.2.2 Structure of the Player Script

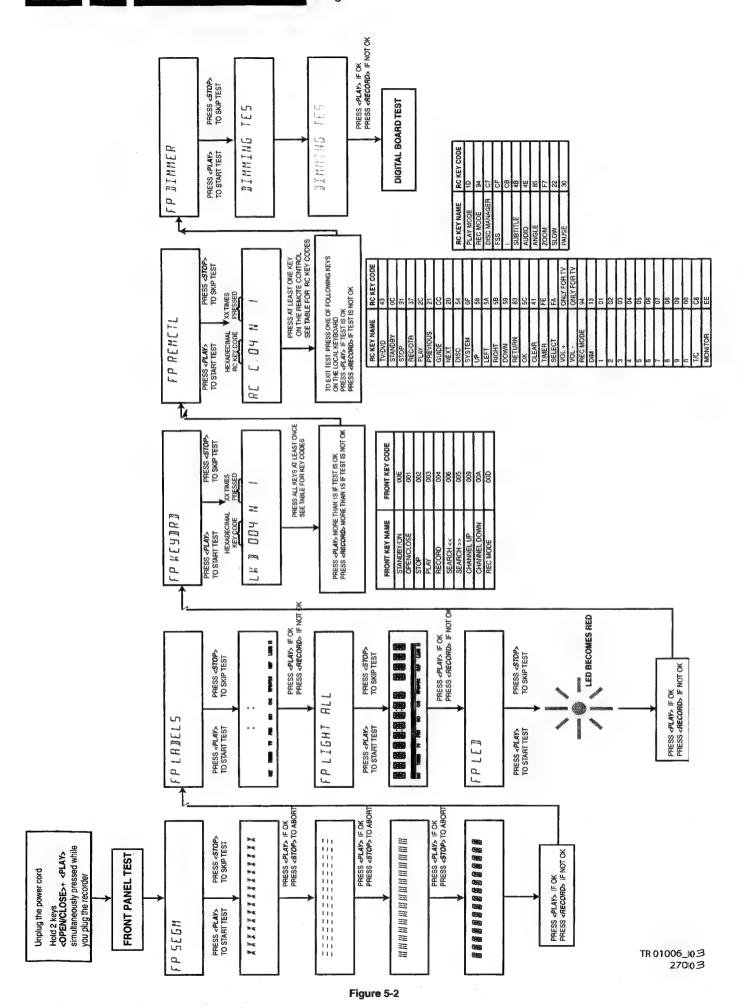

The player script consists of a set of nuclei testing the hardware modules in the DVD recorder: the Display PWB, the Digita I PWB, the Analogue In/Out PWB and the DVDR module. Nuclei run by the player test need some user interaction; in the next table this interaction is described. The player test isdone in two phases:

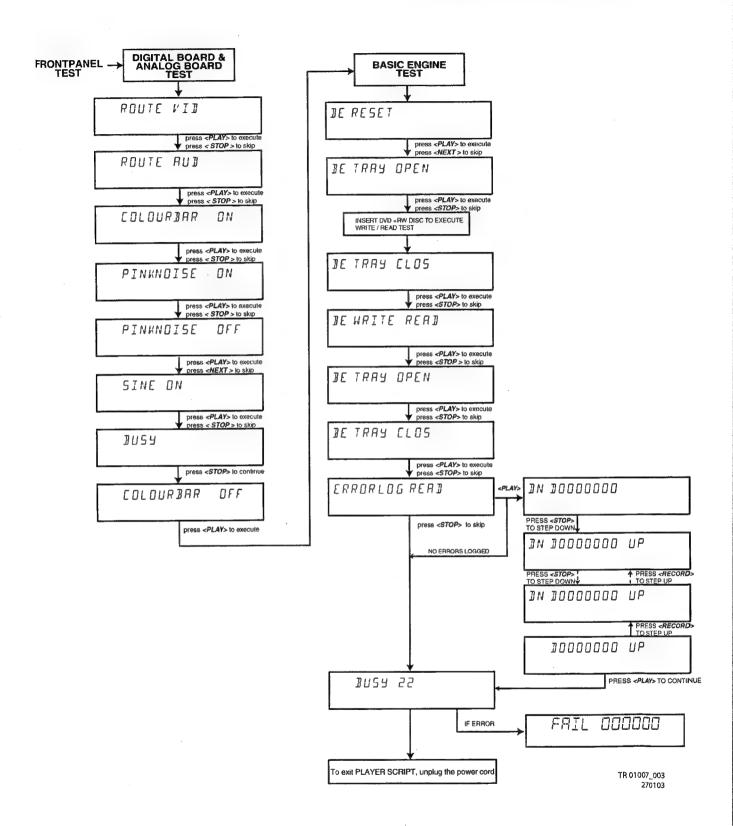

- Interactive tests: this part of the player test depends strongly on user interaction and input to determine nucleus results and to progress through the full test. Reading the error log information can be useful to determine any errors that occurred recently during normal operation of the DVD
- The loop test will perform the same nuclei as the dealer test, but it will loop through the list of nuclei indefinitely.

STEP	DESCRIPTION	NUCLEUS
1	Press OPEN/CLOSE and PLAY at the same time and POWER ON the recorder to start the playerscript	2
2	The local display shows FPSEGMENTS . Press PLAY to start the test. First the <i>starburst pattem</i> is lit, then the <i>horizontal segments</i> are lit, followed by the <i>vertical segments</i> and the last test is <i>light all segments</i> test. After each of the 4 tests the user has to confirm that the correct pattern was lit. Press PLAY to confirm that the correct pattern was lit (four times if the FPSEGMENTS test was successful). Press RECORD to indicate that the correct pattern was not successfully lit. Press STOP to skip this nucleus.	

STEP	DESCRIPTION	NUCLEUS
3	The local display shows FPLABELS. Press PLAY to start the test.	503
	Press PLAY to confirm that all labels are lit.	
	Press RECORD to indicate that not all labels are lit.	
	Press STOP to skip this nucleus. The local display shows FPLIGHT ALL. Press PLAY to start the test.	520
ı	Press PLAY to confirm that everything was lit.	520
	Press RECORD to indicate that not all patterns are lit.	
	Press STOP to skip this nucleus.	
5	The local display shows FPLED. Press PLAY to start the test.	504
	Press PLAY to confirm that the led is lit.	
	Press RECORD to indicate that the led is not lit.	
	Press STOP to skip this nucleus.	
6	The local display shows FPKEYBOARD. Press PLAY to start the test.	505
	Attention all keys have to be pressed to get a positive result! Press PLAY for more than one second to confirm that all the keys were pressed and shown on the local dis-	
	play. If not all the keys were pressed, a FAIL message will appear on the local display.	
	Press RECORD for more than one second to indicate that not all keys were pressed and shown on the local	
	display.	
	Press STOP for more than one second to skip this nucleus.	
7	The local display shows FPREMOTE CONTROL. Press PLAY to start the test.	506
	Press PLAY to confirm that a key on the remote control was pressed and shown on the local display. Only	
	one key has to be pressed to get a successful result.	
	Press RECORD to indicate that the key on the remote control was pressed but not shown on the local display. Press STOP to skip this nucleus.	
		518
3	The local display shows FPDIMMER. Press PLAY to start the test. Press PLAY to confirm that the text on the local display was dimmed.	316
	Press RECORD to indicate that the text on the local display was not dimmed.	
	Press STOP to skip this nucleus.	
9	The local display shows ROUTE VIDEO. Press PLAY to start the test.	712
	Press STOP to skip this nucleus.	
10	The local display shows ROUTE AUDIO. Press PLAY to start the test.	713
	Press STOP to skip this nucleus.	
11	The local display shows COLOUR-BAR ON. Press PLAY to start the test.	120
	Press STOP to skip this nucleus.	
12	The local display shows PINK NOISE ON. Press PLAY to start the test.	115
	Press STOP to skip this nucleus.	
13	The local display shows PINK NOISE OFF. Press PLAY to start the test.	116
	Press STOP to skip this nucleus.	147
14	The local display shows SINE ON. Press PLAY to start the test.	117
	Press STOP to stop the sine. Press STOP to skip this nucleus.	
15	The local display shows COLOUR-BAR OFF. Press PLAY to start the test.	121
15	Press STOP to skip this nucleus.	
16	The local display shows BERESET. Press PLAY to start the test.	603
10	Press STOP to skip this nucleus.	
17	The local display shows BETRAY OPEN. Press PLAY to start the test.	616
	Press STOP to skip this nucleus.	
18	The local display shows BETRAY CLOSE. Press PLAY to start the test.	615
	Press STOP to skip this nucleus.	
19	The local display shows BEWRITE READ. Press PLAY to start the test.	617
	Press STOP to skip this nucleus.	
20	The local display shows BETRAY OPEN. Press PLAY to start the test.	616
	Press STOP to skip this nucleus.	
21	The local display shows BETRAY CLOSE. Press PLAY to start the test.	615
	Press STOP to skip this nucleus.	
22	The local display shows READ ERRORLOG. Press PLAY to start the test.	633
	Press STOP to skip this nucleus.	
	If the player test succeeded, the user/dealer script will start in an endless loop.	
	If the player test failed, the local display will display FAIL and the error code	L

In case of failure, the display shows " FAIL XXXXXX ". The description of the shown error code can be retrieved in the survey of Nuclei Error Codes (paragraph 5.4). Once an error occurs, it is not possible to continue the player script. Unplug the set and restart the player script. By pressing the STOP key, it is possible to jump over the failure and to continue the player script.

5.2.3 Error Log

Explanation:

The application errors will be logged in the NVRAM. The maximum number of error bytes that will be visible is 19. The last reported error is shown as DN D0000000, the oldest visible error as D0000000 UP and the errors in between as DN D0000000 UP. DN stands for DOWN, UP stands for UPWARDS. The shown error codes are identical to the Nuclei Error Codes (paragraph 5.4).

5.2.4 Trade Mode

TRADE MODE

When the recorder is in Trade Mode, the recorder cannot be controlled by means of the front key buttons, but only by means of the remote control.

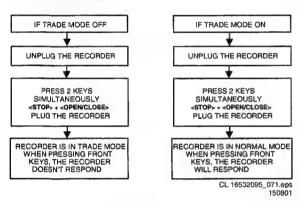

Figure 5-4

5.2.5 Virgin mode

If you want that the recorder starts up in Virgin mode, follow this procedure:

- Unplug the recorder
- plug the recorder again while you keep the STAND BY/ON key pressed
- the set starts up in Virgin mode.

5.3 Menu and Command Mode Interface

5.3.1 Nuclei Numeration

Each nucleus has a unique number of four digits. This number is the input of the command mode.

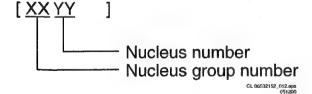

Figure 5-5

The following groups are defined for Digital Board 1.5, Empress:

Group number	Group name
0	Basic / Scripts
1	Host decoder (Sti5505 and memory)
2	Audio / video encoder (DVDR only)
3	VSM (DVDR only)
4	NVRAM
5	Front Panel

Group number	Group name
6	Basic Engine
7	Analogue board (DVDR only)
8	DVIO (DVDR only)
9	Loop nuclei (DVDR only)
10	Library sub nuclei (I2C nuclei)
11	User interface
12	Furore (SACD only)
13	DAC (SACD only)

The following groups are defined for Digital Board Chrysalis:

Group number	Group name
0	Basic / Scripts
1	Chrysalis
2	Boot EEPROM
3	NVRAM
4	SDRAM
5	Flash
6	Video Input Processor
7	DVIO
8	Progressive Scan
9	Basic Engine
10	Display and Control Board
11	Analogue Board
12	System

5.3.2 Error Handling

Each nucleus returns an error code. This code contains six numerals, which means:

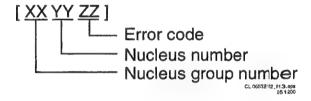

Figure 5-6

The nucleus group numbers and nucleus numbers are the same as above.

5.3.3 Command Mode Interface

Set-Up Physical Interface Components

Hardware required:

- Service PC
- one free COM port on the Service PC
- special cable to connect DVD recorder to Service PC
 The service PC must have a terminal emulation program (e.g. Hyperterminal) installed and must have a free COM port (e.g. COM1). Activate the terminal emulation program and check that the port settings for the free COM port are: 19200bps, B data bits, no parity, 1 stop bit and no flow control. The free COM port must be connected via a special cable to the RS232 port of the DVD recorder. This special cable will also connect the test pin, which is available on the connector, to ground (i.e. activate test pin).

Code number of PC interface cable: 3122 785 90017

Activation Digital Board 1.5 Empress

Plug the recorder to the mains and the following text willappear on the screen of the terminal (program):

DVD Video Recorder Diagnostic Software version 48 Basic SDRAM Data bus test passed Rasic SDRAM Address bus test passed Basic SDRAM Device test passe enu, (C) ommand or (S) 2B-interface? IMI : R C -DD:> CL 16532095_073 eps

Figure 5-7

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the three possible interface forms. If pressing C has made a choice for Command Interface, the prompt ("DD>") will appear. The diagnostic software is now ready to receive commands. The commands that can be given are the numbers of the nuclei.

Activation Digital Board Chrysalis

- Pull the mains cord from the recorder and reconnect it again (reboot).
- The next welcome message will appear on the PC:

Welcome screen D&S program

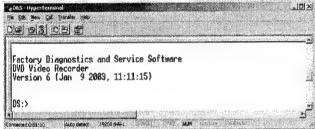

Figure 5-8

Now, the prompt 'DS:>' will appear. The diagnostic software is now ready to receive commands. The commands that can be given are the numbers of the nuclei. If you see above shown screen, continue with paragraph 'Nuclei Codes'.

It is possible that the next messages will appear when starting the DVD+RW for the first time

Error messages D&S program

Figure 5-9a

Error messages D&S program

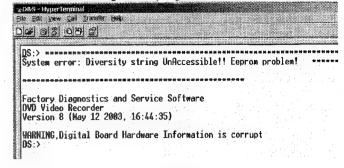

Figure 5-9b

In these cases, the boot EEPROM of the Chrysalis Digital Board does not contain the required string with the hardware information. To update the Digital Board with the correct string, nucleus 1226 must be executed.

See next section 'Diversity String Input'. There can also be the next error message.

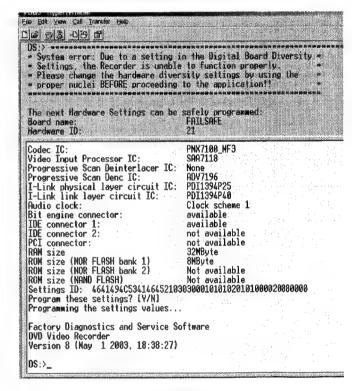

Figure 5-9c

Enter "Y" to program a safe string. With this automatically generated string the board will work in principle but it has to be checked if all board settings were detected correctly.

Diversity String Input

4. Execute nucleus 1226 to enter the string. Please see chapter 8.5 for details

Nucleus 1226 execution with string

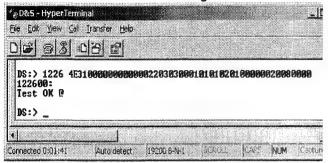

Figure 5-10

To check if the hardware info is filled correctly, you can execute nucleus 1228.

Nucleus 1228 info example

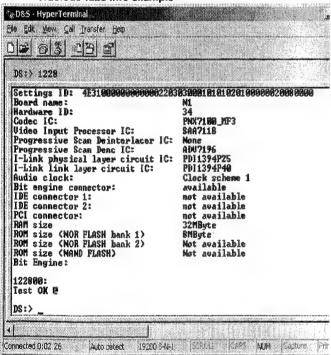

Figure 5-11

- 6. Exit the 'Terminal' program.
- 7. Reboot the DVD recorder to allow the software to start.

Command Overview Digital Board 1.5 Empress
We provide an overview of the nuclei and their numbers. This overview is preliminary and subject to modifications.

Routing Audio and Video

Route Video

Nucleus Number: 712

Description

This nucleus routes the video signals on the analogue board to the destination determined by the input parameters

The paths that are available for video routing and their description (Euro region):

Path ID	Description					
00	Input signal is VIDEO(CVBS) from digital board and will be re-routed back to the digital board.					
01	Input signal is from FRONT VIDEO(CVBS) IN and will be routed to the digital board.					
02	No Routing.					
03	Input signal is from FRONT S-VIDEO(Y/C) and will be routed to the digital board.					
04	No Routing.					
05	Input signal is CVBS from SCART1 and will be routed to the digital board.					
06	Input signal is CVBS from SCART2 and will be routed to the digital board.					
07	Input Signal is CVBS from Digital Board and it will be routed to Scart1 and Scart2.					
08	Input signal is VIDEO(CVBS) from ANTENNA IN and will be routed to SCART2.					
09	Input signal is VIDEO(CVBS) from SCART1 and will be routed to SCART2.					
10	Input signal is VIDEO(CVBS) from SCART2 and will be routed to SCART1.					
11	Signal path is routed Fast Blank from Scart2 pin16 and will be routed Scart1 pin16					
12	Input Signal is YC from Digital Board and it will be routed to Scart1.					
13						
14	No Routing.					
15	Input Signal is CVBS from TUNER and it will be routed to Digital .					
16	No Routing.					
17	Input Signal is routed from digital board YC to REAR S-VIDEO(YC) OUT					
18	Signal path is routed from digital board RGB to RGB SCART1 and from digital board CVBS to digital board CVBS.					
19	No Routing.					
20	Input RGB Signal is routed from Digital Board to SCART1(RGB),Input CVBS Signal from Digital Board to Digital Board and Fast Blanking Signal from Scart 2 to Scart1.					
21	Input Y/C Signal from Digital Board is routed to Rear Y/C Connector and Input Y/c Signal from Front Y/C connector is routed to Digital Board.					

Example

DD:> 712 01

71200: Video routing on the Analogue Board OK.

Test OK @

Route Audio

Nucleus Number: 713

Description

This nucleus routes the audio on the analogue board to the destination determined by the input parameters

The paths that are available for audio routing and their description (Europe version)

Path ID 🔠	Description			
00	Input signal is from FRONT AUDIO IN and will be routed to the digital board. (This is done so that nucleus 901 works)			
01	Input signal is from FRONT AUDIO IN and will be routed to the digital board.			
02	No Routing.			
03	Input signal is AUDIO from SCART1 and will be routed to the digital board.			
04	Input signal is AUDIO from SCART2 and will be routed to the digital board.			
05	No routing.			
06	No routing.			
07	Input Audio signal is from the digital Board and it will be routed to the Scart 1 and Scart2			
08	Input AUDIO signal from TUNER and will be routed to SCART2.			
09	Input signal is AUDIO from SCART1 and will be routed to SCART2.			
10	Input audio signal from Scart2 is routed to Scart1.			
11	Input Audio signal is routed from DVIO to Scart2.			
12				
13	No Routing.			
14	Input is Audio Signal from DVIO and it will be routed to Digital Board.			
15	Input is Audio Signal from TUNER and it will be routed to Digital Board			
16	No routing.			
17	No Routing.			
18	Input signal is from FRONT AUDIO IN and will be routed to SCART2.			
21	Input signal is from FRONT AUDIO IN and will be routed to the digital board. (This is done so that nucleus 909.1 works)			

Test OK @

Command overview Digital Board Chrysalis
Below you will find an overview of the nuclei, their numbers, and their error codes. This overview is preliminary and subject to modifications.

Chrysalis (CHR)

Nucleus Name	DS_CHR_DevTypeGet		
Nucleus Number	100		
Description	Sends the device ID and the module ids and revisions of the PNX7100 (Chrysalis) to the stdout port.		
Technical	Determine the codec ID by means of comparing version ids of the modules. Read the module-id register from every module.		
Execution Time	Less than 1 second.		
User Input	None		
Error	Number	Description	
	10000	Getting the information succeeded	
	10001	Wrong codec ID detected	
	SIF(0x013b) 1.0 EJTA BOOT (0x010a) 1.0 C DEBUG (0x0116) 0.0 UART2 (0x0107) 0.1 I2C1 (0x0105) 0.1 DISP0 (0xa015) 0.1 SPU (0xa00e) 0.0 CCIR (0x0139) 1.0 DV (0xa00c) 0.0 SGDX (0xa008)0.0 ACOMP (0xa000) 0.0 SCR (0x0000) 0.0	IMF2 INTC (0x011d) 1.0 PCI-XIO(0x0113) 1.0 AG (0x0104) 0.0 S-BCU (0x0102) 1.0 CONFIG (0x013f) 1.0 RESET (0x0123) 1.0 D UARTO (0x0107) 0.1 UART1 (0x0107) 0.1 UART3 (0x0107) 0.1 I2CO (0x0105) 0.1 GPIO (0x013c) 1.0 SYNC (0x013a) 1.0 DISP1 (0xa00f) 0.0 OSD (0x0136) 0.1 MIXER (0x0137) 1.0 DENC (0x0138) 0.1 VDEC (0x0133) 0.1 PARSER (0xa00d) 0.0 BEI (0xa00a) 0.0 IDE (0xa009) 0.0 BYTE (0xa00b) 0.0 OUTPUT (0xa003) 0.0 D VFE (0xa001) 0.0 VCOMP (0xa002) 0.0 SIFF (0xa001) 0.0 WMD (0xa010) 0.0 AUDIO1 (0xa00f) 0.0 PSCAN (0xa018) 0.0	

Nucleus Name	DS_CHR_TestimageOn		
Nucleus Number	101		
Description	Generates a test-image of a selected video standard on selected video output on the digition board. When no input is given, the default values will be used. Use nucle DS_ANAB_VideoRouting to route the video signal on the analogue board output		
Technical	- Validate the user input Initialise the SYNC module Initialise the DISPLAY module Initialise the MIXER module Initialise the DENC module Set the selected video standard Generate the selected test image in memory Start the DISPLAY module Start the MIXER module Start the DENC module according to the selected test image id.		
Execution Time	1 second.		

User Input	The user has to decide which test image, video standard and video output must be used:					
·	Test image id:					
	0 VERTICAL_COLOURBAR (default)					
	1 HORIZONTAL	COLOURBAR				
	2 WHITE					
	3 YELLOW					
	4 CYAN					
	5 GREEN	·				
	7 RED	6 MAGENTA				
	8 BLUE					
	9 BLACK					
	10 GRAY					
	Video standard:					
	PAL (default)					
	NTSC					
	Video output:					
		ALL CVBS and YC and RGB (default)				
	CVBS					
		YC				
	RGB					
	YUV PSCAN progressive scan					
Error	Number	Description				
	10100	Generating the test image succeeded.				
	10101	Invalid input was provided.				
	10102	The Chrysalis SYNC-module cannot be initialised.				
	10103	The Chrysalis MIXER-module cannot be initialised.				
	10104	The Chrysalis VPP-module cannot be initialised.				
	10105	The Chrysalis DENC-module cannot be initialised.				
Example	DS:> 101					
- Admirio	010100:					
	Test OK @					
	DS:> 101 0 pal cvbs					
	010100:					
	Test OK @					
		DS:> 101 4 ntsc yc				
	010100:					
	Test OK @					

Nucleus Name	DS_CHR_TestImageOff
Nucleus Number	102
Description	Switches the test-image off.
Technical	- Stop the DENC module.
Execution Time	Less than 1 second.
User Input	None
Error	Number Description
Example	10200 Stopping the test image generation succeeded
	10201 The Chrysalis DENC-module failed.
	DS:> 102
	010200:
	Test OK @

Nucleus Name	DS_CHR_Sine(DS_CHR_SineOn		
Nucleus Number	103	103		
Description	Generate an audio sine signal on the audio output of the digital board. Note: Left channel 6kHz, right channel 12 kHz sine. Make sure to route the signal fi			
Technical	- Set fifo p - Set the v - Set the d - Set the d - Configur - Configur - Put the A - Send 'pro	the analogue board parameters for audio colume 2S outputs and configuration paths lecoder mode e the DUET DSP e the PALM DSP AC3 audio in the fifo epare' command to the audio decoder ay' command to the audio decoder		
Execution Time	Less than 1 sec	Less than 1 second		
User Input	None	None		
Error	Number Description			

	10300	The sine signal was successfully generated
	10301	The analogue board could not be de-muted
	10302	The audio decoder did not initialise
	10303	The dsp2 of the audio decoder did not configure
	10304	The dsp1 of the audio decoder did not configure
	10305	There was a delay-error before starting
	10306	Wrong input was given to the decoder function
Example	DS:> 103 010300: Test OK @	

Nucleus Name	DS_CHR_SineOff		
Nucleus Number	104		
Description	Stop generating the audio sine signal		
Technical	- Reset the audio block of the Chrysalis		
Execution Time	Less than 1 second.		
User Input	None		
Error	Number	Description	
	10400	Switching off the audio sine signal succeeded	
Example	DS:> 104 010400: Test OK @		

Nucleus Name	DS_CHR_SineBurst		
Nucleus Number	105		
Description	Generate an audio sine signal on the audio output of the digital board for 4 seconds.		
	Note: Left channe	6kHz, right channel 12 kHz sine with some known hick-ups	
Technical	- Call the DS_CHR_SineOn nucleus - Delay for 4 seconds - Call the DS_CHR_SineOff nucleus		
Execution Time	4 seconds		
User Input	None		
Error	Number	Description	
	10500	The sine signal burst was successfully generated	
	10501	The delay did not succeed during the burst	
	10502	The audio sine could not be generated	
Example	DS:> 105 010500: Test OK @		

Nucleus Name	DS_CHR_MuteOn			
Nucleus Number	106			
Description	Mute the audio ou	Mute the audio outputs of the digital board		
Technical	- Send the 'Mute' command to the PALM DSP			
Execution Time	Less than 1 second.			
User Input	None			
Error	Number	Description		
	10600	Muting the audio succeeded		
Example	DS:> 106 010600: Test OK @			

Nucleus Name	DS_CHR_MuteOff			
Nucleus Number	107			
Description	De-mute the audi	De-mute the audio outputs of the digital board		
Technical	- Send the 'DeMute' command to the PALM DSP			
Execution Time	Less than 1 second.			
User Input	None			
Error	Number Description			
	10700	De-muting the audio succeeded		
Example	DS:> 107 010700: Test OK @			

Nucleus Name	DS_CHR_DvLedOn	
Nucleus Number	108	
Description	Check the connection to the DV-LED on the digital board by switching it on	
Technical	- Write to the	e PIO pin to light the DV LED
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	10800	Switching the DV-LED on succeeded
	10801	Switching the DV-LED on failed
Example	DS:> 108 010800: Test OK @	

Nucleus Name	DS_CHR_DvLedOff		
Nucleus Number	109		
Description	Switch off the DV-	LED on the digital board	
Technical	- Write to the	PIO pin to switch off the DV LED	
Execution Time	Less than 1 second.		
User Input	None		
Error	Number	Description	
	10900	Switching the DV-LED off succeeded	
	10901	Switching the DV-LED off failed	
Example	DS:> 109 010900: Test OK @		

Nucleus Name	DS_CHR_MacroVisionOn	
Nucleus Number	110	
Description	Turn on MacroVision.	
Technical	 Set some regist 	ers of the DENC module in the Chrysalis.
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	11000	Turning on MacroVision succeeded
	11001	Turning on MacroVision failed
Example	DS:> 110 011000: Test OK @	

Nucleus Name	DS_CHR_Macro	VisionOff
Nucleus Number	111	
Description	Turn off MacroVis	sion.
Technical	- Set some	registers of the DENC module in the Chrysalis.
Execution Time	Less than 1 secon	nd.
User Input	None	
Error	Number	Description
***************************************	11100	Turning off MacroVision succeeded
	11101	Turning off MacroVision failed
Example	DS:> 111 011100: Test OK @	

Nucleus Name	DS_CHR_Peek	
Nucleus Number	112	
Description	Peek a value on a	a specified address
Technical	Check the user input Read out the address specified Check whether the address to be read is aligned on 4 bytes	
Execution Time	Less than 1 second.	
User Input	The address to peek on	
Error	Number Description	
	11200	Peeking on the specified address succeeded
	11201	Peeking on the specified address failed, wrong user input

	11202	Peeking on the specified address failed due to misalignment
Example	DS:> 112 0xa07	00000
	011200: Value r	ead = 0x000001BD
	Test OK @	

Nucleus Name	DS_CHR_Poke	
Nucleus Number	113	
Description	Poke a value on	a specified address
Technical	 Check the user input Change the value on the address specified Check whether the address to be modified is aligned on 4 bytes 	
Execution Time	Less than 1 second.	
User Input	The address to poke and the value: <address><value></value></address>	
Error	Number	Description
	11300	Poking the specified address succeeded
-	11301	Poking the specified address failed, wrong user input
	11302	Poking the specified address failed due to misalignment
Example	DS:> 113 0xa0700000 0xaabbccdd 011300: Test OK @	

Nucleus Name	DS_CHR_INT_PICInterrupts	
Nucleus Number	114	
Description	Test all interrupts	of the priority interrupt controller
Technical	 Install interrupt handlers Generate interrupts Test whether all interrupts were received 	
Execution Time	Less than 1 second.	
User Input	•	
Error	Number	Description
	11400	Testing all the PIC interrupts succeeded
	11401	Testing all the PIC interrupts failed
Example	DS:> 114 011400: Test OK @	

Nucleus Name	DS_CHR_DMA_TestDMA		
Nucleus Number	115	115	
Description	Test the memory	to memory DMA transfer	
Technical	Create a block with known data in memory Copy this block to the consecutive area using 3 different DMAs Check whether all DMAs transferred the data properly		
Execution Time	Less than 2 seconds.		
User Input	-		
Error	Number	Description	
	11500	The testing of the DMAs succeeded	
	11501	The initialisation of the DMAs failed for one or more DMA	
	11502	One or more DMAs failed the test	
Example	DS:> 115 011500: Test OK @		

Boot EEPROM (BROM)

Nucleus Name	DS_BROM_Communication	
Nucleus Number	200	
Description	Check the communica PROM	tion between the IIC controller of the Chrysalis and the boot EE-
Technical	- Initialise IIC - Read something from the eeprom	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	20000	The data is properly read so the communication is OK
	20001	The IIC bus was not accessible

	20002	There was a timeout reading the device
	20003	The IIC acknowledge was not received
	20004	An IIC-bus error occurred
	20005	The IIC bus initialisation failed
	20006	An unexpected IIC error occurred
Example	DS:> 200 020000: Test OK @	

Nucleus Name	DS_BROM_WriteRead	
Nucleus Number	201	
Description	Check whether the	Boot EEPROM can be written to and read from
Technical	Initialise IIC Write something to the eeprom Read from the same location and check whether it is the same as written	
Execution Time	Less than 1 second	1.
User Input	None	
Error	Number	Description
	20100	The write-read test succeeded
	20101	The write-read test failed
	20102	An IIC-bus error occurred
	20103	There was a timeout reading the device
	20104	The IIC bus was not accessible
	20105	The IIC acknowledge was not received
	20106	Got unknown IIC bus error
	20107	The IIC bus initialisation failed
Example	DS:> 201 020100: Test OK @	

NVRAM

Nucleus Name	DS_NVRAM_Communication	
Nucleus Number	300	
Description	Check the commun	nication between the IIC controller of the Chrysalis and the EEPROM
Technical	- Initialise IIC - Read from a location in NVRAM	
Execution Time	Less than 1 secon	d.
User Input	None	
Error	Number	Description
	30000	Something is properly read so the communication is OK
	30001	The IIC bus was not accessible
	30002	There was a timeout reading the device
	30003	The IIC acknowledge was not received
	30004	The communication with the device failed
	30005	The IIC bus initialisation failed
Example	DS:> 300 030000: Test OK @	

Nucleus Name	DS_NVRAM_WriteRead	
Nucleus Number	301	
Description	Check whether th	ne EEPROM can be written to and read from
Technical	 Initialise IIC Backup data from location to modify Write to location and read it back again Write back the backed up data to the location to leave the nvram as found 	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	30100	The write-read test succeeded
	30101	The IIC bus could not be initialised
	30102	There was an NVRAM IO error
	30103	The value could not be read back from the NVRAM

Nucleus Name	DS_NVRAM_Clear	
Nucleus Number	302	
Description	Make the EEPRO	M empty, containing all zeroes.
Technical	Initialise IIC Create a memory block filled with zeroes Write this block to the NVRAM	
Execution Time	16 seconds	
User Input	None	
Error	Number	Description
	30200	The clearing of the NVRAM succeeded
	30201	There was an IIC error
	30202	Clearing the NVRAM failed
Example	DS:> 302 030200: Test OK @	

Nucleus Name	DS_NVRAM_Modify	
Nucleus Number	303	
Description	Modifies one or more locations in NVRAM and updates the checksum of the section modified	
Technical	Initialise IIC Decode user input Modify the NVRAM as indicated Validate the NVRAM by calculating the checksum and storing it	
Execution Time	Less than 1 secon	od .
User Input	The location that must be modified i.e. "ALL" "BOOT" "DIAGNOSTICS" "DOWNLOAD" "CONFIG" "RECORDER" or no string if an offset from the base address of the NVRAM is required The offset and data which to put on the selected location <offset> <length> <data></data></length></offset>	
Error	Number	Description
	30300	Modifying the NVRAM contents succeeded
	30301	Unable to initialise NVM
	30302	Modifying the NVRAM contents failed
	30303	length out of range
	30304	unable to decode length
	30305	offset out of range
	30306	unable to decode offset
	30307	unknown location specified
	30308	no location is specified
	30309	number of values incorrect
	30310	There was an IIC error
Example	DS:> 303 DIAGNOSTICS 5 1 0x5a 030300: Section is modified successfully Test OK @	

Nucleus Name	DS_NVRAM_Read	
Nucleus Number	304	
Description	Read out one or me	ore locations in the NVRAM
Technical	Initialise IIC Decode user input Read from the NVRAM and return this info to the user	
Execution Time	Less than 1 second	
User Input	1. The location which must be read i.e. "ALL" "BOOT" "DIAGNOSTICS" "DOWN LOAD" "CONFIG" "RECORDER" or no string if an offset from the base address of the NVRAM is required 2. The offset and number of bytes to read color: offset < length>	
Error	Number Description	
	30400	Value read
	30401 Unable to initialise NVM	

	30402	Reading the NVRAM contents failed	
	30403	length out of range	
	30404	unable to decode length	
	30405	offset out of range	
	30406	unable to decode offset	
	30407	unknown location specified	
	30408	no location is specified	
Example	304 DIAGNOST 030400: Value n Test OK @	ICS 0 6 ead = 0x00 0x00 0x00 0x00 0x00 0x5A	

SDRAM

Nucleus Name	DS_SDRAM_WriteRead	
Nucleus Number	400	
Description	Check all data line	es, address lines and memory locations of the SDRAM
Technical	- Test the databus - Test the addressbus - Test the integrity of the device itself (memory locations)	
Execution Time	11 seconds	
User Input	None	
Error	Number	Description
	40000	The write-read test succeeded
	40001	The data bus contains an error
	40002	The address bus contains an error
	40003	The SDRAM itself contains an error
Example	DS:> 400 040000: Test OK @	·

Nucleus Name	DS_SDRAM_WriteReadFast	
Nucleus Number	401	
Description	Check all data lin	es and address lines of the SDRAM
Technical	- Test the databus - Test the addressbus	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	40100	The write-read test succeeded
	40101	The data bus contains an error
	40102	The address bus contains an error
Example	DS:> 401 040100: Test OK @	

Nucleus Name	DS_SDRAM_Write	
Nucleus Number	402	
Description	Write to a specific	c memory address
Technical	Decode the user input and check its ranges and alignment on 4 bytes Write the data to the SDRAM	
Execution Time	Less than 1 seco	nd
User Input	The location that must be modified (SDRAM starts at address 0xA0000000) The value to put on the selected location	
Error	Number	Description
	40200	Writing to the SDRAM succeeded
	40201 Writing to the SDRAM failed; Wrong user input	
	40202	Address is not dividable by 4
Example	DS:> 402 0xa1000010 0xad112222 040200: Test OK @	

Nucleus Name	DS_SDRAM_Read
Nucleus Number	403
Description	Read from a specific memory address

Technical	Decode the user input and check the ranges Read from the SDRAM and return this info to the user	
Execution Time	Less than 1 secon	d
User Input	The location from which the data must be read (SDRAM starts at address 0xA0000000)	
Error	Number	Description
	40300	Reading from the SDRAM succeeded
	40301	Reading from the SDRAM failed; Wrong user input
	40302	Address is not dividable by 4
Example	DS:> 403 0xa1000010 040300: Value read = 0xAD112222 Test OK @	

FLASH

Nucleus Name	DS_FLASH_DevTypeGet	
Nucleus Number	500	
Description	Get the device (rev	ision) type information of the FLASH IC. (manufacturer and device ID)
Technical	Set the timing for the flash writing Write a command sequence to determine device type information Return the information to the user	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	50000	Getting the information from the FLASH succeeded
	50001	Getting the information from the FLASH failed
Example	DS:> 500 050000: Found FLASH memory: Manufacturer ID: 0x01 Device ID : 0x01 Test OK @	

Nucleus Name	DS_FLASH_WriteRead	
Nucleus Number	501	
Description	Check whether the F	LASH can be written to and read from
Technical	Find the test segment in flash Read the data into SDRAM Modify the data Write this data from SDRAM to FLASH and verify it by reading back again	
Execution Time	Less than 1 seconds.	
User Input	None	
Error	Number	Description
	50100	The FLASH write-read test succeeded
	50101	The test segment could not be found
	50102	All bits is the TEST region are filled with 0
	50103	The WriteRead test failed
	50104	The Write Failed
Example	DS:> 501 050100: Test OK @	

Nucleus Name	DS_FLASH_Read	
Nucleus Number	502	
Description	Read from a specif	fic memory address in FLASH
Technical	 Decode the user input and check the ranges and whether the address is aligned on 4 bytes Read the data and return this to the user 	
Execution Time	Less than 1 seconds.	
User Input	The location from which data must be read (FLASH starts at address 0xB8000000)	
Error	Number	Description
	50200	Reading the FLASH succeeded
	50201	Reading the FLASH failed; Wrong user input
	50202 Address is not dividable by 4	

Example	DS:> 502 0xb8000000
	050200: Value read = 0x3C08A000
	Test OK @

Nucleus Name	DS_FLASH_ChecksumProgram	
Nucleus Number	503	
Description	Check the checksum of the application partitions by recalculating and comparing partition checksums	
Technical	Determine the number of segments Find the application in each segment and determine its checksum Check whether the checksums stored match the newly calculated	
Execution Time	6 seconds	
User Input	None	
Error	Number	Description
	50300	The checksum is valid, the test succeeded
	50301	The checksum is invalid
Example	DS:> 503 050300: BootCode checksum is: 0xBABE5B6F, which is correct Diagnostics checksum is: 0xBABEBAFF, which is correct Download checksum is: 0xBABEEDBF, which is correct Application checksum is: 0xBABE8EEC, which is correct Test OK @	

Nucleus Name	DS_FLASH_CalculateChecksum	
Nucleus Number	504	
Description	Calculate the chec	ksum over all memory addresses. Used to check entire FLASH contents
Technical	- Run the checksum calculation algorithm all addresses	
Execution Time	6 seconds	
User Input	None	
Error	Number Description	
	50400	Calculating the checksum over all addresses succeeded
Example	DS:> 504 050400: The Checksum = 0xBABE30A4 Test OK @	

Nucleus Name	DS_FLASH_CalculateChecksumFast	
Nucleus Number	505	
Description	Calculate a checks	um over a selected number of address locations
Technical	- Run the checksum calculation algorithm on a selected number of addresses	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	50500	Calculating the checksum over selected addresses succeeded
Example	DS:> 505 050500: The Checksum = 0xBABEB064 Test OK @	

Video Input Processor (VIP)

Nucleus Name	DS_VIP_DevTypeGet	
Nucleus Number	600	
Description	Get the device (revision) ty	pe information of the VIP IC
Technical	Initialise IIC Read out the device (revision) type information of the VIP IC	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	60000	Getting the information from the VIP succeeded
	60001	The IIC bus initialisation failed
	60002	The was an error getting the information from the VIP
	60003	Type not according to type stored in HW diversity string
Example	DS:> 600 060000: Found SAA7118 Test OK @	

Nucleus Name	DS_VIP_Communication	
Nucleus Number	601	
Description	Check the commun	ication between the IIC controller of the chrysalis and the VIP IC
Technical	- Initialise IIC - Read data from a location in the VIP	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	60100	Communicating with the VIP succeeded
	60101	The IIC bus was not accessible
	60102	There was a timeout reading the device
	60103	The IIC acknowledge was not received
	60104	The communication with the device failed
	60105	The IIC bus initialisation failed
Example	DS:> 601 060100: Test OK @	

Nucleus Name	DS_VIP_ClockOutputOn	
Nucleus Number	602	
Description	Switch the clock ou	itput on
Technical	- Initialise IIC - Set the clock output through IIC	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	60200	Switching the clock output on succeeded
	60201	Switching the clock output on failed
Example	DS:> 602 060200: Test OK @	

Nucleus Name	DS_VIP_ClockOutputOff	
Nucleus Number	603	
Description	Switch the clock ou	utput off
Technical	- Initialise IIC - Reset the clock output through IIC	
Execution Time	Less than 1 second	d
User Input	None	
Error	Number	Description
	60300	Switching the clock output off succeeded
	60301	Switching the clock output off failed
Example	DS:> 603 060300: Test OK @	

Nucleus Name	DS_VIP_Selectinput		
Nucleus Number	604		
Description	Select an input video path to be switched to the analogue output pin (AOUT) of the VIP		
Technical - Check the user input - Initialise IIC - Read out the VIP id - Write the set of registers required for the input specified			
Execution Time	Less than 1 second		

User Input	The input to select, see	e table below.		
•	1 CVBS_Y_IN_A			
	2 CVBS OUT_B			
	3 CVBS_Y_IN_B			
	4 CVBS Y IN C			
	6 C IN			
	8 GIN	_		
	9 Y_IN			
	13 B_IN			
	14 U_IN			
	18 R_IN			
	19 V_IN			
Error	Number	Description		
	60400	Selecting the input of the VIP succeeded		
	60401	The user provided wrong input		
	60402	The VIP was not accessible		
Example	DS:> 604 1			
	060400:			
	Test OK @			

Digital Video Input Output (DVIO)

Nucleus Name	DS_DVIO_LinkDevTypeGet	
Nucleus Number	700	
Description	Get the device (revision) type information of the 1394 Link layer IC	
Technical	 Initialise the PIO pins on the chrysalis Read out the ID register 	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	70000	Getting the information from the link layer IC succeeded
	70001	Getting the information from the link layer IC failed
	70002	Type not according to type stored in HW diversity string
Example	DS:> 700 070000: Device type of the link layer IC: ffc00301 Test OK @	

Nucleus Name	DS_DVIO_LinkCommunication	
Nucleus Number	702	·
Description	Check the accessibility of the 1394 Link layer IC by writing to and reading from a specific address	
Technical	 Initialise the PIO pins of the chrysalis Write a pattern to the CYCTM register of the link chip Read back and verify the pattern 	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	70200	Communicating with the link layer IC succeeded
	70201	Communicating with the link layer IC failed
	70202	Result of nucleus not according to HW diversity string
Example	DS:> 702 070200: Test OK @	

Nucleus Name	DS_DVIO_PhyCommunication		
Nucleus Number	703		
Description	Check the accessibility of the 1394 Physical layer IC by writing to and reading from a sp cific address		
Technical	 Initialise the PIO pins of the chrysalis Initialise IIC Write the data to be written to the phy-chip to the link chip first Wait until the link chip indicates that the data has been written to the phy Write the phy-access register in the Link chip to indicate phy read access Wait until the link chip has obtained the value from the phy-chip Test whether the value read back equals the one previously written 		
Execution Time	Less than 1 second		
User Input	None		

EN 72 5. DVDR70 & DVDR75/0x1 Diagnostic Software

Error	Number	Description
	70300	Communicating with the physical layer IC succeeded
	70301	The physical layer IC was not accessible
	70302	Communicating with the physical layer IC failed
	70303	Result of nucleus not according to HW diversity string
Example	DS:> 703 070300: Test OK @	

Nucleus Name	DS_DVIO_Routing	
Nucleus Number	704	
Description	Route a DV stream containing an audio and video signal through the physical and link laye ICs to the Chrysalis	
Technical	- Initialise the DMA to transfer 5 frames PAL/NTSC - Initialise the DV demultiplexer - Initialise the 1394 interface and start reception of the DV stream - Check whether the stream was copied to memory properly by the byte input interface (port to memory type DMA)	
Execution Time	6-10 seconds (6 when OK, 10 when no stream or error)	
User Input	None, test works for both NTSC and PAL	
Error	Number	Description
	70400	Routing the signals succeeded
	70401	The 1394 link chip could not be initialised properly
	70402	There was a syntax error in the DV stream
	70403	DMA could not copy DV stream to memory. Stream connected?
	70404	DMA not working properly
Example	DS:> 704 070400: Test OK @	

Nucleus Name	DS_DVIO_DetectNe	ode	
Nucleus Number	705	705	
Description	Check whether a DV	node can be detected by the hardware	
Technical		 Initialise the 1394 interface Detect whether a node is in range 	
Execution Time	3 or 5 seconds (3 wi	3 or 5 seconds (3 when OK, 5 when no stream or error)	
User Input	None, test works for	None, test works for both NTSC and PAL	
Error	Number	Description	
	70500	The node was detected OK	
	70501	The 1394 link chip could not be initialised properly	
	70502	Unable to write to 1394 PHY chip	
	70503	Unable to read from 1394 PHY chip	
	70504	No node was detected	
Example	DS:> 705 070500: Test OK @		

Nucleus Name	DS_DVIO_DetectStream	
Nucleus Number	706	
Description	Check whether a DV stream can be detected by the hardware	
Technical	- Initialise the 1394 interface - Start receiving the stream - Detect whether the stream is OK	
Execution Time	3 or 5 seconds (3 when OK, 5 when no stream or error)	
User Input	None, test works for both NTSC and PAL	
Error	Number	Description
	70600	The stream was detected
	70601	The 1394 link chip could not be initialised properly
	70602	No stream detected
Example	DS:> 706 070600: Test OK @	

Progressive Scan (PSCAN)

Nucleus Name	DS_PSCAN_CommunicationDenc	
Nucleus Number	801	
Description	Check the communication between the IIC controller of the chrysalis and the progressive scan DENC-IC	
Technical	Initialise IIC Write data to a register of the DENC through IIC	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	80100	Communicating with the progressive scan DENC-IC succeeded
	80101	The IIC bus was not accessible
	80102	There was a timeout reading the device
	80103	The IIC acknowledge was not received
	80104	Communicating with the progressive scan DENC-IC failed
	80105	The initialisation of the IIC bus failed
	80106	The read data is not the same as the written data
	80107	No chip was expected
Example	DS:> 801 080100: Test OK @	

Nucleus Name	DS_PSCAN_TestimageOn	
Nucleus Number	802	
Description	Generate the test images that are present on the progressive scan IC.	
Technical	- See whether the user wanted a HATCH or a FRAME image pattern - Initialise the PIO pins of the chrysalis - Initialise IIC - Reset the DENC - Enable the 27Mhz clock - Send all settings for the pattern to the DENC through IIC	
Execution Time	Less than 1 second	
User Input	In case of ADV7196: When no input is given "HATCH" is the default -"HATCH" -"FRAME" Remark: "HATCH" is a crosshatch test pattern (horizontal and vertical white lines are displayed against a black background) "FRAME" is a uniform coloured frame/field test pattern (default white). In case of FLI2300: Nothing.	
Error	Number	Description
	80200	The generation of the test image succeeded
	80201	Unable to initialise pscan ic
	80202	Unable to reset DENC
	80203	Unable to generate image
	80204	No chip was expected
Example	DS:> 802 HATCH 080200: Test OK @	

Nucleus Name	DS_PSCAN_TestImageOff	
Nucleus Number	803	
Description	Switch off the gene	rated test image
Technical	Initialise IIC Send the default DENC settings to the DENC through IIC	
Execution Time	Less than 1 second	
User Input	None	
Error	Number Description	
· · · · · · · · · · · · · · · · · · ·	80300	Turning off the test image succeeded
	80301	Unable to initialise pscan ic
	80302	IIC Error during writing pscan ic
	80303 No chip was expected	

Example	DS:> 803	
	080300:	
	Test OK @	

Nucleus Name	DS_PSCAN_TestImageColourSettingsSet	
Nucleus Number	804	
Description	Set the colour of the hatch	or the frame-field to a different value than the default white
Technical	Determine which colour must be set. Initialise IIC. Enable 27 Mhz PSCAN Clock. Send all settings to the DENC through IIC.	
Execution Time	Less than 1 second.	
User Input	A colour string of one of the next non-case sensitive strings (WHITE, BLACK, RED, GREEN, BLUE, YELLOW, CYAN, MAGENTA) or Y Cr Cb (hexa-) decimal values.	
Error	Number	Description
	80400	Setting the new colour-settings succeeded
	80401	The user provided wrong input
	80402	Unable to initialise pscan ic
	80403	Unable to set colour
	80404	No chip was expected
Example	DS:> 804 yellow 080400: Test OK @ DS:> 804 0x6a 0xde 0xca 080400: Test OK @	

Nucleus Name	DS_PSCAN_TestImageColourSettingsGet	
Nucleus Number	805	
Description	Get the colour sett	ings of the hatch- or the frame- field.
Technical	Initialise IIC. Read the colour settings from the DENC through IIC.	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	80500	Getting the colour-settings succeeded
	80501	The progressive scan DENC-IC was not accessible through IIC
	80502	Unable to get colour
	80503	No chip was expected
Example	DS:> 805 080500: Colour Y Cr Cb values: 0xD2 0x92 0x10 Test OK @	

Nucleus Name	DS_PSCAN_Routing	
Nucleus Number	806	
Description	Route a video signal from the host processor through the progressive scan ICs to the progressive scan output of the set. Note: to route the progressive scan to the output of the set, first call nucleus 1112 with parameter 0 (video routing on analogue board).	
Technical	- Initialise the PIO pins of the chrysalis - Initialise IIC - Reset the DENC - Enable the 27Mhz clock - Send all settings to the DENC through IIC.	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	80600	Routing path is created successfully.
	80601	Unable to initialise the Chrysalis.
	80602	Unable to access DENC
	80603	Unable to access deinterlacer.
	80604	Wrong chips were expected.
Example	DS:> 806 080600: Test OK @	

Nucleus Name	DS_PSCAN_DevTypeGetDeinterlacer	
Nucleus Number	807	
Description	Get the device (revision	n) type information of the progressive scan deinterlacer.
Technical	 Initialise the deinterlacer. Read the version register of the deinterlacer. 	
Execution Time	1 second	
User Input	None	
Error	Number	Description
	80700	Everything went well.
	80701	The communication with the device failed
	80702	No chip was expected
Example	DS:> 807 080700: Chip name : 2300 Chip version : 1 Test OK @	

Nucleus Name	DS_PSCAN_CommunicationDeinterlacer	
Nucleus Number	808	
Description	Check the communication between the IIC controller of the chrysalis and the progressive scan Deinterlacer-IC	
Technical	Initialise IIC Set the video source synchronisation source to the Chrysalis Write data to the DENC through IIC	
Execution Time	Less than 1 secon	d
User Input	None	
Error	Number	Description
	80800	Communicating with the progressive scan Deinterlacer-IC succeeded
	80801	The IIC bus was not accessible
	80802	There was a timeout reading the device
	80803	The communication with the device failed (no ACK)
	80804	Communicating with the progressive scan Deinterlacer-IC failed
	80805	The initialisation of the IIC bus failed
-	80806	The data read back is not the same as the data written
	80807	No chip was expected
Example	DS:> 808 080800: Test OK @	

Basic Engine (BE)

Nucleus Name	DS_BE_CommunicationEcho	
Nucleus Number	900	
Description	Check the communication between the digital board and the basic engine by issuing ar echo command over the S2B interface	
Technical	- Send the ECHO command - Check if the BE returned the string 0x00 0xAA 0x55	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	90000	Communicating with the BE over the S2B interface succeeded
	90001	There was a time-out while communicating
	90002	The Basic Engine returned an unexpected result
-	90003	The Basic Engine returned an error code
	90004	No acknowledge received from BE
	90005	Communicating with the Basic Engine failed
	90006	Echo check failed, no echo received
	90007	Echo check failed, received wrong pattern
Example	DS:> 900 090000: Test OK @	

Nucleus Name	DS_BE_Reset	
Nucleus Number	901	
Description	Reset the basic eng	gine
Technical	- Toggle the r	eset pin of the I2S interface
Execution Time	2 seconds	
User Input	None	
Error	Number	Description
	90100	Resetting the Basic Engine succeeded
	90101	Resetting the Basic Engine failed
Example	DS:> 901 090100: Test OK @	

Nucleus Name	DS_BE_VersionGet	
Nucleus Number	903	
Description	Get the version of t	he basic engine and that of the optical unit
Technical	- Send the GET_VERSION_NUMBER command - Display the returned version	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	90300	BE version OK
	90301	There was a time-out while communicating
	90302	The Basic Engine returned an unexpected result
	90303	The BE returned an error code
	90304	No acknowledge received from BE
	90305	Communicating with the Basic Engine failed
	90306	The BE returned no info
Example	DS:> 903 090300: BE version = 20.09.18 Optical unit version = 3C.00.09.41.08 Test OK @	

Nucleus Name	DS_BE_GetSelftestResult	
Nucleus Number	902	
Description	Return the self-test	t results through the service port
Technical	- Send the GET_SELF_TEST_RESULT command - On error display the error received form the BE	
Execution Time	Less than 1 second	d
User Input	None	
Error	Number	Description
	90200	Self test succeeded, no errors
	90201	There was a time-out while communicating
	90202	The Basic Engine returned an unexpected result
	90203	The BE returned an error code
	90204	No acknowledge received from BE
	90205	Communicating with the Basic Engine failed
	90206	Basic Engine returned no info
	90207	Self test failed, errors are echoed
Example	DS:> 902 090200: Test OK @	

Nucleus Name	DS_BE_TrayOut	
Nucleus Number	904	
Description	Open the tray of th	e basic engine
Technical	- Send the TF	RAY_OUT command
Execution Time	Approximately 2 seconds	
User Input	None	
Error	Number	Description
	90400	The command executed successfully
	90401	There was a time-out while communicating
	90402	The Basic Engine returned an unexpected result
	90403	The BE returned an error code

	90404	No acknowledge received from BE
	90405	Unable to enter normal mode
	90406	Communicating with the Basic Engine failed
Example	DS:> 904 090400: Test OK @	

Nucleus Name	DS_BE_TrayIn	
Nucleus Number	905	
Description	Close the tray of the	e basic engine
Technical	- Send the TR	AY_IN command
Execution Time	Approximately 1 - 2	seconds
User Input	None	
Error	Number	Description
	90500	The command executed successfully
	90501	There was a time-out while communicating
	90502	The Basic Engine returned an unexpected result
	90503	The BE returned an error code
	90504	No acknowledge received from BE
	90505	Unable to enter normal mode
	90505	Communicating with the Basic Engine failed
Example	DS:> 905 090500: Test OK @	

Nucleus Name	DS_BE_WriteReadDvdRw		
Nucleus Number	906		
Description	Write data to and read data from a DVD+RW disc through the basic engine for verification of the writing		
Technical	- Execute DS_BE_GetSelftestResults - Send the TRAY_IN command - Send the READ_TOC command - Generate a random disc location - Generate test data to write to the DVD+RW - Transfer the test data to the disc location using DMA - Read back the data from disc using DMA - Compare the two data areas and check whether the areas are equal		
Execution Time	Approximately 20 seconds		
User Input	None		
Error	Number	Description	
	90600	The command executed successfully	
	90601	This nucleus cannot be executed because the Self-Test failed	
	90602	The BE cannot enter normal operating mode	
	90603	Unable to send the tray in	
	90604	Unable to read TOC from disc	
	90605	Invalid disc is loaded, please insert a DVD+RW disc	
	90606	Writing the test pattern to DVD+RW failed	
	90607	Reading back the test pattern from DVD+RW failed	
	90608	Compare check failed	
	90609	Calibrating DVD+RW failed	
Example	DS:> 906 090600: Testing on sector 0x5dbe0: OK Test OK @		

Nucleus Name	DS_BE_WriteReadDvdR
Nucleus Number	907
Description	Write data to and read data from a DVD+R disc through the basic engine for verification of the writing

Eventto DC I		
- Execute DS_BE_GetSelftestResults		
- Send the TRAY_IN command		
- Send the READ_TOC command		
	area to test if the DVD+R is (still) writable	
	data to write to the DVD+R	
	est data to the disc location using DMA	
	e data from disc using DMA	
- Compare the two data areas and check whether the areas are equal		
Approximately 20 se	conds	
None		
Number	Description	
90700	The command executed successfully	
90701	This nucleus cannot be executed because the Self-Test failed	
90702	The BE cannot enter normal operating mode	
90703	Unable to send the tray in	
90704	Unable to read TOC from disc	
90705	Invalid disc is loaded, please insert a DVD+RW disc	
90706	Unable to write, the DVD+R disc is full	
90707	No writable DVD+R sector found	
90708	Writing the test pattern to DVD failed	
90709	Reading back the test pattern from DVD failed	
90710	Compare check failed	
DS:> 907 090700: Testing on sector 0x36210: OK Test OK @		
	- Send the TRA - Send the REA - Use the OPC - Generate test - Transfer the t - Read back th - Compare the Approximately 20 se None Number 90700 90701 90702 90703 90704 90705 90706 90707 90708 90709 90710 DS:> 907 090700: Testing on s	

Nucleus Name	DS_BE_StatisticalInform	DS_BE_StatisticalInformationGet	
Nucleus Number	908		
Description	Retrieve the statistical info	ormation from the basic engine	
Technical	_	Send the GET_STATISTICAL_INFO command Display the info returned from the BE	
Execution Time	Less than 1 second		
User Input	None		
Error	Number	Description	
	90800	The command executed successfully	
	90801	There was a time-out while communicating	
	90802	The Basic Engine returned an unexpected result	
	90803	The BE returned an error code	
	90804	No acknowledge received from BE	
	90805	Communicating with the Basic Engine failed	
	90806	The BE returned no info	
Example	DS:> 908 Number of times Tray went Open/Closed : 4 Total minutes the CD laser was on : 0 Total minutes the DVD laser was on : 0 Total minutes the write laser was on : 0 090800: Test OK @		

Nucleus Name	DS_BE_StatisticalInformationReSet		
Nucleus Number	909		
Description	Reset the statistical	information in the basic engine	
Technical	Send the RESET_STATISTICAL_INFO command Send the POWER_DOWN command Toggle the reset pin of the I2S interface		
Execution Time	2 seconds		
User Input	None		
Error	Number	Description	
	90900	The command executed successfully	
	90901	There was a time-out while communicating	
	90902	The Basic Engine returned an unexpected result	
	90903	The BE returned an error code	
	90904	No acknowledge received from BE	
	90905	Communicating with the Basic Engine failed	

Example	DS:> 909	
	090900:	
	Test OK @	

Nucleus Name	DS_BE_ErrorLogGet	
Nucleus Number	910	
Description	Get the error log f	rom the basic engine
Technical	- Send the GET_ERROR command - Display the returned info	
Execution Time	Less than 1 secon	id .
User Input	None	
Error	Number	Description
	91000	The command executed successfully
	91001	There was a time-out while communicating
	91002	The Basic Engine returned an unexpected result
	91003	The BE returned an error code
	91004	No acknowledge received from BE
	91005	Communicating with the Basic Engine failed
	91006	The BE returned no info
Example	DS:> 910 Momentary errors (Byte 1 - Byte 7) : 0x00 0x00 0x00 0x00 0x00 0x00 0x00 Cumulative errors (Byte 1 - Byte 7) : 0x00 0x00 0x00 0x00 0x00 0x00 0x00 Fatal errors (Oldest - Youngest) : 0x00 0x00 0x00 0x00 0x00 091000: Test OK @	

Nucleus Name	DS_BE_ErrorLogReset	
Nucleus Number	911	
Description	Reset the error log	in the basic engine
Technical	- Send the RESET_STATISTICAL_INFO command - Send the POWER_DOWN command - Toggle the reset pin of the I2S interface	
Execution Time	2 seconds	
User Input	None	
Error	Number	Description
	91100	The command executed successfully
	91101	There was a time-out while communicating
	91102	The Basic Engine returned an unexpected result
	91103	The BE returned an error code
	91104	No acknowledge received from BE
	91105	Communicating with the Basic Engine failed
Example	DS:> 911 091100: Test OK @	

Nucleus Name	DS_BE_JitterOpti	DS_BE_JitterOptimise	
Nucleus Number	912		
Description	Perform jitter optim A formatted DVD n	isation: nust be loaded into the engine before executing this nucleus	
Technical	- Send the TRAY_IN command - Send the READ_TOC command - Send the JITTER_COMMAND command with parameter 0x00 0x00 - Send the JITTER_COMMAND command with parameter 0x00 0x01 - Send the JITTER_COMMAND command with parameter 0x00 0x02 until offset 0x80 is received		
Execution Time	Approximately 20 s	Approximately 20 seconds	
User Input	none		
Error	Number	Description	
	91200	Optimising jitter succeeded	
	91201	There was a time-out while communicating	
	91202	The Basic Engine returned an unexpected result	
	91203	The Basic Engine returned an error code	
	91204	No acknowledge received from BE	
	91205	Unable to send tray in	
	91206	Unable to read the disc	

	91207	No disc is loaded	
	91208	Unknown disc is loaded	
	91209	Unable to enter service mode	
Example	DS:> 912		
•	Test OK @		

Nucleus Name	DS_BE_FocusOn		
Nucleus Number	913	913	
Description	Put the laser of the	BE into focus	
Technical	- Send the FC	OCUS command with parameter 0x01	
Execution Time	3 seconds		
User Input	None		
Error	Number Description		
	91300	Focus on succeeded	
	91301	There was a time-out while communicating	
	91302	The Basic Engine returned an unexpected result	
	91303	The BE returned an error code	
	91304	No acknowledge received from BE	
	91305	Communicating with the Basic Engine failed	
	91306	Unable to enter service mode	
Example	DS:> 913 091300: Test OK @		

Nucleus Name	DS_BE_FocusOff	
Nucleus Number	914	
Description	Turn off putting the	laser of the BE into focus
Technical	- Send the FC	OCUS command with parameter 0x00
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	91400	Focus off succeeded
	91401	There was a time-out while communicating
	91402	The Basic Engine returned an unexpected result
	91403	The BE returned an error code
	91404	No acknowledge received from BE
	91405	Communicating with the Basic Engine failed
	91406	Unable to enter service mode
Example	DS:> 914 091400: Test OK @	

Nucleus Name	DS_BE_MotorOn		
Nucleus Number	915	915	
Description	Turn on the turntab	le motor	
Technical	- Send the TU	JRN_TABLE_MOTOR_ON command	
Execution Time	Less than 1 second	i .	
User Input	None		
Error	Number	Description	
	91500	Turn table motor is on	
	91501	There was a time-out while communicating	
	91502	The Basic Engine returned an unexpected result	
	91503	The BE returned an error code	
	91504 No acknowledge received from BE		
	91505	Communicating with the Basic Engine failed	
	91506	Unable to enter service mode	
Example	DS:> 915 091500: Test OK @		

Nucleus Name	DS_BE_MotorOff
Nucleus Number	916
Description	Turn off the turntable motor

Technical	- Send the TURN_TABLE_MOTOR_OFF command	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	91600	Turn table motor is off
	91601	There was a time-out while communicating
	91602	The Basic Engine returned an unexpected result
	91603	The BE returned an error code
· · · · · · · · · · · · · · · · · · ·	91604	No acknowledge received from BE
	91605	Communicating with the Basic Engine failed
	91606	Unable to enter service mode
Example	DS:> 916 091600: Test OK @	

Nucleus Name	DS_BE_RadialOn		
Nucleus Number	917		
Description	Close the radial loop		
Technical	- Send the TRAY_IN command - Send the READ_TOC command - Send the RADIAL_COMMAND command with parameter 0x00 0x01		
Execution Time	Approximately 10 ñ 1	5 seconds	
User Input	A formatted DVD mus	st be loaded into the engine before executing this nucleus	
Error	Number Description		
	91700	Radial loop is close	
	91701	There was a time-out while communicating	
	91702	The Basic Engine returned an unexpected result	
	91703	The Basic Engine returned an error code	
	91704	No acknowledge received from BE	
	91705	Unable to send tray in	
	91706	Unable to read the disc	
	91707	No disc is loaded	
	91708	Unknown disc is loaded	
	91709	Unable to enter service mode	
Example	DS:> 917 091700: Test OK @		

Nucleus Name	DS_BE_RadialOff		
Nucleus Number	918		
Description	Open the radial loop		
Technical	- Send the RA	DIAL_COMMAND command with parameter 0x00 0x00	
Execution Time	1 second if radial lo	op is open otherwise 3 seconds	
User Input	None		
Error	Number	Description	
	91800	Radial loop is open	
	91801	There was a time-out while communicating	
	91802	The Basic Engine returned an unexpected result	
	91803	The BE returned an error code	
	91804	No acknowledge received from BE	
	91805	Communicating with the Basic Engine failed	
	91806	Unable to enter service mode	
Example	DS:> 918 091800: Test OK @		

Nucleus Name	DS_BE_RadialCalibration	
Nucleus Number	919	
Description	Calibrate the radial loop	
Technical	- Send the TRAY_IN command - Send the READ_TOC command - Send the RADIAL_COMMAND command with parameter 0x03 0x05 - Send the RADIAL_COMMAND command with parameter 0x03 0x06 - Send the RADIAL_COMMAND command with parameter 0x03 0x09	

Execution Time	Approximately 15 seconds	
User Input	A formatted DVD must be loaded into the engine before executing this nucleus	
Error	Number	Description
	91900	The command executed successfully
	91901	There was a time-out while communicating
	91902	The Basic Engine returned an unexpected result
	91903	The Basic Engine returned an error code
	91904	No acknowledge received from BE
	91905	Unable to send tray in
	91906	Unable to read the disc
	91907	No disc is loaded
	91908	Unknown disc is loaded
	91909	Unable to enter service mode
Example	DS:> 919 091900: Test OK @	

Nucleus Name	DS_BE_Titt		
Nucleus Number	920		
Description	Test the tilt mechanism control loop, or allow its proper functioning to be measured. Before executing this nucleus a disc must be loaded into the recorder		
Technical	- Send the TRAY_IN command - Send the READ_TOC command - Send the TILT_COMMAND command with parameter 0x00 0x00 - Send the TILT_COMMAND command with parameter 0x00 0x01 - Send the TILT_COMMAND command with parameter 0x00 0x02		
Execution Time	Approximately 15 sec	onds	
User Input	None		
Error	Number	Description	
	92000	The command executed successfully	
	92001	There was a time-out while communicating	
	92002	The Basic Engine returned an unexpected result	
	92003	The Basic Engine returned an error code	
	92004	No acknowledge received from BE	
	92005	Unable to send tray in	
	92006	Unable to read the disc	
	92007	No disc is loaded	
	92008	Unknown disc is loaded	
	92009	Unable to enter service mode	
Example	DS:> 920 092000: Tilt sensor bathtub: (71,-12,145)(68,-12,135)(62,-10,120)(56,-92,97)(50,-75,86) (44,-59,80)(41,-52,80)(35,-37,86)(29,-22,86) (23,-7,92)(17,8,111)(11,23,135)(8,31,138)(5,39,158) Test OK @		

Nucleus Name	DS_BE_CheckDisc	
Nucleus Number	921	
Description	Check whether ther	e is a disc inside the BE
Technical	- Send the TRAY_IN command - Send the READ_TOC command - Display the Disc type info	
Execution Time	Approximately 15 seconds	
User Input	None	
Error	Number	Description
	92100	There was a disc inside the set
	92101	A disc is loaded, disc type info if echoed
	92102	Unable to load the tray
	92103	Error received from BE
Example	DS:> 921 092100: A DVD+Rewritable is loaded (disc is empty or partially recorded) Test OK @ DS:> 921 092100: No Disc is loaded Test OK @	

Nucleus Name	DS_BE_SledgeMotor		
Nucleus Number	922		
Description	Send the sledge to its home position, then to the middle of the disc, and then to the end.		
Technical	- Send the PCS_COMMAND command with parameter 0x03 0x00 - Send the PCS_COMMAND command with parameter 0x02 0x00 - Send the PCS_COMMAND command with parameter 0x00 0x01 - Send the PCS_JUMP_SLEGE_STEPS command for 3 times - Send the PCS_COMMAND command with parameter 0x00 0x00		
Execution Time	4 seconds		
User Input	None		
Error	Number	Description	
	92200	The command executed successfully	
	92201	There was a time-out while communicating	
	92202	The Basic Engine returned an unexpected result	
	92203	The BE returned an error code	
	92204	No acknowledge received from BE	
	92205	Communicating with the Basic Engine failed	
	92206	Unable to enter service mode	
Example	DS:> 922 092200: Test OK @		

Display and Control Board (DCB)

Nucleus Name	DS_DCB_CommunicationEcho	
Nucleus Number	1000	
Description	Check the communication between the digital board and the DCB by issuing an echo command	
Technical	- Send an echo cor	mmand to the DCB via the analogue board and wait for the result
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	100000	Communicating with the DCB succeeded
	100001	The DCB could not be accessed by the analogue board.
	100002	There was no response from the analogue board.
	100003	The returned errorcode from the analogue board is un- known
	100004	Something went wrong with the error code.
Example	DS:> 1000 100000: Test OK @	

Nucleus Name	DS_DCB_VersionGet	
Nucleus Number	1001	
Description	Get the version of the DCE	3
Technical	- Issue the DCB version ge	et command to the analogue board and wait for the result
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	100100	Retrieving the version of the DCB succeeded
	100101	The DCB could not be accessed by the analogue board.
	100102	There was no response from the analogue board.
	100103	The returned errorcode from the analogue board is unknown
	100104	Something went wrong with the error code.
Example	DS:> 1001 100100: DCB version: 13 Test OK @	

Nucleus Name	DS_DCB_LightDisplay
Nucleus Number	1002
Description	Light the entire display of the DCB, and clear the display after confirmation. User confirmation is necessary.

Technical	First issue a command to clear the display and wait for the result Then issue the command to light the entire display and wait for confirmation by the		
	user		
Execution Time	Until user confirmation.		
User Input	None		
Error	Number	Description	
	100200	Lighting the entire display succeeded	
	100201	The DCB could not be accessed by the analogue board.	
	100202	There was no response from the analogue board.	
	100203	The returned errorcode from the analogue board is un- known	
	100204	The DCB could not be accessed by the analogue board.	
	100205	There was no response from the analogue board.	
	100206	The DCB did not light all labels.	
	100207	The user skipped the rest of the DCB_Light_Display test.	
	100208	The user returned an unknown confirmation:	
	100209	The returned errorcode from the analogue board is un- known	
Example	DS:> 1002 100200: Test OK @		

Nucleus Name	DS_DCB_Keyboard	
Nucleus Number	1004	
Description	Check all keys of the key	yboard by confirming the key-code displayed of each key.
Technical	- Initialise the display - Display the key pressed by the user on the display - Monitor the service port for an abort and get the next key pressed - Update the display and repeat previous steps until user stops / confirms	
Execution Time	Until user confirmation.	
User Input	None	
Error	Number	Description
	100400	All the keys on the keyboard have been pressed
	100401	DCB Keyboard; test failed
	100402	DCB Keyboard; test aborted
	100403	Not all the keys were pressed.
	100404	The DCB could not be accessed by the analogue board.
Example	DS:> 1004 100400: Test OK @	

Nucleus Name	DS_DCB_RemoteControl	
Nucleus Number	1005	
Description	Check the interface between the remote control and the DCB by checking the key- code displayed	
Technical	Initialise the display Display the key pressed by the user on the display Monitor the service port for an abort and get the next key pressed Update the display and repeat previous steps until user stops / confirms	
Execution Time	Until user confirmation.	
User Input	None	
Error	Number	Description
	100500	Remote Control test succeeded
	100501	DCB Remote control; test failed
	100502	DCB Remote control; test aborted
	100503	The DCB could not be accessed by the analogue board.
	100504	DCB Remote control; no user input received
Example	DS:> 1005 100500: Test OK @	

Nucleus Name	DS_DCB_Led	
Nucleus Number	1006	

Description	Switch the record LED on, and after confirmation off. The user confirms by pressing the REC key, STOP key, or the PLAY key on the lockeyboard. The PLAY key confirms that the LED is on and the REC key	
•		
Technical	 Issue the command to light the record LED via the analogue board and wait for confirmation by the user 	
Execution Time	Until user confirmat	ion.
User Input	None	
Error	Number	Description
	100600	Switching Led on succeeded
	100601	The DCB could not be accessed by the analogue board.
	100602	There was no response from the analogue board.
	100603	The DCB did not light the record LED.
	100604	The user skipped the rest of the DCB_Led test.
	100605	The user returned an unknown confirmation:
	100606	The returned errorcode from the analogue board is un- known
Example	DS:> 1006 100600: Test OK @	·

Analogue Board (ANAB)

Nucleus Name	DS_ANAB_CommunicationEcho	
Nucleus Number	1100	
Description	Check the communication between the digital board and the analogue board by issuing some echo string.	
Technical	Send command P_DS_ANACOM_ECHO with the parameter string "Hello Analogue board" to the analogue board and read back the result	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	110000	Communicating with the analogue board succeeded
	110001	The test returned the wrong string Communicating with the analogue board failed
	110002	The analogue board returned an unexpected result
	110103	The analogue board rotation art anothers are
Example	DS:> 1100 110000: Hello Ana Test OK @	alogue Board

Nucleus Name	DS_ANAB_CommunicationlicNvram	
Nucleus Number	1101	
Description	Check the communication between the digital board and the NVRAM on the analogue board.	
Technical	Send command P_DS_ANACOM_NVRAM with no parameters to the analogue board and read back the result	
Execution Time	Less than 3 seconds	
User Input	None	
Error	Number	Description
	110100	Communicating with the NVRAM on the analogue board succeeded
	110101	The analogue board could not communicate with the NVRAM
	110102	Communicating with the analogue board failed
	110103	The analogue board returned an unexpected result
Example	DS:> 1101 110100: Test OK @	

Nucleus Name	DS_ANAB_CommunicationlicTuner		
Nucleus Number	1102		
Description	Check the communication between the digital board and the tuner on the analogu board		
Technical	Send command P_DS_ANACOM_TUNER with no parameters to the analogue bo and read back the result		
Execution Time	Less than 1 second		
User Input	None		

Error	Number	Description
	110200	Communicating with the tuner on the analogue board succeeded
	110201	The analogue board could not communicate with the tuner
	110202	There was an error communicating with the analogue board
	110203	The analogue board returned an unexpected result
Example	DS:> 1102 110200: Test OK @	

Nucleus Name	DS_ANAB_CommunicationlicDataSlicer	
Nucleus Number	1103	
Description	Check the communication between the digital board and the data slicer on the ana logue board	
Technical	Send command P_DS_ANACOM_DATA_SLICER with no parameters to the ana logue board and read back the result	
Execution Time	Less than 1 second	d
User Input	None	
Error	Number	Description
	110300	Communicating with the data slicer on the analogue board succeeded
	110301	The analogue board could not communicate with the data slicer
	110302	There was an error communicating with the analogue board
	110303	The analogue board returned an unexpected result
Example	DS:> 1103 110300: Test OK @	

Nucleus Name	DS_ANAB_CommunicationlicSoundProcessor	
Nucleus Number	1104	
Description	Check the communication between the digital board and the sound processor on the analogue board	
Technical	Send command P_DS_ANACOM_SOUND_PROCESSOR with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 second	
User Input	None	
Error	Number Description	
	110400	Communicating with the sound procesor on the analogue board succeeded
	110401	The analogue board could not communicate with the sound processor
	110402	There was an error communicating with the analogue board
	110403	The analogue board returned an unexpected result
Example	DS:> 1104 110400: Test OK @	

Nucleus Name	DS_ANAB_CommunicationlicAVSelector		
Nucleus Number	1105		
Description	Check the communication between the digital board and the A/V-selector on the analogue board		
Technical	Send command P_DS_ANACOM_AV_SELECTOR with no parameters to the analogue board and read back the result		
Execution Time	Less than 1 secon	Less than 1 second	
User Input	None		
Error	Number	Description	
	110500	Communicating with the A/V selector on the analogue board succeeded	
	110501	The analogue board could not communicate with the A/V selector	

	110502	There was an error communicating with the analogue board
	110503	The analogue board returned an unexpected result
Example	DS:> 1105 110500: Test OK @	

Nucleus Name	DS_ANAB_HardwareVersionGet	
Nucleus Number	1106	
Description	Get the hardware	version of the analogue board
Technical	Send command P_DS_ANACOM_HARDWARE_VERSION with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 second	
User input	None	
Error	Number	Description
	110600	Reading the hardware version succeeded
·	110601	The segment containing the hardware version could not be found
	110602	There was an error communicating with the analogue board
	110603	The analogue board returned an unexpected result
Example	DS:> 1106 110600: Analogue hardware version : 11 Test OK @	

Nucleus Name	DS_ANAB_SoftwareVersionBootGet	
Nucleus Number	1107	
Description	Get the software v	ersion of the boot software of the analogue board
Technical	Send command P_DS_ANACOM_SOFTWARE_VERSION with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 secon	nd
User Input	None	
Error	Number	Description
	110700	Reading the boot-software version succeeded
	110701	The segment containing the boot-software version could not be found
	110702	There was an error communicating with the analogue board
	110703	The analogue board returned an unexpected result
Example	DS:> 1107 110700: Bootcode application version : 11.00.11 Test OK @	

Nucleus Name	DS_ANAB_SoftwareVersionDownloadGet	
Nucleus Number	1108	
Description	Get the software v	ersion of the download software of the analogue board
Technical		DS_ANACOM_SW_VERSION_DOWN with no parameters to the not read back the result
Execution Time	Less than 1 secon	d
User Input	None	
Error	Number	Description
	110800	Reading the download-software version succeeded
	110801	The segment containing the download-software version could not be found
	110802	There was an error communicating with the analogue board
	110803	The analogue board returned an unexpected result
Example	DS:> 1108 110800: Download application version : 11.00.06 Test OK @	

Nucleus Name	DS_ANAB_SoftwareVersionApplGet
Nucleus Number	1109
Description	Get the software version of the application software of the analogue board

Technical	Send command P_DS_ANACOM_SW_VERSION_APPL with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	110900	Reading the application-software version succeeded
	110901	The segment containing the application-software version could not be found
	110902	There was an error communicating with the analogue board
	110903	The analogue board returned an unexpected result
Example	DS:> 1109 110900: Recorder application version : 11.00.23 Test OK @	

Nucleus Name	DS_ANAB_SoftwareVersionDiagnosticsGet	
Nucleus Number	1110	
Description	Get the software v	ersion of the diagnostic software of the analogue board
Technical	Send command P_DS_ANACOM_SW_VERSION_DIAG with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 secon	d
User Input	None	
Error	Number	Description
	111000	Reading the diagnostics-software version succeeded
	111001	The segment containing the diagnostics-software version could not be found
	111002	There was an error communicating with the analogue board
	111003	The analogue board returned an unexpected result
Example	DS:> 1110 111000: Diagnostics application version : 11.00.13 Test OK @	

Nucleus Name	DS_ANAB_ChecksumProgram		
Nucleus Number	1111		
Description	Check the checksum of the several partitions by recalculating and comparing partition checksums		
Technical	Send command P_DS_ANACOM_FLASH_CHECKSUM with no parameters to the analogue board and read back the result		
Execution Time	Less than 5 seconds		
User Input	None		
Error	Number	Description	
	111100	Checksum calculation succeeded	
	111101	The FLASH was not accessible	
	111102	The checksum stored in FLASH is not correct	
	111103	There was an error communicating with the analogue board	
	111104	The analogue board returned an unexpected result	
Example	DS:> 1111 BootCode checksum is: 0xBABE6240, which is correct Diagnostics checksum is: 0xBABEBEAD, which is correct Download checksum is: 0xBABEA6B7, which is correct Application checksum is: 0xBABEB277, which is correct 111100: Test OK @		

Nucleus Name	DS_ANAB_VideoRouting		
Nucleus Number	1112		
Description	Perform the routing of the video paths on the analogue board		
Technical	Send command P_DS_ANACOM_ROUTE_VIDEO with parameters to the analogue board and read back the result		
Execution Time	Less than 1 second		
User Input	The user has to input the correct parameter for the routing (see table 'video routing' below).		
Error	Number	Description	

	111200	Routing the video on the analogue board succeeded
	111201	Routing the video on the analogue board failed
	111202	The user provided wrong input
	111203	There was an error communicating with the analogue board
	111204	The analogue board returned an unexpected result
Example	DS:> 1112 00 111200: Test OK @	

Nucleus Name	DS_ANAB_AudioRouting		
Nucleus Number	1113		
Description	Perform the routing	of the audio paths on the analogue board	
Technical	Send command P_DS_ANACOM_ROUTE_AUDIO with parameters to the analogue board and read back the result		
Execution Time	Less than 1 second		
User Input	The user has to input the correct parameter for the routing (see table 'audio routing below)		
Error	Number	Description	
	111300	Routing the audio on the analogue board succeeded	
	111301	Routing the audio on the analogue board failed	
	111302	The user provided wrong input	
	111303	There was an error communicating with the analogue board	
	111304	The analogue board returned an unexpected result	
Example	DS:> 1113 00 111300: Test OK @		

Nucleus Name	DS_ANAB_SelectTunerChannel			
Nucleus Number	1114			
Description	Set the tuner to receive a valid audio and video signal			
Technical	Send command P_DS_ANACOM_TUNER_FREQ_SELECT with parameters to the analogue board and read back the result			
Execution Time	Less than 1 second	d Total		
User Input	<frequency*16> <video id="" standard=""> Tuner frequency: to tune the tuner to e.g. 216 MHz, this parameter must be 3456. (Since 216*16 = 3456. This is to avoid the decimal points to the parameter list.) Video standard id: The table below shows which video standards are possible</video></frequency*16>			
	Video standard id		Europe	NAFTA
	16		PAL_BG	NTSC
	32		PAL_I	Invalid
	48		PAL_DK	Invalid
	64 80		SEC_L	Invalid
	96		SEC_LS	Invalid
	112		SEC_BG	Invalid
		•	SEC_DK	Invalid
Error	Number	Description		
	111400	Setting the tu	ner channel succeed	led
	111401	Setting the tu	Setting the tuner channel failed	
	111402	The user prov	The user provided wrong input	
	111403 There was an error communicating with the a board		ting with the analogue	
	111404	The analogue	board returned an u	inexpected result
Example	DS:> 1114 3456 16 111400: Test OK @			

Nucleus Name	DS_ANAB_IICWriteRead
Nucleus Number	1115
Description	Perform an IIC write and read action on the analogue board
Technical Send command P_DS_ANACOM_I2C_WRR with parameters to the analogand read back the result	
Execution Time	Less than 1 second

User Input	Writing:	Writing:		
		[<w>I<w>] [I2C address] [number of data bytes to write]</w></w>		
	with	Max 16 data bytes (n < 16).		
	Reading:	Max 10 data bytes (11 < 10).		
	[<r> <r>) [I2C add</r></r>	[<r>I<r>] [I2C address] [number of data bytes to read] Max 16 data bytes (n < 16).</r></r>		
Error	Number	Description		
	111500	Reading and writing IIC on the analogue board succeeded		
	111501	The user provided wrong input		
	111502	Reading and writing IIC on the analogue board failed		
	111503	There was an error communicating with the analogue board		
	111504	The analogue board returned an unexpected result		
Example	DS:> 1115 w 0x94 2 0x06 0x02 111500: Test OK @			

Nucleus Name	DS_ANAB_ClockAdjust		
Nucleus Number	1116		
Description	Set the clock to the	e value passed through in the YYYY MM DD HH MM SS format	
Technical	Send command P_ board and read ba	_DS_ANACOM_CLOCK_ADJUST with parameters to the analogue ck the result	
Execution Time	Less than 1 secon	d	
User Input	<yyyy> <mm> <e< td=""><td>DD> <hh> <mm> <ss></ss></mm></hh></td></e<></mm></yyyy>	DD> <hh> <mm> <ss></ss></mm></hh>	
Error	Number	Description	
	111600	Adjusting the clock succeeded	
	111601	Adjusting the clock failed	
	111602	The user provided wrong input	
	111603	There was an error communicating with the analogue board	
	111604	The analogue board returned an unexpected result	
Example	DS:> 1116 2002 1 111600: Test OK @	1 11 11 11	

Nucleus Name	DS_ANAB_ClockReference		
Nucleus Number	1117		
Description	Generate a 1 kHz	signal on pin 7 (INT) of the clock IC	
Technical	Send command P_DS_ANACOM_CLOCK_REFERENCE with no parameters to the analogue board and read back the result		
Execution Time	Less than 1 second		
User Input	None		
Error	Number	Description	
	111700	Generating the signal on the designated pin succeeded	
	111701	Generating the signal on the designated pin failed	
	111702	There was an error communicating with the analogue board	
	111703	The analogue board returned an unexpected result	
Example	DS:> 1117 111700: Test OK @		

Nucleus Name	DS_ANAB_ClockCorrection		
Nucleus Number	1118		
Description	Store the clock IC	correction value in NVRAM	
Technical	Send command P_DS_ANACOM_CLOCK_CORRECTION with parameters to the an- alogue board and read back the result		
Execution Time	Less than 1 second		
User Input	The correction value for the clock		
Error	Number Description		
	111800	Storing the correction value for the clock in NVRAM succeeded	
	111801	Storing the correction value for the clock in NVRAM failed	
	111802	Value out of range: default value stored	

Nucleus Name	DS_ANAB_TunerAFCReferenceVoltage		
Nucleus Number	1119		
Description	4.1. • • • • •	e voltage for the tuner in NVRAM	
Technical	Send command P_DS_ANACOM_AFC_REFERENCE_TUNER with no parameters to the analogue board and read back the result		
Execution Time	Less than 1 second	d	
User Input	The reference volta	age, between 0 and 255	
Error	Number	Description	
	111900	Storing the reference voltage for the tuner in NVRAM succeeded	
	111901	Storing the reference voltage for the tuner in NVRAM failed	
	111902	The user provided wrong input	
	111903	There was an error communicating with the analogue board	
	111904	The analogue board returned an unexpected result	
Example	DS:> 1119 5 111900: Test OK @		

Nucleus Name	DS_ANAB_TunerFrequencyDownload		
Nucleus Number	1120		
Description	Store the frequency table in NVRAM. The frequency table is passed through the error- string provided to the nucleus.		
Technical	Send command P_DS_ANACOM_FREQ_DOWNLOAD with parameters to the ana- logue board and read back the result		
Execution Time	Less than 3 secon	ds	
User Input	See frequency table		
Error	Number	Description	
	112000	Downloading the frequency table in NVRAM succeeded	
	112001	Downloading the frequency table in NVRAM failed	
	112002	The user provided wrong input	
	112003	There was an error communicating with the analogue board	
	112004	The analogue board returned an unexpected result	
Example	DS:> 1120 2233 00 02 4E45442031 112000: Test OK @		

Nucleus Name	DS_ANAB_StoreExternalPresets	
Nucleus Number	1121	
Description	Store the external presets in NVRAM	
Technical	Send command P_DS_ANACOM_STORE_EXT_PRESETS with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	112100	Storing the external presets in NVRAM succeeded
	112101	Storing the external presets in NVRAM failed
	112102	There was an error communicating with the analogue board
	112103	The analogue board returned an unexpected result
Example	DS:> 1121 112100: Test OK @	

Nucleus Name	DS_ANAB_BargraphLevelAdjust
Nucleus Number	1122

Description	Measure the audio signal corresponding to 0dB per channel and store it as correction value in NVRAM	
Technical	Send command P_DS_ANACOM_BARGRAPH_LEVEL_ADJUSTMENT with no parameters to the analogue board and read back the result	
Execution Time	Less than 1 second	
User Input	none	
Error	Number	Description
	112200	Storing the bargraph adjustment values in NVRAM succeeded
	112201	Storing the bargraph adjustment values in NVRAM failed
	112202	There was an error communicating with the analogue board
	112203	The analogue board returned an unexpected result
Example	DS:> 1122 112200: Test OK @	

Video routing paths (Europe)

Path ID	Description		
Ö	Input signal is VIDEO(CVBS) from digital board and will be re-routed back to the digital board.		
1	Input signal is from FRONT VIDEO(CVBS) IN and will be routed to the digital board.		
2	No Routing.		
3	Input signal is from FRONT S-VIDEO(Y/C) and will be routed to the digital board.		
4	No Routing.		
5	Input signal is CVBS from SCART1 and will be routed to the digital board.		
6	Input signal is CVBS from SCART2 and will be routed to the digital board.		
7	Input Signal is CVBS from Digital Board and it will be routed to Scart1 and Scart2.		
8	Input signal is VIDEO(CVBS) from ANTENNA IN and will be routed to SCART2.		
9	Input signal is VIDEO(CVBS) from SCART1 and will be routed to SCART2.		
10	Input signal is VIDEO(CVBS) from SCART2 and will be routed to SCART1.		
11	Signal path is routed Fast Blank from Scart2 pin16 and will be routed SCART1 pin16		
12	Input Signal is YC from Digital Board and it will be routed to SCART1.		
13			
14	No Routing.		
15	Input Signal is CVBS from TUNER and it will be routed to Digital .		
16	No Routing.		
17	Input Signal is routed from digital board YC to REAR S-VIDEO(YC) OUT		
18	Signal path is routed from digital board RGB to RGB SCART1 and from digital board CVBS to digital board CVBS.		
19	No Routing.		
20	Input RGB Signal is routed from Digital Board to SCART1(RGB),Input CVBS Signal from Digital Board to Digital Board and Fast Blanking Signal from SCART2 to SCART1.		
21	Input Y/C Signal from Digital Board is routed to Rear Y/C Connector and Input Y/C Signal from Front Y/C connector is routed to Digital Board.		

Video routing paths (NAFTA)

Path ID	Description — — — — — — — — — — — — — — — — — — —		
0	No Routing.		
1	Input signal is from FRONT VIDEO(CVBS) IN and will be routed to the digital board. This routing is same as the above path id.		
2	Input signal is from REAR VIDEO(CVBS) IN and will be routed to the digital board.		
3	Input signal is from FRONT S-VIDEO(Y/C) IN and the signal received will be routed to the digital board.		
4	Input signal is from REAR S-VIDEO(Y/C) IN and will be routed to the digital board.		
5	No Routing.		
6	No routing.		
7	No routing.		
8	Input signal is VIDEO(CVBS) from TUNER and will be routed to Y Pin of Rear Y/C Connector. This will give only black/White Picture.		
9	Input signal is from YUV IN and will be routed to YUV OUT. This is possible only if Digital Board routes back YUV signal received back to the Analogue board (DENC)		
10	No routing.		
11	No routing.		

12	No Routing.	
13	No Routing.	
14	No Routing.	
15	Input CVBS Signal from Tuner is routed to Digital Board	
16	No Routing.	
17	No Routing.	
18	Input Signal from CVBS Rear In is routed to Digital Board. This is the same as path ID 02.	
19	Input Y/C signal from Digital Board is routed to Y/C Rear Out Connector and Input signal from Y/C Front In Connector is routed to Y/C Digital Board.	
20	Y/C signal from Digital Board is routed to Y/C Rear Out Connector and Input signal from Y C Rear In Connector is routed to Y/C Digital Board.	
23	The Video signal received from the Digital board will be output on Modulator channel 3.	
24	The Video signal received from the Digital board will be output on Modulator channel 4.	

Audio routing paths (Europe)

Path ID			
0	Input signal is from FRONT AUDIO IN and will be routed to the digital board.		
1	Input signal is from FRONT AUDIO IN and will be routed to the digital board.		
2	No Routing.		
3	Input signal is AUDIO from SCART1 and will be routed to the digital board.		
4	Input signal is AUDIO from SCART2 and will be routed to the digital board.		
5	No routing.		
6	No routing.		
7	Input Audio signal is from the digital Board and it will be routed to the SCART1 and SCART2		
8	Input AUDIO signal from TUNER and will be routed to SCART2.		
9	Input signal is AUDIO from SCART1 and will be routed to SCART2.		
10	Input audio signal from SCART2 is routed to SCART1.		
11	Input Audio signal is routed from DVIO to SCART2.		
12			
13	No Routing.		
14	Input is Audio Signal from DVIO and it will be routed to Digital Board.		
15	Input is Audio Signal from TUNER and it will be routed to Digital Board		
16	No routing.		
17	No Routing.		
18	Input signal is from FRONT AUDIO IN and will be routed to SCART2.		
21	Input signal is from FRONT AUDIO IN and will be routed to the digital board.		

Audio routing paths (NAFTA)

Path ID	Description		
0	No Routing.		
1	Input signal is from FRONT AUDIO IN and will be routed to the digital board.		
2	Input signal is from REAR AUDIO IN 2 and will be routed to the digital board.		
3	Input Audio Signal is routed from FRONT Cinch In to Digital Board.(This is same as path ID 01)		
4	Input Signal is from Rear Cinch In1 and it will be routed to Digital Board		
5	No routing.		
6	No routing.		
7	No routing.		
8	No Routing.		
9	No routing.		
10	No Routing.		
11	No Routing.		
12	No Routing.		
13	Input Signal is from Digital Board and it will be routed to the digital board.		
14	No routing.		
15	Input is Audio Signal from TUNER and it will be routed to Digital Board.		
16	Input signal is AUDIO from dvio board and will be routed to Digital Board.		
17	No routing.		
18	No routing.		
19	No routing.		
20	Input signal is from REAR AUDIO IN 2 and will be routed to the digital board.		
21	Input signal is from REAR AUDIO IN 1 and will be routed to the digital board.		

5. DVDR70 & DVDR75/0x1 Diagnostic Software

22	Input signal is from REAR AUDIO IN 1 and will be routed to the digital board.
23	The Audio signal received from the Digital board will be outputted on Modulator channel 3.
24	The Audio signal received from the Digital board will be outputted on Modulator channel 4.

Frequency download string format

Format	description	remarks
X(XXX)	Preset number	
vvww	VV: Channel number WW : Channel offset	
ZZ	Byte containing 8 bit fields for TRUE/FALSE: BIT 0: Decoder BIT 1: Modulation BIT 2: NICAM SAP BIT 3: Satpreset BIT 4: Presetdefined Channelpreferred BIT 5: ExtPreset BIT 6: NameManuallyChanged BIT 7: ChannelPreset	NICAM/stereo bit for Europe SAP/stereo bit for NAFTA Preset defined bit is only used for Europe. For NAFTA, it is renamed as channelpreferred to indicate II a channel is preferred or not. TRUE if preset is defined from P50 as extern [TGA]
НН	HfSystemFineTuning	HfS: 4 bit, FT: -4,,4
IIJJKKLLMM	Netname	Range: A,,Z,0,,9,_, Netname length exists for Europe only. 'II' is the HEX-value for the first character, 'JJ' for the second, Ö

The message string of (DS_MessageDef *msgString) should be in the format:

"X(XXX)_VVWW_ZZ_HH_IIJJKKLLMM".

Here will be 'X(XXX)' a decimal value in the range of 0 to 255.

V, W, Z, H, I, J, K, L, M are hex values with out the prefix '0x' (in the range 0... 9,A ... F) " $_$ " Denotes a space character.

Remarks:

CHANNEL_SYSTEM is for NAFTA. PRESET_SYSTEM is for Europe.

System (SYS)

Cystern (515)			
Nucleus Name	DS_SYS_HardwareVersionGet		
Nucleus Number	1200		
Description	Get the hardware	version and type of the digital board	
Technical	 Initialise the PIO pins of the chrysalis Read out the hardware version through the PIO pins Read the segment header in FLASH and determine hardware version 		
Execution Time	Less than 1 second		
User Input	None		
Error	Number	Description	
	120000	Getting the hardware version and type of the digital board succeeded	
	120001	Getting the hardware version and type of the digital board failed	
	120002	Wrong hardware version read from FLASH	
Example	DS:> 1200 120000: Hardware ID = 00 The (PIO-pins) Digital Board ID = 2 Test OK @ DS:>		

Nucleus Name	DS_SYS_Softwa	areVersionBootGet	
Nucleus Number	1201		
Description	Get the version of the boot software on the digital board		
Technical	- Read the segment header in FLASH and determine Boot software version		
Execution Time	Less than 1 second		
User Input	None		
Error	Number	Description	
	120100	Getting the Boot software version succeeded	
	120101	Getting the Boot software version failed	

	TD0. 4004
Example	DS:> 1201
	120100: Software Boot Version = 0001
	Test OK @

Nucleus Name	DS_SYS_SoftwareVersionDownloadGet	
Nucleus Number	1202	
Description	Get the version of	f the download software on the digital board
Technical	- Read the segment header in FLASH and determine Download software version	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	120200	Getting the Download software version succeeded
	120201	Getting the Download software version failed
Example	DS:> 1202 120200: Software Download Version = 0001 Test OK @	

Nucleus Name	DS_SYS_SoftwareVersionApplGet	
Nucleus Number	1203	
Description	Get the version of the application software on the digital board	
Technical	- Read the segment header in FLASH and determine Application software version	
Execution Time	Less than 1 second	
User Input	None	
Error	Number	Description
	120300	Getting the Application software version succeeded
	120301	Getting the Application software version failed
Example	DS:> 1203 120300: Software Application Version = 0001 Test OK @	

Nucleus Name	DS_SYS_SoftwareVersionDiagnosticsGet	
Nucleus Number	1204	
Description	Get the version of	the diagnostics software on the digital board
Technical	 Read the segment header in FLASH and determine Diagnostics software version 	
Execution Time	Less than 1 secon	nd
User Input	None	
Error	Number	Description
	120400	Getting the Diagnostics software version succeeded
	120401	Getting the Diagnostics software version failed
Example	DS:> 1204 120400: Software Test OK @	Diagnostics Version = 0001
	120503	Something went wrong while transferring the data.
	120504	User cancelled the upload.
Example	DS:> 1205 1 120500: Test OK @	

Nucleus Name	DS_SYS_EepromUpload	
Nucleus Number	1205	
Description	Upload the contents of the NVRAM on the analogue board or the digital board to the service PC, by using the X-modern protocol	
Technical	 Decode the user input Determine whether to upload the analogue board or digital board NVRAM Start uploading using the XMODEM protocol Determine whether all was uploaded OK 	
Execution Time	Depends on the chosen NVRAM and the User.	

User Input	Upload the Choose in the tell Select X-modern	ne following parameters for the nucleus: e contents of the NVRAM of the digital board e contents of the NVRAM of the analogue board rminal on the control PC -> transfer -> receive file. protocol. Then click receive in the dialogue and fill in the file name at to store the data.
Error	Number	Description
	120500	Download succeeded.
	120501	User input is not valid.
	120502	Something went wrong while copying the data from NVRAM to
		SDRAM.

Nucleus Name	DS_SYS_EepromDownload	
Nucleus Number	1206	
Description	Download a file with the contents of the NVRAM for the analogue board or the digital board from the service PC to the recorder, by using the X-modem protocol	
Technical	- Store the do	user input and determine what eeprom to fill: digital / analogue ownloaded (using XMODEM) bytes in SDRAM first these contents into the eeprom after verification
Execution Time	Depends on the ch	osen NVRAM and the User.
User Input	Download to Download to Download to Download to	following parameters for the nucleus: the contents of the NVRAM of the digital board the contents of the NVRAM of the analogue board thinal of the control PC -> transfer -> send file. The choose a file with the Browse button in the dialogue
Error	Number	Description
	120600	Download succeeded
	120601	The write to NVRAM failed.
	120602	Timeout. Too many retries.
	120603	A file was sent with a wrong header.
	120604	User cancelled the download.
	120605	User input is not valid.
	120606	Unknown Error
Example	DS:> 1206 1 120600: Test OK @	

Nucleus Name	DS_SYS_DvidNumberGet	
Nucleus Number	1208	
Description	Get the IEEE139	4 ID
Technical	- Read out the ID from the configuration segment and return this info to the user	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	120800	Getting the unique DV ID succeeded
	120801	Getting the unique DV ID failed
Example	DS:> 1208 120800: The DvldNumber is: 0x0C22384E5A Test OK @	

Nucleus Name	DS_SYS_licWrite		
Nucleus Number	1209		
Description	Perform an IIC w	rite action on the digital board	
Technical	Determine bus ID, slave address, number of bytes to be written and the byte array of data from the user input Initialise IIC Write the data to the slave specified through IIC		
Execution Time	Less than 1 second		
User Input	The user input the number of bytes to write followed by these bytes: <busid><slave address="" to="" write=""><number bytes="" of="" to="" write=""><d1><d2><><dx> Where the bus ID is either 0 (normally used) or 1</dx></d2></d1></number></slave></busid>		
Error	Number	Description	
	120900	Writing the data over IIC succeeded	

	120901	The IIC bus was not accessible
	120902	There was a timeout writing to the device
	120903	The IIC acknowledge was not received
	120904	The communication with the device failed
	120905	Got unknown IIC bus error:
	120906	Unable to initialise IIC bus
	120907	Decoding bus ID unsigned value failed
	120908	Decoding slaveAddr unsigned value failed
	120909	Decoding nrBytes unsigned value failed
	120910	Bus ID out of range
	120911	nrBytes out of range
	120912	Unable to decode parameters
Example	DS:> 1209 0 0xa0 1 0x6 120900: 1 Bytes written Test OK @	

Nucleus Name	DS_SYS_licRead	
Nucleus Number	1210	
Description	Perform an IIC read action on the digital board	
Technical	Determine the bus ID, slave address and number of bytes to read from the user input Initialise IIC Read the data form the slave specified	
Execution Time	Less than 1 second	
User Input	The user inputs the number of bytes to read and the address to read them from: <busid><slave address="" from="" read="" to=""><number bytes="" of="" read="" to=""> Where the bus ID is either 0 (normally used) or 1</number></slave></busid>	
Error	Number	Description
	121000	Reading the data over IIC succeeded
	121001	The IIC bus was not accessible
	121002	There was a timeout writing to the device
	121003	The IIC acknowledge was not received
	121004	The communication with the device failed
	121005	There was an unknown IIC bus error
	121006	IIC bus initialisation failed
	121007	Decoding bus ID unsigned value failed
	121008	Decoding slave address unsigned value failed
	121009	Decoding number of bytes unsigned value failed
	121010	Bus ID out of range
	121011	nrBytes out of range
Example	DS:> 1210 0 0xa0 1 121000: Value read =0x06 Test OK @	

Nucleus Name	DS_SYS_UartWrite	
Nucleus Number	1211	
Description	Perform an UART	write action on the digital board on a specified UART
Technical	 Decode the user input for the proper port to use Write out the bytes through the indicated port 	
Execution Time	Less than 1 secon	nd.
User Input	The user inputs the UART to write to, the number of bytes and the bytes to be written to the UART. 1=UART port 1: not used 2=UART port 2: Bit Engine 3=UART port 3: Analogue board <uartnr><number bytes="" of="" to="" write=""><d1><d2><><dx></dx></d2></d1></number></uartnr>	
Error	Number	Description
	121100	Writing the bytes to the UART succeeded
·····	121101	The user provided wrong input
	121102	Writing to the UART failed
Example	DS:> 1211 2 2 0x 121100: Test OK @	d1 0x01

Nucleus Name	DS_SYS_UartRead	
Nucleus Number	1212	
Description	Perform an UAR	read action on the digital board on a specified UART
Technical	Decode the user input for the port to read from Read from the port and return data read to the user	
Execution Time	Less than 1 seco	nd.
User Input	The user inputs the UART to read from. 1=UART port 1 : not used 2=UART port 2 : Bit Engine 3=UART port 3 : Analogue board <uartnr></uartnr>	
Error	Number Description	
	121200	Reading the data from the UART succeeded
	121201	The user provided wrong input
	121202	Reading the data from the UART failed
Example	DS:> 1212 2 121200: The value that was read is: 0x50 0xD1 0x00 Test OK @	

Nucleus Name	DS_SYS_VideoLoopThroughStart		
Nucleus Number	1213		
Description	The video signal, which is confirm the user input, is routed from the input to the output. Input is set with the routing nucleus 1112. All outputs are enabled.		
Technical	Decode the videosignal: PAL / NTSC and Y/C, RGB, CVBS,YUV Initialise the Video Input Processor and check for valid signal Initialise the Video Front End and start capturing frames to memory Initialise the SYNC module Initialise the Video Post Processing and retrieve frames from memory Initialise the mixer Initialise the DENC module Route the signal to all outputs		
Execution Time	Less than 1 second, but stays running.		
User Input	<vipinput> <videooutput> <videostandard> 1. vipInput (CVBS, YC, YUV, RGB). 2. VideoOutput (YUV, RGB). 3. VideoStandard (PAL, NTSC).</videostandard></videooutput></vipinput>		
Error	Number	Description	
	121300	Video LoopthroughStart succeeded	
	121301	User input is not valid.	
	121302	Initialisation of the VIP failed.	
	121303	Video Signal on the input is not a valid signal.	
	121304	Initialisation of the VFE failed.	
Example	DS:> 1213 CVBS RGB PAL 121300: Test OK @		

Nucleus Name	DS_SYS_VideoLoopThroughStop	
Nucleus Number	1214	
Description	Stop routing the	rideo input to all the outputs.
Technical	- Stop the D	DENC and the Video Front End
Execution Time	Less than 1 second.	
User Input	-	
Error	Number	Description
	121400	VideoLoopthroughStop succeeded
	121401	DENC module on Chrysalis failed.
Example	DS:> 1214 121400: Test OK @	

Nucleus Name	DS_SYS_VideoLoop
Nucleus Number	1215
Description	Note: Before executing this nucleus the user must route the video signal on the analog board with nucleus DS_ANAB_VideoRouting(1112).

Technical	- Evaluate user	input.		
	- Reset the global variables, video memory.			
	- Fill the video memory with a vertical colourbar.			
		- Initialise the Chrysalis SYNC-module.		
		hrysalis MIXER-module.		
		hrysalis VPP-module.		
		hrysalis DENC-module.		
	 Display the ori Initialise the V 			
		hrysalis VFE-module.		
	- Try to detect a	sync in the VIP input.		
		eived image in memory.		
	 Display the red 	ceived image.		
		received image with original image.		
	 Create a conc 	lusion.		
Execution Time	3 seconds.			
User Input	Video input of the dig	ital board:		
	- CVBS			
	- YC	·		
	- YUV			
	- RGB	leo output will be routed to the video input on the digital board.		
	Video standard:	bo output will be realed to the ridge input on the engine bearing		
	- PAL			
	- NTSC			
	When no input is give	n, the nucleus will take TEST for video input and PAL for video		
	standard.	•		
Error	Number	Description		
	121500	Videoloop test succeeded.		
	121501	Wrong user input.		
	121502	The Chrysalis SYNC-module cannot be initialised.		
	121503	The Chrysalis MIXER-module cannot be initialised.		
	121504	The Chrysalis VideoPostProcessor-module cannot be ini		
		tialised.		
	121505	The Chrysalis DENC-module cannot be initialised.		
	121506	The VideoInputProcessor cannot be initialised.		
	121507	The VideoInputProcessor cannot detect a sync-signal.		
	121508	The Chrysalis VideoFrontEnd-module cannot be initia		
	121000	lised.		
	121509	The Chrysalis VideoFrontEnd-module cannot capture in		
		video field.		
	121510	When selected the RGB video input:		
	1	Error in colour red signal and/or		
		Error in colour green signal and/or		
		Error in colour blue signal.		
		When selected one of the other video inputs:		
		Error in luminance signal (Y) and/or		
		Error in chrominance signal (U) and/or Error in chrominance signal (V).		
Example	DS:> 1215 cvbs ntsc			
	121500: Test OK @			
	DS:> 1215 cvbs pal			
	DS:> 1215 cvbs pal 121508; The VideoInputProcessor cannot detect a sync-signal.			
	Error @			
	Error @ DS:> 1215 yuv ntsc			
	121511:			
	Error in luminance si	gnal(Y)		
	Error in chrominance signal(I)			
	Error in chrominance signal(V)			
i	Error @			

Nucleus Name	DS_SYS_SlashVersionSet	
Nucleus Number	1217	
Description	Set the slash version of the system	
Technical	Decode the user input for the slash version to set Issue the command to set the slash version to the analogue board Wait for the result and return this to the user	
Execution Time	Less than 1 second.	
User Input	The slash version	

Error	Number	Description
	121700	Setting the slash version succeeded
	121701	Invalid slash version, no slash version is set.
	121702	Setting the slash version on the Analogue Board fails.
	121703	Invalid input.
	121704	The returned errorcode from the analogue board is un- known:
	121705	No DS errCode known for analogue board error:
	121706	There was no response from the analogue board.
Example	DS:> 1217 82 121700: Test OK @	

Nucleus Name	DS_SYS_SlashVersionGet		
Nucleus Number	1218		
Description	Get the slash vers	sion of the system	
Technical	- Issue the command to get the slash version to the analogue board - Return the received information to the user		
Execution Time	Less than 1 secon	nd.	
User Input	None		
Error	Number	Description	
	121800	Getting the slash version succeeded	
	121801	Getting the slash version failed	
	121802	The IIC write failed	
	121803 The IIC read failed 121804 There was no response from the analogue box		
	121805	No DS errCode known for analogue board error:	
Example	DS:> 1218 121800: The slash version is: 82 Test OK @		

Nucleus Name	DS_SYS_Virginize		
Nucleus Number	1219		
Description	(Re-) Virginize the recorder. User data in the NVRAM of the analogue board is cleared		
Technical	 Issue the command to return to the factory defaults to the analogue board Wait for the result and return this to the user 		
Execution Time	1 second.		
User Input	None		
Error	Number	Description	
	121900	Virginization succeeded	
	121901	Virginization on the Analogue Board failed.	
	121902	The returned errorcode from the analogue board is un- known:	
	121903	No DS errCode known for analogue board error:	
	121904	There was no response from the analogue board.	
Example	DS:> 1219 121900: Test OK @		

Nucleus Name	DS_SYS_VirginModeOn		
Nucleus Number	1220		
Description	Turn on the virgin	mode functionality (e.g. the auto channel search upon start-up)	
Technical	Issue the command to set the bit for the virgin mode to the analogue board Wait for the result and return this to the user		
Execution Time	Less than 1 seco	nd.	
User Input	None		
Error	Number	Description	
	122000	Turning on the virgin mode succeeded	
	122001	Turning on VirginMode on the Analogue Board failed.	
	122002	The returned errorcode from the analogue board is un- known:	
	122003	No DS errCode known for analogue board error:	
	122004	There was no response from the analogue board.	

Example	DS:> 1220		
	122000:		
	Test OK @		

Nucleus Name	DS_SYS_VirginModeOff		
Nucleus Number	1221		
Description	Turn off the virgin mode functionality (e.g. the auto channel search upon start-up)		
Technical	 Issue the command to reset the bit for the virgin mode to the analogue board Wait for the result and return this to the user 		
Execution Time	Less than 1 secon	nd.	
User Input	None		
Error	Number	Description	
	122100	Turning off the virgin mode succeeded	
	122101	Turning off VirginMode on the Analogue Board failed.	
	122102	The returned errorcode from the analogue board is un- known:	
	122103	No DS errCode known for analogue board error:	
	122104	There was no response from the analogue board.	
Example	DS:> 1221 122100: Test OK @		

Nucleus Name	DS_SYS_DisplayFatalOn	
Nucleus Number	1223	
Description	Turn on the display-fatal functionality which displays debug-information on the dis- play when encountering a fatal error condition from which could not be recovered au- tomatically	
Technical	 Issue the command to use the display-fatal functionality to the analogue board Wait for the result and return this to the user 	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	122300	Turning on the display-fatal functionality succeeded
	122301	Turning on the display-fatal functionality failed
	122302	The returned errorcode from the analogue board is unknown:
	122303	No DS errCode known for analogue board error:
	122304	There was no response from the analogue board.
Example	DS:> 1223 122300: Test OK @	

Nucleus Name	DS_SYS_DisplayFatalOff	
Nucleus Number	1224	
Description	Turn off the display-fatal functionality which displays debug-information on the dis- play when encountering a fatal error condition from which could not be recovered au- tomatically	
Technical	 Issue the command to stop using the display-fatal functionality to the analogue board Wait for the result and return this to the user 	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	122400	Turning off the display-fatal functionality succeeded
	122401	Turning off the display-fatal functionality failed
	122402	The returned errorcode from the analogue board is unknown:
	122403	No DS errCode known for analogue board error:
	122404	There was no response from the analogue board.
Example	DS:> 1224 122400: Test OK @	

Nucleus Name	DS_SYS_DisplayFatalGet
Nucleus Number	1225

Description	Get the display-fatal flag of the recorder	
Technical	 Issue the command to get the status of the display-fatal functionality to the analogue board Wait for the result and return this to the user 	
Execution Time	Less than 1 second.	
User Input	None	
Error	Number	Description
	122500	Getting the display-fatal flag succeeded
	122501	Getting the display-fatal flag failed
	122502	The returned errorcode from the analogue board is un- known:
· · · · · · · · · · · · · · · · · · ·	122503	No DS errCode known for analogue board error:
	122504	There was no response from the analogue board.
Example	DS:> 1225 122500: Test OK @	

Nucleus Name	DS_SYS_SettingsSet		
Nucleus Number	1226		
Description	Programs the digit	tal board settings into the boot EEPROM on the digital board.	
Technical	- Evaluate user input Set-up IIC-bus Write data to boot EEPROM Update checksum.		
Execution Time	1 second		
User Input	A large hexadecimal value that represents the digital board settings obtained from the DbString.exe program or from a reference set.		
Error	Number	Description	
	122600	The settings were successfully programmed.	
	122601 User input is invalid.		
	122602	IIC access failed.	
Example	DS:> 1226 646961677473746201010200010101010101000020080000 122600: Test OK @		

Nucleus Name	DS_SYS_SettingsDisplay	
Nucleus Number	1228	
Description	Show the setting	s that are programmed in the BROM on the digital board.
Technical	 Set-up IIC-bus. Read Digital Board Settings from boot EEPROM. Display the settings. 	
Execution Time	1 second	
User Input	None.	
Error	Number	Description
	122800	The settings were successfully displayed.
	122801	IIC access failed.
	122802	Invalid settings

Example	DS:> 1228			
	Settings ID: 6D7920626F61726400020300010101020101000020080000			
	Board name: my board			
	Hardware ID: 0			
	Codec IC: PNX7100_MF2			
	Video Input Processor IC: SAA7118			
	Progressive Scan Deinterlacer IC: None			
	Progressive Scan Denc IC: ADV7196			
	I-Link physical layer circuit IC: PDI1394P25			
	I-Link link layer circuit IC: PDI1394P40			
	Audio clock: Clock scheme 1			
	Bit engine connector: available			
	IDE connector 1: available			
	IDE connector 2: not available PCI connector: not available			
	PCI connector: not available			
	RAM size 32MByte			
	ROM size (NOR FLASH bank 1) 8MRvte			
	ROM size (NOR FLASH bank 2) Not available			
	ROM size (NAND FLASH) Not available			
	Bit Engine: AV 2.0			
	122800:			
	Test OK @			

Nucleus Name	DS_SYS_SettingsGet	
Nucleus Number	1229	
Description	Get the digital board diversity settings string that is programmed in the BROM on the digital board.	
Technical	 Set-up IIC-bus. Read Digital Board Settings from boot EEPROM. Read System Settings from boot EEPROM. Display the settings. 	
Execution Time	1 second	
User Input	None.	
Error	Number	Description
	122900	The settings were successfully displayed.
	122901	IIC access failed.
	122902	The settings are invalid
Example	DS:> 1229 122900: 6D7920626F61726400020300010101020101000020080000 Test OK @	

Nucleus Name	DS_SYS_AudioLoopThroughStart	
Nucleus Number	1230	
Description	Description: The audio input is routed from the an input to all outputs. Input is set with the routing nucleus 1113. All outputs are enabled.	
Technical	- Encode the audio to AC3 in memory - Decode the AC3 in memory to audio on the outputs	
Execution Time	1second buffer time and 30 seconds playing.	
User Input	None.	
Error	Number	Description
	123000	AudioLoopthroughStart succeeded
	123001	Resetting the audio decoder failed
	123002	Resetting the audio encoder failed
	123003	Encoding the audio failed
	123004	Decoding the audio failed
Example	DS:> 1230 123000: Test OK @	

Nucleus Name	DS_SYS_AudioLoopThroughStop	
Nucleus Number	1231	
Description	Stop routing the audio input to all the outputs	
Technical	- Send the 'Mute' command to the audio decoder	
Execution Time	Less than 1 second.	
User Input	-	
Error	Number Description	
	123100	AudioLoopthroughStop succeeded

	123101	Resetting the audio decoder failed	
	123102	Resetting the audio encoder failed	
Example	DS:> 1231 123100: Test OK @		

Electronic Program Guide Board (EPGB)

Nucleus Name	DS_EPGB_VersionGet	
Nucleus Number	1300	
Description	Returns the version	n of the EPG board.
Technical	 Issue the command to get the version of the EPG board to the analogue board Return the received information to the user 	
Execution Time	3 seconds.	
User Input	None	
Error	Number	Description
	130000	Getting the version succeeded
	130001	Communication with the analog board failed.
	130002	Communication with the epg board failed.
	130003 There was no response from the analogue board.	
	130004	No DS errCode known for analogue board error.
Example	DS:> 1300 130000: Version: 6.1.9 Test OK @	

Script			
Nucleus Name	DS_IH_ScriptHandler		
Nucleus Number	Script		
Description			
Technical	Execute the included nuclei one by one If a nucleus fails quit and display the failed nucleus on the local display and serve port		
Execution Time	16 seconds		
Included tests:	1. DS_ANAB_COMMUNICATIONECHO_NUC 2. DS_DCB_COMMUNICATIONECHO_NUC 3. DS_BROM_COMMUNICATION_NUC 4. DS_SYS_SETTINGSDISPLAY_NUC 5. DS_CHR_DEVTYPEGET_NUC 6. DS_CHR_INT_PIC_NUC 7. ```

Figure 5-12

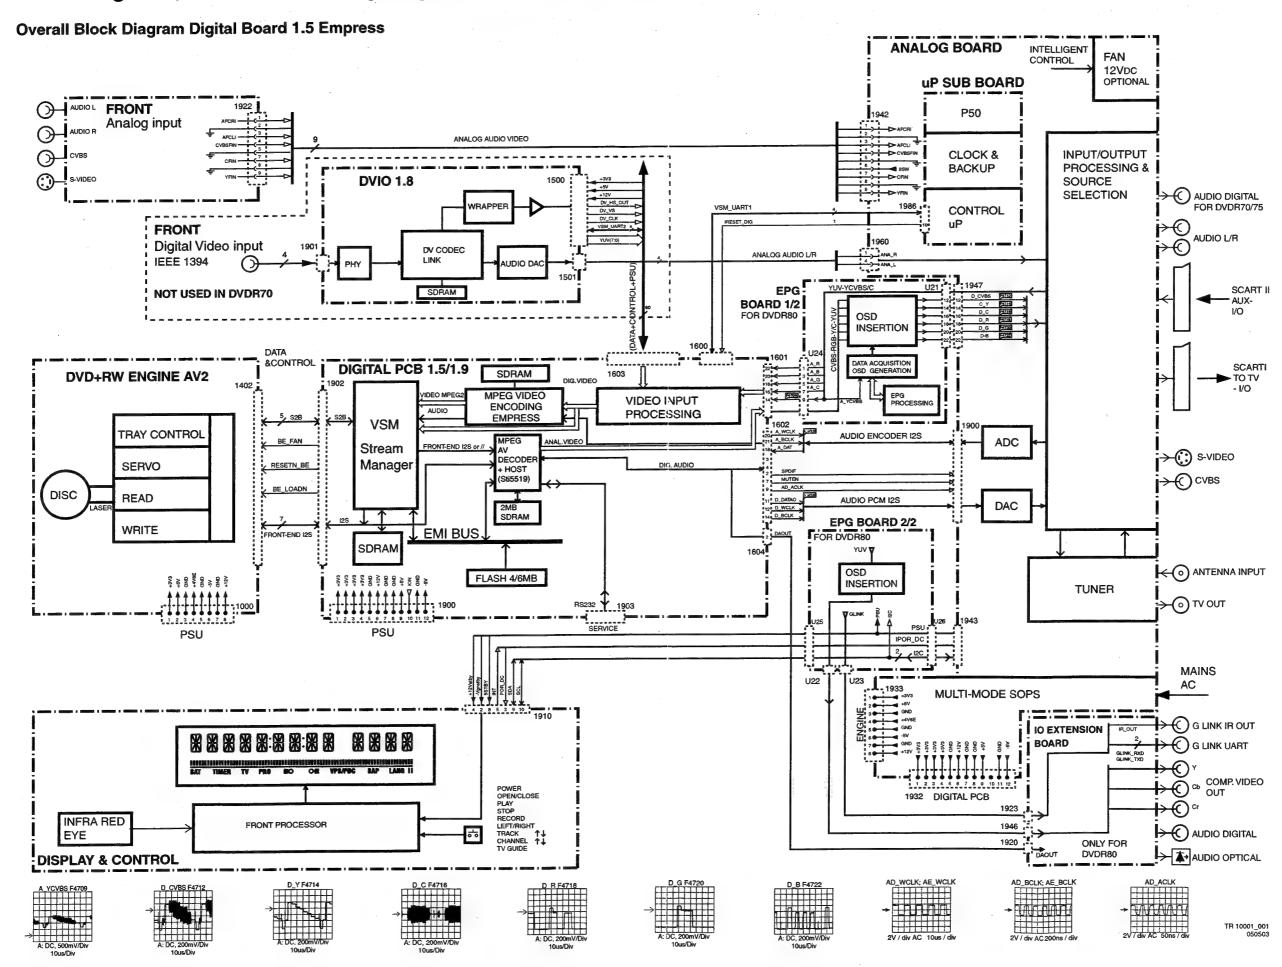

The first line indicates that the Diagnostic software has been activated and contains the version number. The next lines are the successful result of the SDRAM interconnection test and the basic SDRAM test. The last line allows the user to choose between the three possible interface forms. If pressing M has made a choice for Menu Interface, the Main Menu will appear.

5.4 Nuclei Error Codes

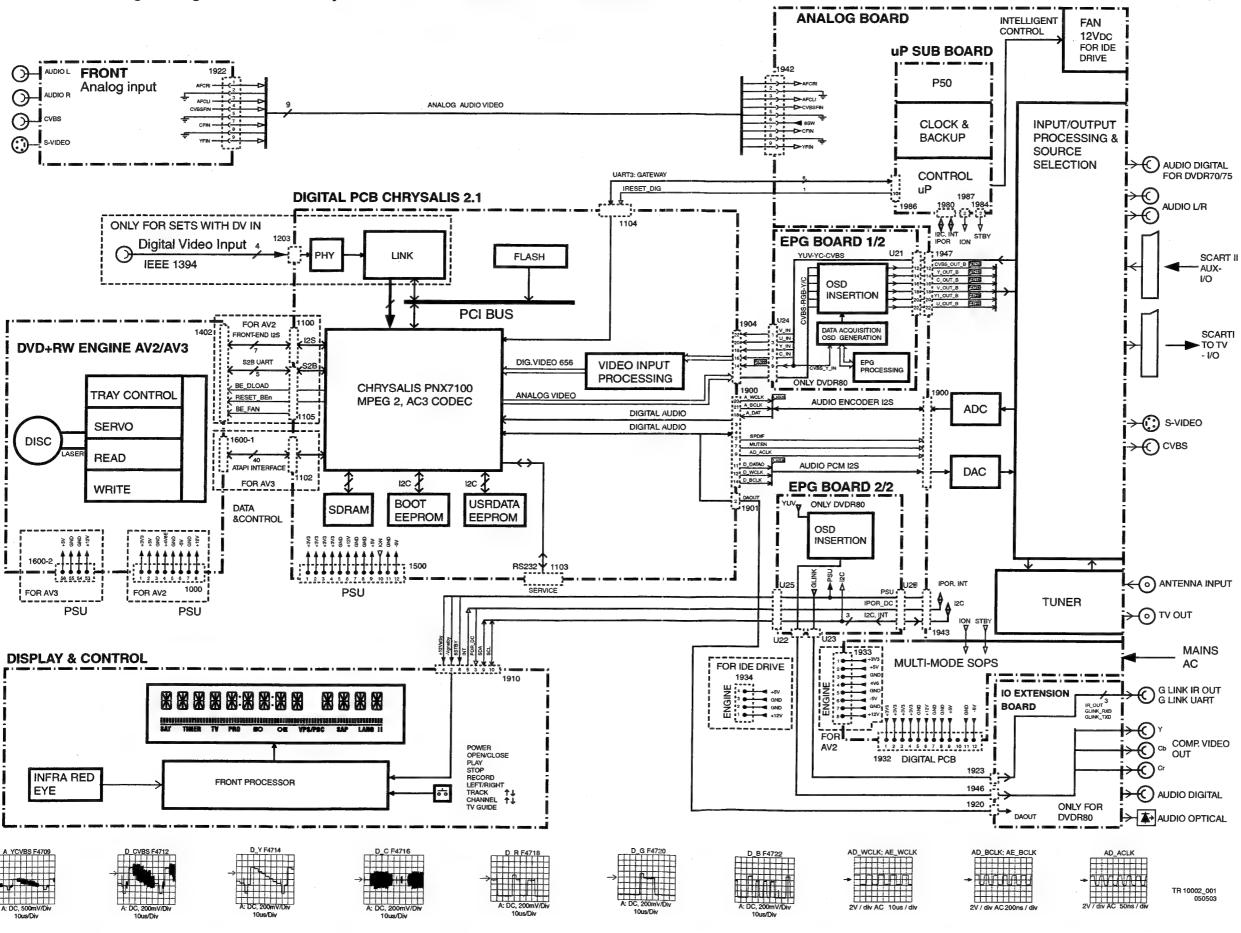

DVIO 1.8 Error Codes

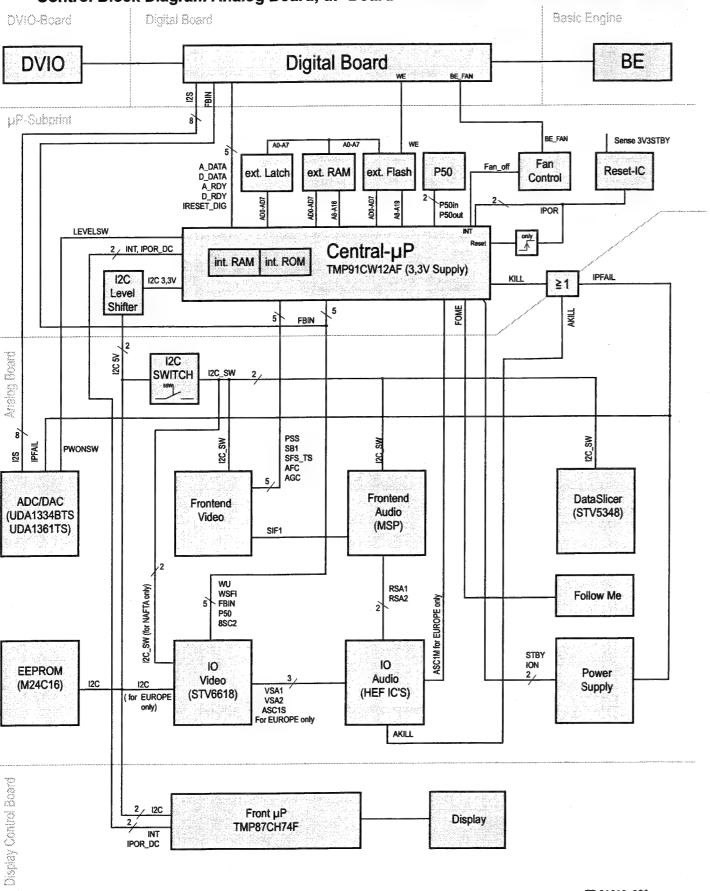

Error Code		ld	Description	Hardware
0	0x00	DVIOC_ERR_DDS_OK	No Error	
6	0x06	DVIOC_ERR_DDS_UNKNOWN	Unknown Error(including UART communication error)	
17	0x11	DVIOC_ERR_DDS_TNF_1	Link chip incorrect responding	μPD72893, Link
18	0x12	DVIOC_ERR_DDS_TNF_2	No link register access or link reset failed	μPD72893, Link
23	0x17	DVIOC_ERR_DDS_TNF_7	Link reset failed	μPD72893, Link
38	0x26	DVIOC_ERR_DDS_TNF_16	Expecting no 1394 node with GUID connectivity, while detecting connection

8. Alignments

8.1 Alignment Instructions Analog Board

Test equipment:

1. Dual-trace oscilloscope

Voltage range

: 0.001 ~ 50 V/div : DC ~ 50 MHz

Frequency Probe

: 10:1, 1:1

2. DVM (Digital voltmeter)

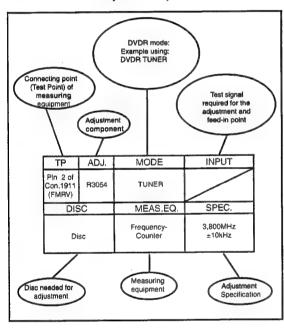

3. Frequency counter

Sinus generator
 Sinus

: 0 ~ 50 MHz

5. Test pattern generator

How to read the adjustment procedures:

Front End (FV)

Service tasks after replacement of IC 7710, coil L5710 and L5711:

1 AFC Adjustment:

Purpose: Correct adjustment of demodulator AFC - circuit Symptom, if incorrectly set:

Bad or disturbed TV channel reception.

PAL - AFC adjustment [5711]:

TP	ADJ.	MODE	INPUT
IC 7710 Pin 17 (F708)	L5711	TUNER	38,9MHz 500mV _{pp} at Tuner 1705, Pin 11 (F710, IF-out)
DISC		MEAS.EQ.	SPEC.
		DC Voltmeter Frequ. Generator	2,5V ±0,1V

Storage in NVRAM via command mode interface of DSW:

After adjustment, the AFC reference value has to be stored in the NVRAM. This reference value is 256 * measured voltage/Ucc. Ucc is 5.0V. Store the reference value via command 732, followed by the ref. value. Example: DD:> 732 128

2 HF - AGC adjustment [3724]:

Service tasks after replacement of IC 7710:

Purpose: Set amplifier control.

Symptom, if incorrectly set:

Picture jitter if input level is too low and picture distortion if input level is too high.

TP	ADJ.	MODE	INPUT
Tuner 1705 Pin 11 (F710, IF-out)	R3707	Set tuned to channel 25 503.25 MHz	5mV(74dBµV) on aerial input PAL white picture, audio IF on, no modulation
DISC		MEAS.EQ.	SPEC.
		Oscilloscope Video Pattern Generator	500mV _{pp} +/-0.5dB (use a 10:1 probe)

3 Attenuating the 40.4 MHz [5710]: (SECAM only)

Service tasks after replacement of coil 5710:

Purpose: To attenuate the band I carrier rests.

Symptom, if incorrectly set:

Bad picture quality when the filter attenuates the picture carrier (38.9MHz).

TP	ADJ.	MODE	INPUT		
OFW 1701 Pin 1 (F709)	L5710	TUNER	40.4 MHz, 200mV _{ms} at Tuner 1705, Pin 11 (F710, IF-out)		
DI	SC	MEAS.EQ.	SPEC.		
		Oscilloscope, Sinus Generator, Counter	adjust minimum amplitude		

If the adjustment is correct the signal at pin 1 of OFW [1701] must be smaller than the input signal amplitude by at least 6 dB.

8.

Reprogramming Procedure of NVM on the 8.2 Microprocessor Sub PCB

The NVM, item 7808, on the Microprocessor Sub board contains the following factory settings:

- 1. Clock correction factor
- AFC reference value
- Slash version

The settings 1,2 and 3 are stored in the NVM during the production of the analogue board.

The slash version is stored at the end of the production line of

In case of failure, the NVM must be replaced by an empty device. By way of commands via the Diagnostic Software or via ComPair, the factory settings must be restored in the NVM.

8.2.1 **Clock Correction Adjustment**

To guarantee an exact function of the real time clock, an adjustment of the clock frequency is possibe. The adjustment value is stored in the NVM.

Procedure:

- put the set in service command mode
- execute command 722 for Digital Board 1.5 Empress or 1117 for Chrysalis to initiate that a signal with 32768 Hz is available on pin 3 of connector 1988 example:
 - DD:>722 or DD:>1117
- measure the frequency fmeas of the Clock Crystal with an accuracy of 0.1 Hz.
- Calculate the parameter to be entered: 32768/fmeas * 106
- Normally the parameter must be between 999902 and 1000097. If the parameter and therefore the frequency of the crystal is outside this range, the crystal must be
- Execute command 721 for Empress or 1118 for Chrysalis with the parameter as input example:

DD:>721 1000023 (Empress) or DD:>1118 1000023 (Chrysalis)

AFC Reference Voltage Tuner

This function stores the reference voltage for the tuner in the NVM. Before this value can be stored, the AFC adjustment, described in the adjustment instructions of the analogue board, must be carried out.

Procedure:

- Adjust AFC circuit
- Calculate the reference value
- Execute command 732 for Empress or 1119 for Chrysalis and use the calculated reference value as parameter example: DD:>732 128 (Empress) or DD:>1119 128 (Chrysalis)

8.2.3 Slash Version

The slash version is stored with command 715 for Empress or 1217 for Chrysalis, followed by the slash version as parameter. The slash versions used in DVDR75 and DVDR80 are the

DVDR80/00x/02x: SV 65 DVDR80/05x: **SV 66** DVDR75/00x/02x: SV 67 DVDR75/05x: **SV 68** DVDR70/00x/02x: SV 69 DVDR70/05x: SV 70

Example:

DD:>715 65 (Empress) or DD:>1217 65 (Chrysalis)

Reset of Slash Version

Use command 729 for Empress or 1115 for Chrysalis to reset the analogue board to the default setting.

Procedure:

- Put the set in DSW command mode
- Execute command 729 (Empress) or 1115 (Chrysalis) with the following parameters:

DD:> 729 w 0xAE 2 0xD0 0x00 (Empress) DD:> 1115 w 0xAE 2 0xD0 0x00 (Chrysalis)

Leave the DSW command mode and start up the set in application mode

No background is visible on the TV screen. The analogue board is ready to accept the appropriate slash version

Rework Procedure IEEE Unique Number 8.3

8.3.1 Scope:

The procedure describes how to upgrade sets with a unique number after repair. This unique number is stored in the NVRAM (item 7201) of the digital board at the end of the production line.

This procedure is only valid or necessary when:

- The digital board is replaced
- NVRAM on the digital board is replaced
- **NVRAM** is cleared

In all other cases the repaired set retains its unique number. The procedure defines several means to re-assure the unique number depending on the possibilities of repair or the state the faulty set is in.

8.3.2 Handling:

State of original (defective) board:

- 1. The digital board starts up in Diagnostics Mode: follow procedure A to retrieve the valid unique number
- The digital board does NOT start up in Diagnostics Mode: follow procedure B.

8.3.3 Procedure A

- 1. Connect defective digital board to PC via serial cable (3122
- 2. start up hyper terminal or any other serial terminal via the correct settings (DSW command mode interface)
- 3. read out existing unique number via nucleus 403 (Empress) or 1208 (Chrysalis) example: DD:> 403 40300: DV Unique ID = 00D7A1FC6C Test OK
- 4. note read out
- program new digital board via nucleus 410 (Empress) or 1207 (Chrysalis) example:

DD:> 410 00D7A1FC6C 41000: Test OK @

The set has now the original unique number

8.3.4 Procedure B

- 1. Note the serial number of the set example: VN050136130156
 - VN = production centre (VN....Szekesfehervar). According to UAW-500: V=22 and N=14
 - 05 = change code (this is not used for this calculation)
 - 01 = YEAR
 - 36 = Production WEEK
 - 130156 = Lot and SERIAL number
- 2. Calculate the unique number: this number always exists out of 10 hexadecimal numbers.
- 3. First 5 numbers: First we calculate a decimal number according to the formula below:35828*YEAR + 676* WEEK + 26*A + H + 8788 The figures are fixed, YEAR + WEEK + factory code (A + H) are variable Example: 35828*01+676*36+26*1+8+8788 = 68986 (decimal) Then we translate the decimal number to a hexadecimal number. example: 68986 (decimal)= 10D7A (hex)
- 4. Last 5 numbers: The last 5 numbers exist out of the Lot and SERIAL number.
 - We have to translate the decimal number to the next 5 hexadecimal numbers: Example: 130156 (decimal) = 1FC6C (hex)
- Program new digital board via nucleus 410 (Empress) or 1207 (Chrysalis). Therefore we use the 10 hexadecimal numbers we calculated above: example:

DD:> 410 10D7A1FC6C or DD:>1207 10D7A1FC6C 41000: Test OK @

The set has now its original unique number

8.4 **Adjustment DVIO 1.8 PCB**

This adjustment sets the free running frequency of the VCO of the audio PLL. It should be carried out after replacement of IC 7604.

- Disconnect DVD+RW set from the mains.
- 2. Plug DVIO1.8 board via edge-connector onto Digital Board (DVIO board is vertically oriented, so that both sides of the PCB are accessible for measurements).
- 3. Connect DVD+RW set to the mains.
- 4. Turn DVD+RW set on and select any video input source except the DV input.
- Check the signal at test point F611 with an oscilloscope. The signal should be 5V digital with 50% duty-cycle.
- Measure the frequency of the signal at test point F610 and adjust the potentiometer 3605 to get a frequency of 12.288MHz 50kHz (after removing the screwdriver from the potentiometer).
 - In case the frequency can not be increased sufficiently, replace capacitor 2618 by NP0-type capacitor with 18pF. Adjust afterwards again the frequency with the potentiometer.
 - In case the frequency can not be decreased sufficiently, add (3pF-10pF) trim-capacitor in parallel to capacitor 2618 or replace capacitor 2618 by NP0-type capacitor with 27pF.Adjust afterwards again the frequency with the potentiometer (and/or trimcapacitor).
- 7. Switch DVD+RW set to Stand-by mode.
- Disconnect the DVD+RW set from the mains.
- Plug DVIO1.8 board directly (without edge connector) onto Digital Board.
- 10. Connect DVD+RW set to the mains.
- 11. Connect a DV-source that transmits DV-video data with audio to the DVD+RW set.
- 12. Turn DVD+RW set on, select DV input, and switch DVD+RW set appropriately to output the decoded signal. Audio should be output without distortion.

Alignments after replacing the Boot EEPROM 8.5 7810 in sets with Digital Board Chrysalis

The NVM, item 7810, on the Digitalt Board Chrysalis contains the "Diversity String" that tells the software during startup which hardware version is present.

The setting is stored in the NVM during the production of the Digital Board Chrysalis

In case of a fault the NVM must be replaced by a programmed device containing the boot script.

Via the Diagnostic Software the Diversity String is stored with command 1226, followed by the Diversity String as parameter.

The diversity strings used in DVDR70/0x1 and DVDR75/0x1 are the following:

Circuit-, IC descriptions and list of abbreviations

Display Board 9.1

Microcontroller 9.1.1

The core element of the Display Control unit is the microcontroller TMP87CH74AF [7110]. The TMP87CH74AF is an B bit microcontroller fitted with 32kB ROM and 1kB RAM. It requires 5V supply and is responsible for the following functions:

- Interface to Central Controller-P
- Evaluation of the keyboard matrix
- Decoding the remote control commands from the infra-red receiver
- Activation and control of the local display
- Heater voltage generation

The 8 MHz resonator (Pos. 1111) generates the system clock. The reset is generated by the CC-P via "POR DC"-signal where the transistor [7106] is used as a level-shifter from 3V3

Interface to the Central Control µP

The communication to the main microcontroller (CC) on the P-Sub-PCB is done via I2C-Interface, where the TMP87CH74AF acts in slave-mode.

An additional wire ("INT"-line) is used to signal the Central controller that data are ready, e.g. when a key has been

9.1.3 Evaluation of the keyboard matrix

There are 12 different keys on the display board. A resistor network is used to generate a specific direct voltage value, depending on the pressed key. Via the resistors 3107 and 3102 on the analog/digital (A/D) ports (7103 pin 37 and 38) the evaluation is done.

IR receiver and signal evaluation

The IR receiver [7107] contains a selectively controlled amplifier as well as a photo-diode. The photo-diode changes the received infra red transmission (approx. 940nm) to electrical pulses, which are then amplified and demodulated. On the output of the IR receiver [7107], a pulse sequence with TTL-level, which corresponds to the envelope curve of the received IR remote control command, can be measured. This pulse sequence is fed into the controller for further processing via port TC1 [7103, pin20].

Vacuum Fluorescence Display

The VFD "BJ900GNK" [POS 7100] is fully controlled by the microcontroller. The µC also includes the driving stages. Only two additional drivers [POS 7101 and 7102] are necessary for the grids 8 and 9 because of their large size.

9.1.6 VFD Heater Voltage Generator

The circuit around POS [7106, 7108 and 7109] is used to generate a proper AC-Voltage for the filament of the VFD. For this the microcontroller generates an appropriate rectangular signal with 50% duty-cycle and a frequency of 30 kHz at pin 19. Pos. [5104] and [2113] are acting as a resonance-circuit. Via Zener-Diode (POS[6100]) and resistors [3119, 3122 and 3123] the two heater-pins of the VFD ("FIL1" and "FIL2") are clamped so that the grids and segments can be fully switched off.

9.1.7 REC-LED

The REC-LED-ring is made with 3 red LED, controlled via pin 3 (only for flashing) and pin 12 for on/off switching, of the microcontroller. The POS [7105] is used as a driver for the led.

9.1.8 **EPG-LED**

The EPG led is a white led and controlled from the pin 14 from the microcontroller. The POS [7110] is used as a driver for the

9.1.9 **TRAY-LED**

There are 6 leds (chip) necessary to illuminate the tray, these 6 leds are located on a little sub-pcb connected over a 4 pin connector POS [1911] from the DC-print. The leds are controlled from pin 11 of the microcontroller.

Microcontroller Sub Board (UP SUB Board) 9.2

9.2.1 General

This small PCB is directly soldered in on top of the Analogue-

It is used with no diversity in all three different basic versions (Europe, NAFTA and APAC-Pal). Only the software being loaded into the external Flash-memory is not the same.

9.2.2 Microcontroller

The main part of the Sub-PCB is the central controller (CC) µP [7804] TMP91CW12AF, which is a 16-bit CPU with 128kBROM and 4kB RAM.

It works with a 3V3 supply and a system clock of 24,576MHz [1801].

The 3V3-supply is made out of the "5VSTBY" by the circuit

After connecting the set to the mains (power-up) the IC [7806] generates a reset pulse. This signal ("IPOR") is directly fed to first priority interrupt input (pin 63) for power fail detection and also to the Reset-Input of the CC (Pin30) via [7802], which is necessary to generate a reset only during power-up. In case of power fail pin 30 of the CC must be kept high (3V3). The internal memory of the CC is too small for all necessary demands. Therefore an external Flash-ROM [7805] with 1MByte in size and a RAM [7803] with 128kByte are necessary. Both parts are connected to the µP via a parallel address-/data-bus. The lower eight bus-lines (AD0 to AD7) are multiplexed by [7801] and the "ALE"-signal of the CC. For updating of the software the external Flash-ROM can be reprogrammed by the µP. During this process [7807] is switched on by the "WE"-signal.

When no mains is connected, the CC is supplied via Gold-Cap [2816] during the power backup period. The diode [6802] prevents unwanted current consumption of other components. The internal ROM of the µP holds the program code for the Real-Time-Clock. Only the microprocessor is supplied by the backup cell, not the external memories and the µP operates in a low frequency mode with the clock crystal [1805] only (32.768 kHz). To adjust the clock the frequency can be measured at pin 87 of the μP in a special test-mode.

9.2.3 Control-Interfaces

The CC is communicating with the digital board via a serial connection, which operates at a speed of 19,4 kbit/s ("D_DATA"-, "A_DATA", "D_RDY"- and "A_RDY"-signal on [1986]). By generating a high level on pin 16 of the CC the digital PCB can be reset (inverter [7817] in between). Most of the other parts are controlled by the µP via I2C-bus ("SDA"- and "SCL"-signal). The FETs [7821] and [7822] are used for adaptation of the 3V3-level on CC-side to the components supplied with 5V.

The CC can also reset the display-board-µP by pulling pin 39 to high.

The transistor [7819] acts as a level shifter for the "INT"-signal. In the European sets a bi-directional interface is established between the recording unit and the TV device at pin 10 of the Scart ("P50"-line/Easy Link). The processing is done via pin 14 (output) and pin 38 (input) of the CC and the circuit around [7813], [7814] and [7815].

EEPROM 9.2.4

The EEPROM M24C16 [7808] is an electrical erasable and programmable, non-volatile memory. The EEPROM stores data specific to the device, such as the AFC-reference value of the Europe IF-part, the clock-correction-factor, etc. It is accessed by the uP via the I2C-bus.

9.2.5 **Sync Separator**

To detect whether a video signal is available or not a separate IC [7825] is used to extract the sync information out of the video signal that is also routed to the digital board for recording. While on the input a low-pass-filter ([2823] and [3869]) limits the bandwidth an additional filter (circuit around [7818]) on the output avoids distortions. Afterwards the sync-signal is routed to pin11 of the CC.

9.2.6 **Fan Control**

To avoid unwanted temperatures inside the set (especially the Laser on the OPU of the drive is very sensitive) a fan is located on top of the basic engine. The speed control is dependent on the ambient temp. A NTC resistor [3134] located on the display board measures the temperature. An operational amplifier [7902-B] generates a proper voltage, which is then fed to the engine ("BE_FAN"-line). Below 28°C ambient temp. the fanvoltage is approx. 5V and is increased to 10V when the ambient temperature goes up to approx. 38°C. The second part of the Op-Amp. [7902-A] prevents damage of any temperaturesensitive part in case the NTC or the wire in between is damaged. It acts as a comparator and pulls the "BE_FAN"signal to 10V. As the fan has to be stopped in case the tray of the drive is open this voltage is "killed" by the CC ("FAN_OFF"signal). The double-diode [6901] acts for both Op.-Amp.circuits. The circuit is also prepared for a set-fan (circuit around the Op-Amp. [7902-C]).

9.3 Analog board Europe

9.3.1 General

This PCB consists out of the following parts:

- Power-Supply-Unit
- Frontend (Audio & Video)
- Input-/Output-switching
- Audio ADC- & DAC-processing
- VPS/PDC- and Text-Data slicer
- Analog Follow-Me Circuit

All functional groups are either controlled via I2C-bus or via separate signal lines by the Central-Controller on the µP-Sub-Board. This sub board is directly soldered in onto the analog PCB. During Stand-By mode of the set, several parts are not supplied (Tuner, MSP, ...). The microprocessor is running and maintains the clock of the set.

To avoid bus blockades the I2C-bus ("SCLSW" & "SDASW") to/ from these units is decoupled via transistors [7419], [7420] from the general bus ("SCL" & "SDA").

9.3.2 Power Supply Unit

Functional principle:

This power supply works in the way of a flyback converter. In the mains input part [1931 to 2309], the mains voltage is rectified and buffered in the capacitor [2309]. From this direct voltage at [2309] energy is transferred into the transformer [5300, pins 7-5] during the conductive phase of the switching transistor [7307] and is stored there as magnetic energy. This energy is passed to the secondary outputs of the power supply in the blocking phase of the switching transistor [7307]. With the switch-on time of the switching transistor [7307], the energy transferred in every cycle is regulated in such a way that the output voltages remain constant regardless of changes in the load or mains voltage. The power transistor is driven by the integrated circuit [7313].

Mains input part:

The mains input part extends from the mains socket [1931] to the capacitor [2309]. The diodes [6301, 6302, 6305 and 6306] rectify the AC supply voltage, which is then buffered by the capacitor [2309]. The common mode coil [5302] and capacitor [2302] work as a filter to block interference arising in the power supply from the mains. Components [1302], [3306] and [3304] protect the power supply against short-term over voltages in the mains, e.g. caused by indirect lightning.

Start-up with Mains-on:

After connecting the power cord to the mains, the capacitor [2325] is loaded via a current source between pin 8 and pin 1 in the IC [7313]. Once the voltage on [2325] and therefore the supply voltage Vcc of the IC [7313] has reached approx. 11V, the IC starts up and provides pulses at its output pin 5. These pulses are used to drive the gate of the power transistor [7307]. The frequency of these pulses is depending on load and mains voltage. The current consumption of the IC is approx. 5 mA at Vcc in normal mode.

If Vcc drops to below approx. 9V (e.g. with power limitation) or if Vac exceeds approximately 16V (e.g. interruption of the control loop), the output of the IC [7313, pin 5] is blocked and a new start-up cycle begins. (See also "Overload, Power Limitation, Burst Mode" section)

Normal operation:

With the power supply in normal mode, the periodic sequences in the circuit are divided primarily into the conductive and blocking phase of the switching transistor [7307]. During the conductive phase of the switching transistor [7307], current flows from the rectified mains voltage at capacitor [2309] through the primary coil of the transformer [5300, pins 7-5], the transistor [7307] and resistors [3321, 3352] to ground. The positive voltage on pin 7 of the transformer [5300] can be assumed as constant for a switching cycle. The current in the primary coil of the transformer [5300] increases linearly. A magnetic field representing a certain value of the primary current is formed inside the transformer. In this phase, the voltages on the secondary coils are polarized such that the diodes [6300, 6303, 6307, 6308, 6310, 6313, 6317 and 6319] block. From the controller [7315] a current is supplied into the CTRL input on the IC [pin 3, 7313] via optocoupler [7314]. Once the switch on time of the switching transistor [7307] - that corresponds to the current supplied into the CTRL input - has been reached, the switching transistor [7307] is switched off. When the switching transistor has been switched off, the blocking phase begins. No more energy will be transferred into the transformer. The inductivity of the transformer will still attempt to keep the current flowing at a constant level (U=L*di/ dt). Switching off transistor [7307] interrupts the primary current circuit. The polarity of the voltages on the transformer is reversed, which means that the diodes [6300, 6303, 6307, 6308, 6310, 6313, 6317 and 6319] become conductive and current flows into the capacitors [2305, 2312, 2319, 2322, 2326 and 2328] and the load. This current is also ramp-shaped (di/dt negative, therefore decreasing).

The feedback control for the switched-mode power supply is done by changing the conductive phase of the switching transistor so that either more or less energy is transferred from the rectified mains voltage at [2309] into the transformer. The regulation information is provided by voltage reference [7315]. This element compares the 5V-output voltage via voltage divider [3332, 3333, 3334] with an internal 2.5V reference voltage. The output voltage of [7315] passes via an optocoupler [7314] for insulation of primary and secondary parts as a current value into pin 3 on the IC [7313]. The switchon time of the transistor [7307] is inversely proportional to the value of this current.

Overload, power limitation, burst mode:

With increasing load on one or more of the power supply outputs, the switch-on time for the power transistor [7307] increases, and thus also the peak value of the delta-shaped current through this power transistor. The equivalent voltage of this current profile is passed from resistors [3321] and [3352] via [3365] to pin 5 of the IC [7313]. If the voltage on pin 2 reaches approx. 0.4V in one switching cycle, the conductive phase of the switching transistor is ended immediately. The check is done in each individual switching cycle. This process ensures that no more than approx. 60W can be taken out from the mains (= power limitation).

If the power supply reaches the power limit, the output voltages and the supply voltage Vcc on pin 1 of the IC [7313] will be reduced following further loading. If Vcc is less than approx. 9V at any point during this process, the output of the IC [7313, pin 6] is blocked. All output voltages and Vcc decrease and a new start-up cycle begins. If the overload status or short-circuit remains, the power limitation will be activated immediately and the voltages will again decrease, followed by another start-up cycle (Burst Mode). The amount of power taken up from the mains in burst mode is low.

Standby modes:

In the 'AV-Standby' operating mode of the set, the 'ION' control line is primarily used to switch off all output voltages for Basic Engine and Digital Board (supplies 3V3, 5V, 12V, 5N and 4V6 at Connectors 1932 and 1933) of the power supply. This reduces the amount of power taken from the mains. In Low Power Standby mode additionally the 'STBY' control line is used to switch off output voltages 5SW and 8SW. This reduces power consumption to less than 3W, if additionally the display is switched off. The power supply will continue operating in Standby mode with a switching frequency of approx. 25 kHz.

9.3.3 Frontend

This unit is designed to support two basic versions, which are distinguished by a different assembly variant only (one for multistandard and the second for Pal-I only) and comprises the following parts:

- Tuner UV1316K [1705]
- IF amplifier & video demodulator IC TDA 9818/9817 [7710]
- Sound processor MSP3415G [7600]

Tuner and IF selection

The Tuner [1705] converts the RF-signal coming from the antenna input to an IF-signal. The tuner is fully controlled via I²C-bus of the CC-μP. [1705] is also equipped with a "passiveloop-through" between antenna-in and -out to save power in stand-by of the set, when the complete part is not supplied. The IF frequency of the video carrier is 38.9 MHz for all systems except SECAM L' (34,0 MHz).

A quasi-split audio system is used. Separate surface-wave filters (SAW) are required. [1701], [1703] for video, [1702] for audio. [1701] is switched into the signal path for DK/I-SECAM L/L' reception, if the signal "SFS_TS" is "high". In this case the switches [7704], [7705] are open and the diode [6703] is conducting. [1703] is switched into the signal path for BG reception ("SFS_TS" is "low"). Then the switch [7712] is open and the diode [6704] is conducting. For DK/I-SECAM L/L'

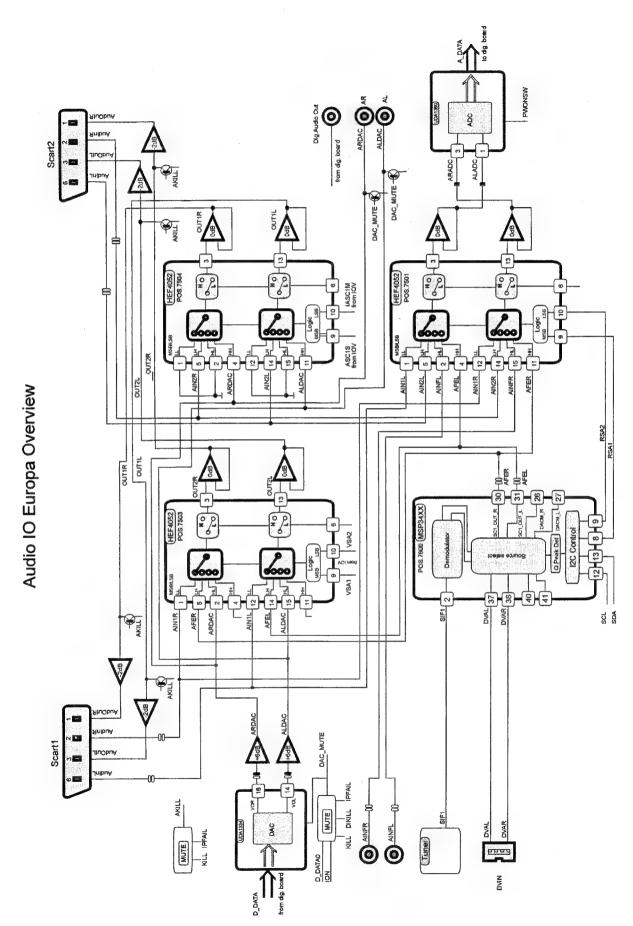

reception, an additional circuit for suppressing the audio carrier of the adjacent channel is used. This circuitry is adjusted by coil [5710] for maximum suppression at 40.4MHz.

IF demodulator

The signal from the tuner and IF-selection circuit is processed by the demodulator IC TDA 9818/9817 [7710]. The signal "PSS" to pin 3 switches between demodulation of positive (SECAM only) or negative modulated video carriers. A QSSaudio-IF signal SIF1 is generated for demodulation in the sound processor [7600]. The audio-IF carrier is selected in the audio SAW filter [1702]. This filter is switched for SECAM L'. If the signal "SB1" is "high", the switch [7714] is closed and the diode [6705] is not conducting. For all other standards the diode [6705] is conducting and the switch [7714] is open. The output signal of this SAW filter is firstly processed in the TDA 9818. Audio carriers are converted from the tuner IF level to the audio IF position and further processed in the audio demodulator [7600]. The AFC coil [5711] on the TDA 9818/ 9817 is adjusted so that when a frequency of 38.90 MHz is supplied to the IF output of the tuner, the AFC voltage on pin 17 of [7710] is 2.5V. The setting of the picture carrier frequency for SECAM L in the TDA 9818 is achieved by connecting pin 7 of the IC via a resistor [3710] to ground. The switch [7701] and the signal "SB1" do this. The HF-AGC is set using the potentiometer [3724] so that, with a sufficiently large antenna input signal (74 dB μ V), the voltage at the IF output of the tuner [1705] pin 11 is 500 mVpp. This setting must be carried out when the audio carrier is switched off. The demodulated video signal appears on pin 16 of [7710]. The AGC voltage at pin 4 is used to determine the antenna signal strength after a buffer [7717] with the signal "AGC" and an analog input port of the CC-P. The trap [1704] reduces the sound carrier remainders in the video for BG standards. The trap [1706] works in the same way for the Pal-I standard only. For all other standards the switch [7713] is closed via [7706] and "SFS_TS"-line set "high" to bypass this trap. In these cases the selectivity of the SAW filter [1701] is sufficient. The coil [5713] for non-BG standards realizes a frequency response correction. This correction is not desired for SECAM L' and therefore short-circuited by [7716] (signal SB1 is "high" and [7702] has on-status). The demodulated video signal "VFV" is available after the buffer and limiting stage for noise peaks [7711]. The FM-PLL demodulator function of TDA 9818 is not necessary and therefore deactivated by the resistor [3739].

Audio demodulator

The sound demodulation is done by the MSP3415 [7600], which is also fully controlled via I2C-bus by the CC-P (determination of bandwidth, amplitude, standard, ...). The audio signals are available at pin 30 and pin 31 of [7600] and fed as "AFER"- & "AFEL"-line to the audio-I/O for further processing.

The processing of audio is always done in stereo (e.g. separate left- and right-channel) and the complete switching is realized by using HEF4052, which is a dual four-to-one multiplexer. In principle there are three independent selectors:

a) Scart 1-Output-Path:

Pos [7504] is used to select either Scart 2-Input ("AIN2L"/ "AIN2R") or the signal directly from the audio DAC [7004] ("ALDAC"/"ARDAC") as the output source for Scart 1 ("AOUT1L"/"AOUT1R").

The control is done by means of the lines "ASC1S" coming from [7408] (IC [7408] acts as a port expander for the CC-P) and "IASC1M", which is directly coming from the CC. Pos [7412] is used for level adaptation (3V3 to 5V) for the "IASC1M"-signal.

b) Scart 2-Output-Path:

Pos [7503] selects between Scart 1-Input ("AIN1L"/"AIN1R"), signals from the internal frontend ("AFEL"/"AFER") via MSP [7600] or audio directly from the DAC [7004] ("ALDAC"/ "ARDAC"). The outputs of this switch are routed to Scart 2 ("AOUT2L"/AOUT2R"). This switch is controlled via "VSA1"and "VSA2"-line. These lines come from [7408] that is acting as a port expander for the CC-P.

c) Record-Path:

Pos [7501] selects either signals from Scart 1 ("AIN1L"/ "AIN1R") or Scart 2 ("AIN2L"/"AIN2R") or Cinch-Front ("AINFL"/ "AINFR") or the MSP [7600] ("AFEL"/"AFER") and routes to the audio ADC [7007] ("ALADC"/"ARADC") for record purposes. The switch is controlled via "RSA1"- and "RSA2"-signals. These signals come from the MSP [7600], which acts as a port expander of the CC-P. As there can also exist a fifth input in case of DV-In is present the corresponding analog audio signals from the DVIO-board are firstly routed via extra cable and connector [1960] to the MSP. The MSP acts as a preselector between audio from internal frontend or the DV-

Each of these three selectors ([7501], [7503] & [7504]) has a separate Op-Amp on the output for level-adaptationperformance- and line-driving-reasons. [7505-A & -B] for record, [7502-C & -D] for Scart 1-Output and [7502-A & -B] respectively for Scart 2. Every audio output line on the two Scart connectors can be "killed" (muted) by an extra transistors ([7506], [7508], [7509] &[7511]), which can be activated by the "AKILL"-line. This signal is generated by the circuit around [7404]/[7421] and is a combination of the "KILL"- from the CC-P and the "IPFAIL" of the power-supply-unit.

d) Line-Out-Path: see chapter 9.3.5

e) Digital Audio Output-Path without IOE-Print: Additionally to analog audio the set is also equipped with a digital output via cinch plug [1951]. The signal is generated on the dig. board and routed via audio interface cable and connector [1900] to the Ana-PCB. Here the "DAOUT"-line first passes a 6-fold inverter [7580] being used as a driver and for performance reasons (noise reduction, jitter, etc.). Afterwards a transformer [5580] is necessary to achieve the correct level and also to have a floating output with isolated ground before the signal is fed via [3580] to cinch plug [1951]. The capacitor [2580] performs an AC-coupling between connector- and setground.

f) Digital Audio Output-Path with IOE-Print: In case of usage of the IOE-print the digital audio signals (input and output) are directly routed from digital board via interface cable to plug [1920] on the IOE-print. The "DAOUT"-line is splitted into two signals, one for cinch out and one for optical out. The signal to cinch out first passes a 5-fold inverter [7250] being used as a driver and for performance reasons (noise reduction, jitter, etc.). Afterwards a transformer [5250] is necessary to achieve the correct level and also to have a floating output with isolated ground before the signal is fed via

[3259] to the cinch plug [1925] (or [1926-B] in case of option

"DIGITAL IN"). The capacitors [2256] and [2266] perform an AC-coupling between connector- and set-ground. The second "DAOUT"-signal is fed directly via [3264] to the optical out transmitter [6255].

g) Digital Audio Input-Path with IOE-Print: There are two possibilities for a digital audio input signal in case of option "DIGITAL IN". One is the signal from the optical receiver [6259], which is routed via [3269] directly to plug [1920]. The second is the signal from the cinch plug [1926-A]. This signal then passes an inverting amplifier [7250-6] and is then routed via [2253] to the plug [1920].

9.3.5 Audio ADC/DAC

a) PCBs with AD1852 [7004]:

The conversion of analog audio signals from the recordselector [7501] in the I/O ("ALADC"- & "ARADC") is done via UDA1361TS [7007]. This IC can process input signals up to 2Vrms by using external resistors [3047], [3053] in series to the input pins. As the level from the DVIO-Board is only 1Vrms a 6dB step can be performed by setting pin 7 of [7007] to 3,3V via [7008] and the "PWONSW"-line controlled by the CC-P to use the whole dynamic range of the ADC. All required clock signals are generated on the dig. board and only the audio data ("A_DAT"-line) are routed from Ana- to Dig.-PCB for further

The transformation of dig. audio back into the analog domain is done by AD1852 [7004]. All necessary clock signals are coming from the dig. board and dig. audio data ("D_DATAO"line) are converted into analog signals, which are available at pin 17/16 and pin 12/13 of [7004] as symmetrical signals. Afterwards an Op-Amp. [7003] (line driver & converting to unsymmetrical signal, gain = 1), which is also working as lowpass-filter to increase signal performance (noise, distortions,...), is passed. Then both signals ("ALDAC" & "ARDAC") are directly routed to the rear cinch output and also used in the audio-I/O for further processing. The DAC has also a mute possibility, which can be activated by setting pin 23 to 5V via [7001]. This mute is controlled either by the dig. board ("D_IKLL"-line) or the "IPFAIL"-signal from power-supply-unit (in this case it's the combination of "A_KILL" and "IPFAIL"), If the DAC is muted externally via pin 23 or if there are no audio data available (e.g. "D_DATA0"-line zero), the output pins 8 and 22 of the DAC change to high (+ 5V). These two signals are then combined with diode pos. 6006. After decoupling via [7009] the signal "DAC_MUTE" is used as mute signal for the mute transistors [7415], [7416] for cinch rear out.

b) PCBs with UDA1334BTS [7001]:

The conversion of analog audio signals from the recordselector [7501] in the I/O ("ALADC"- & "ARADC") is done via UDA1361TS [7005]. This IC can process input signals up to 2Vrms by using external resistors [3039], [3041] in series to the input pins. As the level from the DVIO-Board is only 1Vrms a 6dB step can be performed by setting pin 7 of [7005] to 3,37 via [7006] and the "PWONSW"-line controlled by the CC-P to use the whole dynamic range of the ADC. All required clock signals are generated on the dig. board and only the audio data ("A_DAT"-line) are routed from Ana- to Dig.-PCB for further

The transformation of dig. audio back into the analog domain is done by UDA1334BTS [7001]. All necessary clock signals are coming from the dig. board and dig. audio data ("D_DATAO"line) are converted into analog signals, which are available at pin 14 and pin 16 of [7001]. Afterwards an Op-Amp. [7002] (line driver & level adaptation, gain = 2) which is also working as low-pass-filter to increase signal performance (noise, distortions,...), is passed. Then both signals ("ALDAC" & "ARDAC") are directly routed to the rear cinch output and also used in the audio-I/O for further processing. The DAC has a lso a mute possibility, which can be activated by setting pin 8 to 3,3V via [7003]. This mute is controlled either by the dig. board

("D_IKLL"-line) or the "IPFAIL"-signal from power-supply-unit (in this case it's the combination of "A_KILL" and "IPFAIL"). In addition to that the DAC [7001] and the cinch outputs can be killed (muted) in case of "digital silence" by the circuit around [7008], [7009] and [7010], when no audio data are available (e.g. "D_DATA0"-line zero).

This function can be also activated via the "ION"-line (set to high during any stand-by mode). To avoid signal distortions (clipping) the mute transistors for cinch rear out [7415], [7416] are decoupled via [7011].

9.3.6 Video-routing

9. •

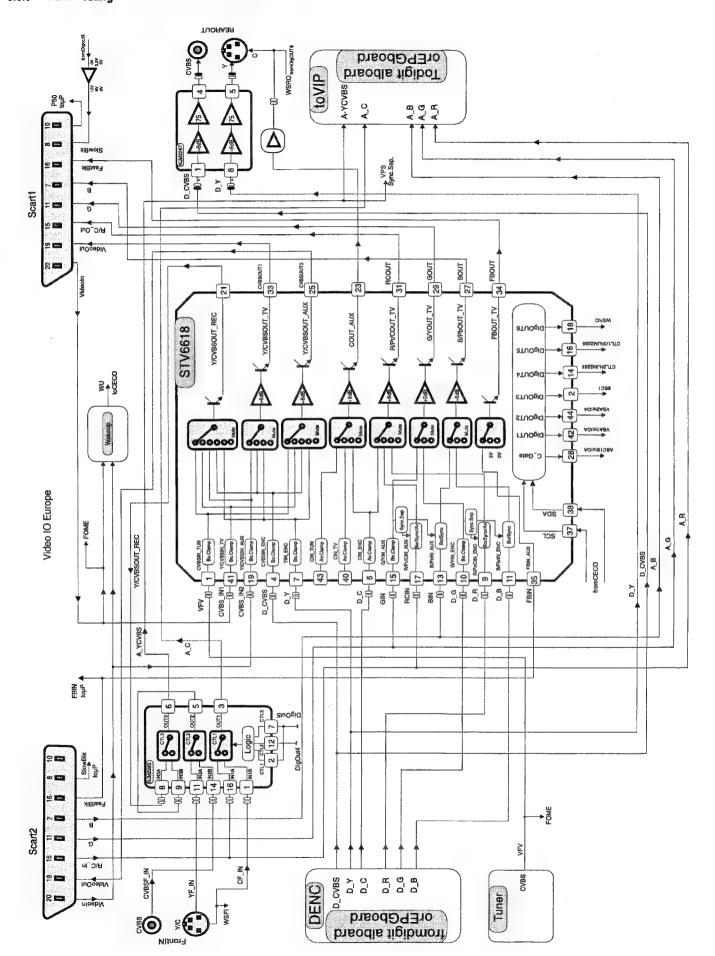

Figure 9-1

The Video-I/O-switching is basically realized by the matrix switch STV6618 [7408], which is controlled via I2C-bus by the CC. All used outputs excluding pin 21 (Y/CVBS-REC) have a 6 dB-amplification and a 75 Ohms driver-stage inside. This IC includes also several digital outputs, which are used for switching purposes on the analog board. The record selector inside the switch selects between the CVBS from frontend ("VFV"), the input from Scart 1 ("YCVBSIN1") or the signal from Scart 2 ("YCVBSIN2"). Afterwards the signal passes another switch [7411] in which a selection between signals from the front or the preselected ones are done. The output signals of [7411] are fed as "A_YCVBS"- and "A_C"-line to the digital board for further processing.

To reduce the number of external presets there exists only one preset for CVBS- and Y/C-front. The set automatically detects between the two inputs depending on the presence of a video signal (sync separator-circuit on µP-sub-board) where Y/C has higher priority.

The R/G/B-inputs and the Fast-Blanking-line from Scart 2 are routed over the optional EPG board to the digital PCB. Also all other video signal from the analog board are routed through the EPG board if present. These signals are also available on the corresponding input-pins of the STV6618 to enable a loopthrough in AV-Standby. In this mode the set has to behave like a cable between the two Scart-connectors. AV-Standby is activated either by a "high" level on pin 8 of Scart 2 ("active device is present") or by the "WU"-line (wake up). This signal is generated out of the circuit around [7401], [7402] & [7403] and will become "high" if there is a signal on pin 20 of Scart 1- or Scart 2. The detection of the input level on pin 8 of Scart 2 ("8SC2") is done via an analog input of the CC-P (less than 2V means inactive; 4,5V to 7V determines a source with 16:9 picture-ratio and greater than 9,5V is an active 4:3 source). All signals from the digital board ("D_R", "D_G", "D_B", D_C", "D_Y" and "D_CVBS" are routed to the proper inputs of the STV6618 for amplification and driving purpose before they can be seen on the appropriate Scart outputs. In case of EPG the signals from the digital board are routed through the EPG board where the selection between digital board video or EPG OSD is taken.

The "D_CVBS"- and the "D_Y"-line are passing a 6 dBamplifier and driver-IC [7410] and are then routed to the CVBS-Cinch and Y/C-out rear. The chroma signal for this Y/C out is coming from the STV6618 - which makes the 6 dBamplification - and a driver [7406] in between.

The detection of the picture ratio information on the Y/C-input front is made by measuring the DC-level on the Chroma signal via analog input of the CC-P ("WSFI"-line). In case the level is higher than 3,5V the input signal is a 16:9 source. If the level is lower than 2,4V the picture ratio is 4:3.

For generation of the appropriate DC-voltage on the Y/C-out rear the "WSRO"-line is controlled via pin 18 of [7408] by the CC-P (Pin 18 set to low means 4:3, pin 18 set to high determines 16:9).

The control of the switching voltage (Pin 8 of Scart 1) is done via 3-level-pin (nr.2) of the STV6618 [7408] and the transistors [7405], [7407] & [7409]. A "low" on pin 2 of [7408] causes around 11V on pin 8-Scart 1 (e.g. source with 4:3 picture-ratio active). Medium level (2,5V) on pin 2 of the STV6618 generates medium level (approx. 6V) on pin 8-Scart 1 (e.g. active source with 16:9) and a "high" on pin 2 of the STV6618 pushes pin 8-Scart 1 to "low" (e.g. inactive).

VPS/PDC- and Text-Datasticer 9.3.7

For extraction of relevant information out of the video signal (time controlled recording, net-name-identification, time- & date-download) the STV5348 [7931] is used. Data transfer to/ from the CC is fully done via I2C-bus and the input signal for decoding is the same as the one being routed to the digital board for recording purposes ("A_YCVBS"-line).

Analog Follow-Me 9.3.8

This circuit compares the video signal from the internal frontend ("VFV") of the recorder with that one of the connected TV-set ("CVBS1"). The TV set delivers the signal via Scartcable. A comparator [7934] and several additional parts ([7932], [7933], ...) are used to compare the two video signals. In case of both input signals are equal the output-line of this circuit ("FOME") is set to low. Detection is made via an input port of the CC-P.

Analog board NAFTA- & APAC-Pal- version

Frontend NAFTA 9.4.1

[1701] demodulates the video signal from the antenna input. Tuner and IF-demodulator are in one unit. Also a modulator is included in that part. The audio- and video-signal to the modulator are the ones from the selected input or the playback path of the set ("AMCO"- and "D_CVBS"-line). The control of the tuner is fully done via I2C-bus by the CC-P. Via the "MSW"signal and [7701] the modulator is switched on and off. In opposite to this the antenna loop-through is opened or closed. In the APAC-Pal version POS [1700] is used with the difference that if demodulates only PAL- instead of NTSC-signals and has also no modulator. The "CSW_SSW" line switches the modulator between CH3 or CH4 in the NTSC-version. To achieve optimal tuning the "AFC"-signal is detected by the CC via an analog input; [3701], [3702] and [3703] are used for level adaptation (5V to 3V3). Pos [7700] is a driver for the video

The sound demodulation is realized by the MSP34x5 [7600], which is also fully controlled via 1^2 C-bus by the CC-P (determination of bandwidth, amplitude, standard, ...). The audio signals are available at pin 30 and pin 31 of [7600] and fed as "AFER"- & "AFEL"-line to the audio-I/O for further processing. As this PCB is used for different regions (NAFTA and APAC) either MSP3425 or MSP3415 are assembled.

Audio IO NAFTA / APAC Overview

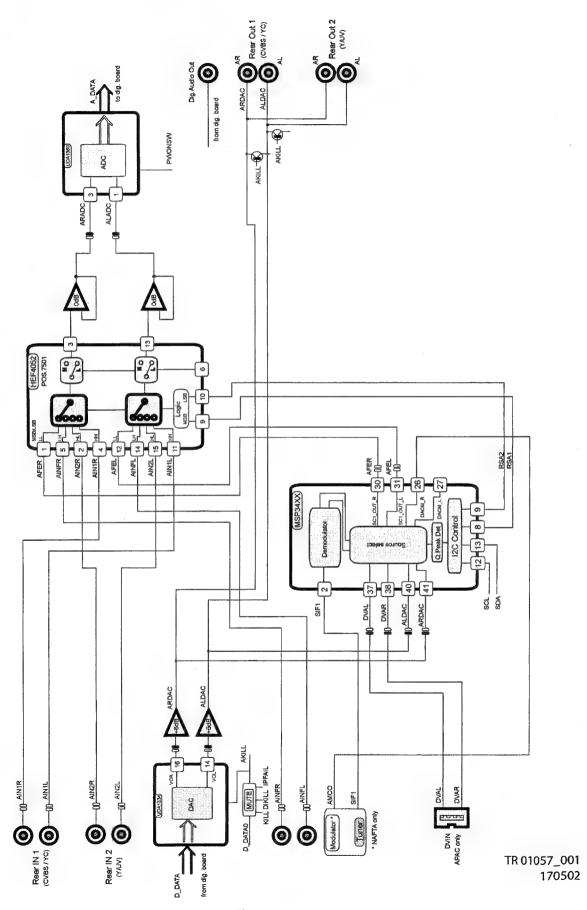

Figure 9-2

The sound processing is always done in stereo (that means separate left- and right-channel).

a) Record-Path:

The complete selection of the audio signal for recording is done by a HEF4052 [7501], which is a dual four-to-one multiplexer. The input lines for the selector [7501] are coming either from MSP [7600] ("AFEL"/"AFER") or cinch rear in 1 ("AIN1L"/"AIN1R") or cinch rear in 2 ("AIN2L"/"AIN2R") or the cinch in front ("AINFL"/AINFR"). The [7501] is controlled via "RSA1"-and "RSA2"-signals coming from the MSP [7600]. The MSP acts as a port expander of the CC-P. The Op-Amp on the output [7504] is necessary for performance reasons and acts also as a driver. The selected signals "ARADC" and "ALADC" are directly fed to the Audio-ADC.

As there can exist also a fifth input in case of DV-In is present the corresponding analog audio signals from the DVIO-board are firstly routed via extra cable and connector [1960] to the MSP, which acts as a preselector between audio from internal frontend or the DV-Input.

- b) Line-Out-Path: see chapter 9.4.3
- c) Digital Audio Output-Path without IOE-Print:
 Additionally to analog audio the set is also equipped with a digital output via cinch plug [1951]. The signal is generated on the dig. board and routed via audio interface cable and connector [1900] to the Ana-PCB. Here the "DAOUT"-line first passes a 6-fold inverter [7580] being used as a driver and for performance reasons (noise reduction, jitter, etc.). Afterwards a transformer [5580] is necessary to achieve the correct level and also to have a floating output with isolated ground before the signal is fed via [3580] to cinch plug [1951]. The capacitors [2580], [2582] and [2583] perform an AC-coupling between connector- and set-ground.
- d) Digital Audio Output-Path with IOE-Print: see chapter 9.3.4.f
- e) Digital Audio Input-Path with IOE-Print: see chapter 9.3.4.g

9,4.3 Audio ADC/DAC

The conversion of analog audio signals from the record-selector [7501] in the I/O ("ALADC"- & "ARADC") is done via UDA1361TS [7005]. This IC can process input signals up to 2Vrms by using an external resistor [3039], [3041] in series to the input pins. As the level from the DVIO-Board is only 1Vrms a 6dB step can be performed by setting pin 7 of [7005] to 3,3V via [7006] and "PWONSW"-line controlled by the CC-P to use the whole dynamic range of the ADC. All required clock signals are generated on the dig. board and only the audio data ("A_DAT"-line) are routed from Ana- to Dig.-PCB for further processing.

The transformation of dig. audio back to the analog domain is done by UDA1334BTS [7001]. All necessary clock signals are coming from the dig. board and dig. audio data ("D_DATA0"line) are converted into analog signals, which are available at pin 14 and pin 16 of [7001]. Afterwards an Op-Amp. [7002] (line driver & level adaptation) which also works as a low-pass-filter to increase signal performance (noise, distortions,...) is passed. Then both signals ("ALDAC" & "ARDAC") are directly routed to the rear cinch output. The DAC has also a mute possibility, which can be activated by setting pin 8 to 3,3V via [7003]. This mute is controlled either by the dig. board ("D IKLL"-line) or the "IPFAIL"-signal from power-supply-unit. In addition to that the DAC [7001] and the cinch outputs can be killed (muted) in case of "digital silence" by the circuit around [7008], [7009] and [7010], when no audio data are available (e.g. "D_DATA0"-line zero).

The signals from the audio DAC part ("ARDAC"/"ALDAC") are directly routed to both cinch rear outputs, which are connected

in parallel. To avoid plops and any other audible noise on the output there is a mute-stage implemented [7509], [7511] for each channel. The activation is done via "AKILL"-line, which is a combination of the "KILL" from CC-P, "DAC_MUTE" from DAC-part and "IPFAIL" from the power-supply-unit. The circuit around [6430], [6431], [7430] and [7404] generates this signal.

9.4.4 Video-routing

EN 198

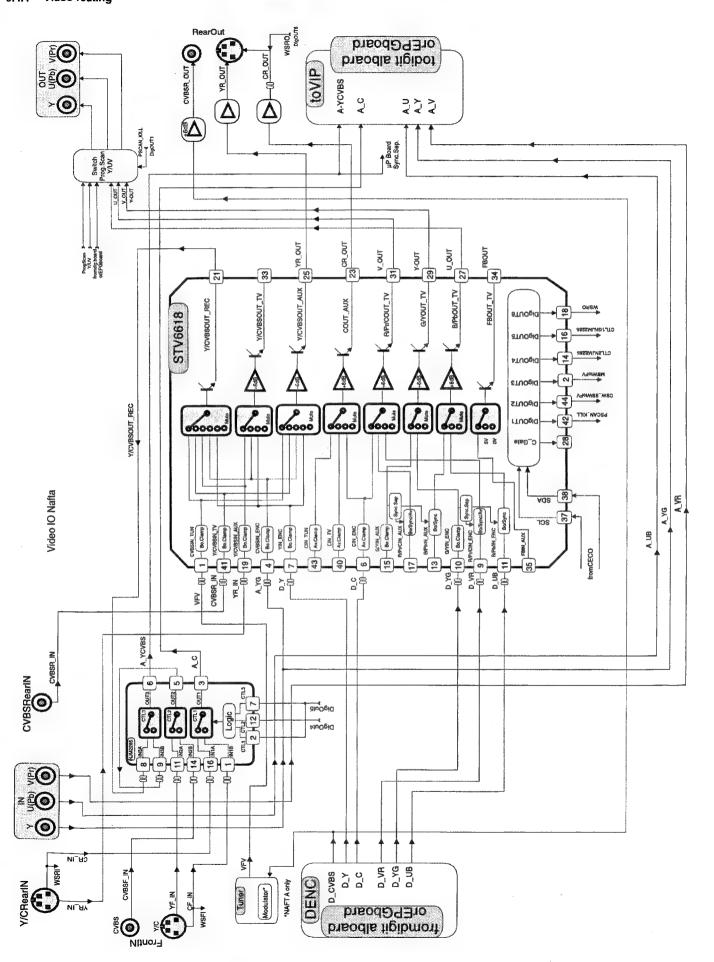

Figure 9-3

The Video-I/O-switching is basically realized by the matrix switch STV6618 [7408], which is controlled via I²C-bus by the CC. All used outputs excluding pin 21 (Y/CVBS-REC) have a 6dB-amplification and a 75 Ohms-driver-stage inside. This IC also includes several digital outputs, which are used for switching purposes on the analog board. The record selector inside the switch selects between the CVBS from frontend, the CVBS from Cinch-Rear or Y from the S-Video-input rear. Afterwards the signal passes another switch [7411] in which a selection between signals from the front or the preselected ones is done. The output signals of [7411] are fed as "A_YCVBS"- and "A_C"-line to the digital board for further processing.

To reduce the number of external presets there is only one station for CVBS or Y/C (front and rear). The set automatically detects between the two inputs depending on the presence of a video signal (sync separator-circuit on μ P-sub-board) where Y/C has higher priority.

The Y/U/V-inputs are routed over the optional EPG board to the digital PCB. Only the Y-line has to be present additionally on pin 4 of [7408] for video recognition. Also all other video signal from the analog board are routed through the EPG board if present

The signals "D_C" and "D_Y" are fed through [7408] (6dB amplification) and via [7406], [7409] used as driver to the S-Video output connector. The "D_CVBS" line is directly routed to the modulator and via the circuit around [7431] and [7432] amplified by 6dB before it is fed to the CVBS output plug. In case of EPG the signals from the digital board are routet through the EPG board where the selection between digital board video or EPG OSD is taken.

The Y/U/V signals from the digital board are also passing [7408] for 6dB amplification and driving purpose.

To achieve optimal picture quality the set is equipped with a simple progressive scan function based on a so-called line doubler. The complete generation of the signal is done on the digital board and via a separate cable and connector [1946] the corresponding Y/U/V lines are routed to the analog PCB. Also the YUV progressive signals are switchable to EPG OSD on the EPG board if implemented. As there is only one Y/U/V output available a switching between interlaced and progressive output is necessary. While the transistors [7421], [7422], [7424], [7425], [7427] and [7428] are used as driver for Y/U/V progressive, [7423], [7426] and [7429] together with [7405] are necessary for killing these signals via pin 42 of [7408] in case the interlaced is selected ("PSCAN_KILL"-line set to low). If progressive output is active the pins 27, 29 and 31 of [7408] are set to high impedance and "PSCAN_KILL" is also high (e.g. 5V).

The detection of the picture ratio information on the Y/C inputs (rear or front) is done by measuring the DC-level on the Chroma signal via an analog input of the CC-P ("WSRI"- and "WSFI"-line). In case the level is higher than 3,5V the input signal is a 16:9 source, if the level is lower than 2,4V the picture ratio is 4:3.

For generation of the appropriate DC-voltage on the Y/C output the "WSRO"-line is controlled via pin18 of [7408] by the CC-P (Pin 18 set to low means 4:3, pin 18 set to high determines 16:9).

During Stand-By there is also no loop-through of any input to any output performed.

9.5 Digital Board

9.5.1 Record Mode

Video Part

Analog Video input signals CVBS, YC and UV(RGB for EURO and YUV for USA) are routed via the analog board to connector 1601 and sent to IC7500 SAA7118 (Video Input Processor). Digital video input signals (DV_IN_DATA(7:0)) are sent from the DIVIO board through the connector 1603 and further also to IC7500.

IC7500 (VIP) encodes the analog video to digital video and processes the digital video to a digital video stream (CCIR656 format). This output stream (VIP_YUV[7:0]) goes to IC7403 SAA6752H (EMPRESS) and to IC7100 Versatile Stream Manager. The latter uses the data for VBI (vertical blanking interval) extraction.

IC7403 (EMPRESS) encodes the digital video stream into a MPEG2 video stream that is fed to IC7100 (VSM).

Audio Part

I2S audio are sent from the analog board to IC7403 EMPRESS via connector 1602. The EMPRESS compresses I2S audio data into an AC3 audio stream which is fed to IC7100 (VSM).

Front-End I2S

IC7100 (VSM) interfaces directly to the different hardware modules such as Basic Engine, EMPRESS IC7403, MPEG decoder IC7200 (Sti5508) and buffers the data streams that are coming from or going to these hardware modules. In IC7100 (VSM), the video MPEG2 stream and the audio AC3 stream are multiplexed into a I2S packetized stream. The serial data are sent to the Basic Engine to be recorded.

Loop-Through

The multiplexed audio and video stream in the VSM is fed back via the parallel front-end interface to IC7200 (Sti5508). This IC decodes the MPEG stream into analog video and I2S audio. The video and audio signals are routed to the analog board via connectors 1601 and 1602. During recording, the recorded signal is present at the outputs of the analog board.

9.5.2 Playback Mode

During playback, the serial data from the Basic Engine is going directly to the Sti5505 via the serial front-end I2S interface. The Sti5508 is a MPEG & Audio/video decoder and has the following outputs:

- To the analog board:
 - analog video RGB, YC, CVBS
 - I2S audio (PCM format)
 - SPDIF audio (digital audio output)
- To the Progressive scan board:
 - digital video YC(7:0).

9.5.3 S2B Interface

The S2B interface between the VSM (IC7100) and the Servo processor MACE3 controls the Basic Engine during record and playback mode.

9.5.4 System Clock

System clocks(27MHz) of VSM, Sti5508, EMPRESS and Progressive Scan are generated by oscillator 7906

9.5.5 Audio Clock

During record mode, the audio clock ACC_ACLK_OSC is generated by IC7102 (PLL) because then, the audio clock must be sychronized with the incoming video (VIP_FID) from the VIP

During playback mode, the audio clock ACC_ACLK_PLL is generated by the clock synthesizer IC7900 (MK2703S). Both ACC_ACLK_OSC(also goes to the EMPRESS as ACLK_EMP) and ACC_ACLK_PLL are fed to the VSM. This IC selects the appropriate clock to the STI5508. The EMPRESS IC derives from the incoming ACLK_EMP the I2S audio encoder clocks AE_BCLK and AE_WCLK which are sent to the VSM.

9.5.6 On/Off

The digital board is not powered in standby mode. Control signal ION, coming from the analog board, will enable the PSU and power the digital board.

- ION = High: the digital board is in powered down standby mode
- ION = Low: the power supply to the digital board is enabled

9.5.7 Reset

Control signal IRESET_DIG, controlled by the microprocessor on the analog board is sent to the RESET LOGIC circuit.

- IRESET_DIG = Low in standby mode
- IRESET_DIG = High: the whole system is reset and the Digital board is waked up.

9.5.8 I2C Bus

Sti5508 is master of the I2C bus. The following IC's are controlled by the I2C bus:

- IC7201 NVRAM
- IC7403 EMPRESS
- IC7500 VIP
- IC7700 FLI2200 Video Deinterlacer Line Doubler
- IC7801 ADV7196 Video Denc

EMI Bus 9.5.9

The following IC's are connected to the External Memory Interface bus (EMI) which functions as system bus:

- IC7301 and 7302: Flash memories which contain the application and diagnostic software
- IC7100: VSM
- IC7200: MPEG AV Decoder

Block Diagram Digital Board

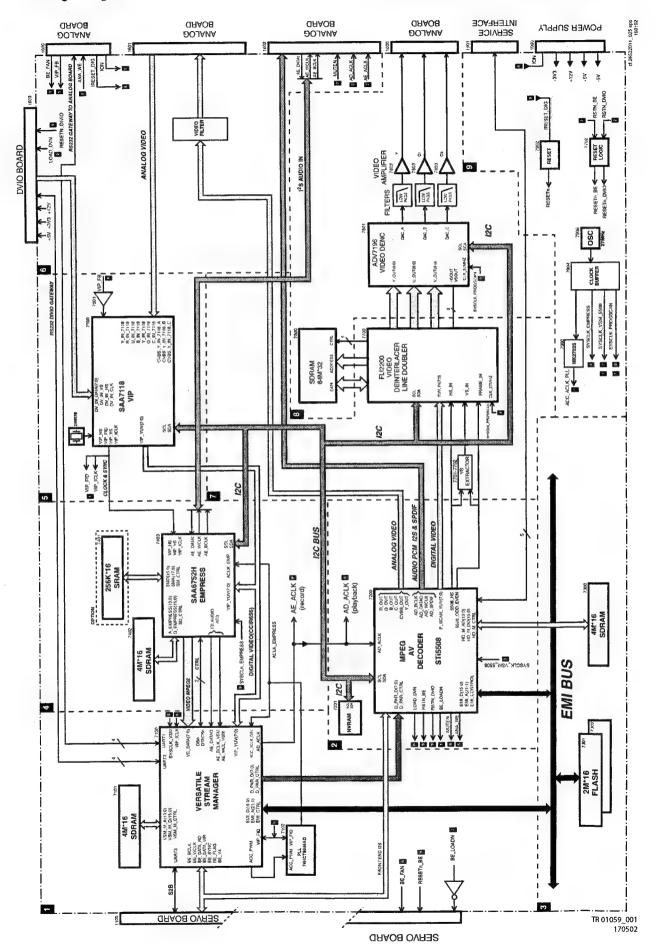

Figure 9-4

9.5.10 Progressive Scan

Description

The progressive scan part is integrated in the Digital Board and built around the SAGE Fli2200 de-interlacer / line doubler (7701). This I2C controlled de-interlacer uses a 64Mbit SDRAM (32bit x 2M) to perform high quality deinterlacing (meshing). The de-interlacer gets his digital YUV input data from the STi5508 (7200). The format of the digital YUV input to the SAGE is CCIR656 with separated Hsync, Vsync and odd/even signal running on 27Mhz.

Because the STi5508 doesn't have a Vsync output the odd/ even output of this IC has to be translated to a Vsync signal. Some glue logic has been added to extract the vertical sync. The glue logic circuit consists of Flip-Flop IC 74HC74D (7701) and EXOR 74LVC86 (7702). The next diagram shows how the vertical sync is extracted.

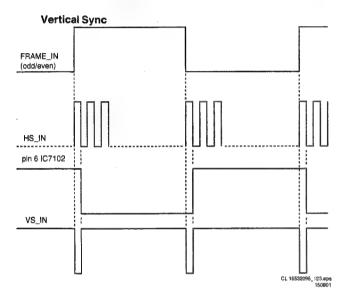

Figure 9-5

The output of the de-interlacer (4:4:4 progressive video) is fed to the Analog Devices ADV71967 MacroVision compliant

The YUV current output of the DENC is fed via a low pass filter to the single supply output opamps AD8061/8062 (7802-7803). The analog video is fed via a 7 poled flex to the analog board where the YUV 2FH cinch connectors are located.

9.6 Divio 1.8 Board

9.6.1 **Short Description of the Module:**

The DVIO Module is a decoder for DV streams. Input is a stream from a DV-camcorder via IEEE1394. Outputs are CCIR656 Video and Analog audio (L+R). A serial control interface is present.

The following picture shows the location of the DVIO Module inside the DVDR set.

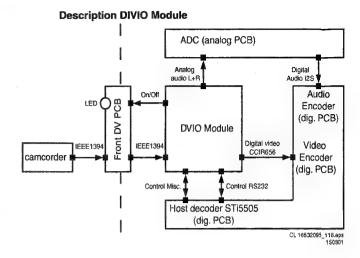

Figure 9-6

9.6.2 Block Diagram

Block Diagram DVIO1.8

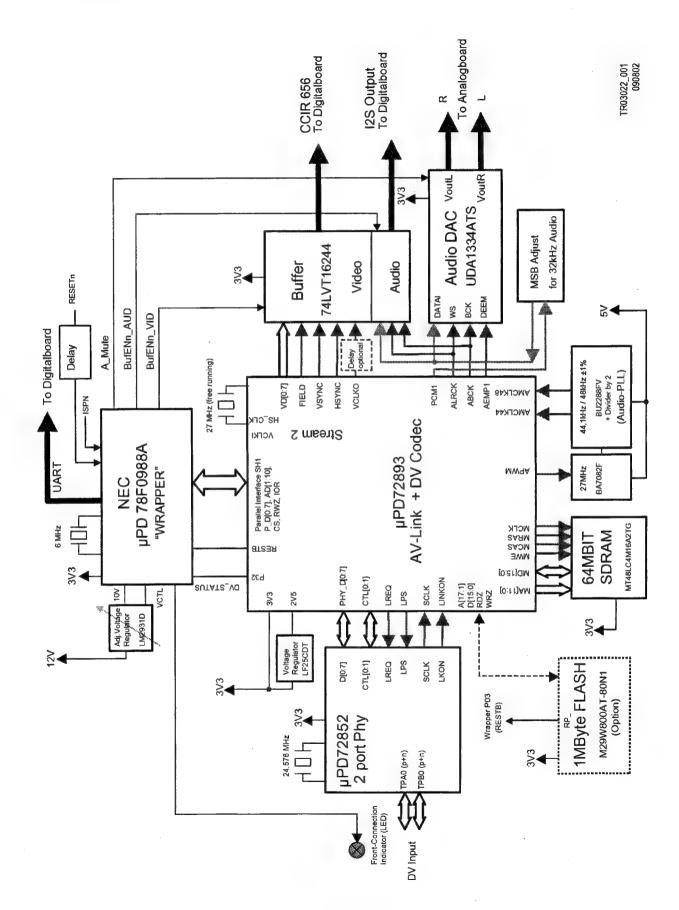

Figure 9-7

EN 204

9.6.3 **Functional Description**

The DVIO module consists of the following blocks (see blockdiagram):

- 1. IEEE1394 Interface
 - uPD72852 (7400) (Phy)
 - uPD72893 (7431) (Link part)
- 2. Micro-controller
 - uPD78F0988 (7802)
 - Voltage regulator LM2931 for generation of 10V programming voltage (7801)
- 3. Reset-circuitry
 - Power-on reset
 - Reset pulse-shortener
- 4. DV-Decoder
 - uPD72893 (7431) (Codec part)
 - 16MBit SDRAM (7430)
 - optional Flah-Memory M29W800AT for Firmware-Update of uPD72893 (7432)
- 5. Clocking & Audio PLL
 - Clock oscillator FXO-31FT (7601)
 - Audio-PLL: Voltage controlled oscillator BA7082F (7604), clock generator BU2288FV (7605), and clock divider 74LV74 (7606-A)
- 6. Audio Format adaption (MSB justified -> I2S), option
 - 74LV74 (7507-A, -B)
- Audio & Video output
 - Audio DAC UDA1334ATS(7602)
 - Clock delay(7500)
 - Tristate buffer(7505)

IEEE1394 Interface

The 1394 interface consists of a uPD72852 physical layer and a uPD72893 link layer IC (uPD72893 integrated also DV-Decoder).

It has the following features:

- S400 operation (400 megabit per second)
- Two i.Link ports (4 pin), only one used
- AV link port

Micro-Controller

The uPD78F0988 processor has following extra features:

- 60 kilobyte of flash memory as program memory
- 2 kilobyte of internal data memory
- watchdog timer
- On board ISP(In-System-Programming) functionality

By use of In-System-Programming, it is possible to update the software of the DVIO board that is in the uPD78F0988. ISP can be made active by resetting the processor and keeping the ISPN pin low during reset. During ISP, the ISPN signal on the board has to be kept low. A programming voltage of 10V is activeted by the uPD78F0988 itself at the Vpp pin before programming procedure starts. When the ISP mode is active, the new program can be sent to the microprocessor through the serial port.

Reset-circuitry

The reset-circuitry consists of two parts.

First part (around transistor 7803) generates a reset pulse when the board is powered up.

Second part (around transistors 7804 & 7805) acts as a resetpulse shortener, i.e. a short reset pulse (4ms) is generated from the input signal RESETn which is much longer (usually 100ms). This is required to ensure correct operation of the Micro-controller after booting-up when RESETn is again deactivated

DV-Decoder

The uPD72893 decodes the stream into video data in 656 format and audio data in I2S format.

The microprocessor has the ability to read the status registers of the uPD72893. By reading these registers, extra data from

the DV stream, that is not decoded into audio or video, can be sent to the digital board using pin TXD of the serial interface. This data includes time stamp and some more.

Clocking and Audio PLL

The FXO-31FT generates the free-running 27MHz system clock. Video part of input DV-stream is in the uPD72893 adapted to the local 27MHz clock domain (skip, repeat frame). Because audio clock (11.2896Mz [fs=44.1kHz] or 12.288MHz [fs=32kHz, 48kHz]).

The uPD72893 integrates the phase comparator that drives the VCO BA7082F to a nominal frequency of 27MHz which in turn is converted by BU2288FV and 74LV74 to 11.2896MHz or 12.288Mhz, respectively.

The uPD72893 controls directly the frequency ratio of the BU2288FV.

Audio Format adaptation (MSB justified -> I2S), option

Due to a bug in 1st version of uPD72893 digital audio output is not correct in I2S mode when in 32kHz operation. As a workaround uPD72893 is generally configured in MSB justified mode and conversion to I2S mode is done externally via a 74LV74 device.

Can be disabled with later versions of uPD72893.

Audio & Video Output

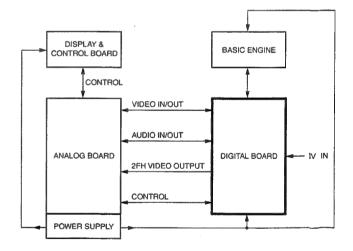

The audio I2S data are sent to audio DAC UDA1334. Analog audio left and right signals are connected to the analog board. The tri-state buffer enables the digital video stream to the Video Input Processor on the digital board when the DV source is selected.

The clock delay synchronizes the AV clock with the AV data at the output.

9.7 Digital Board Chrysalis 2.1

9.7.1 Introduction

Block diagram 2nd generation DVD recorder

CL USBURA_G 57 694 \$ 4920)

Figure 9-8

This 2nd generation Digital Board is based on the highly integrated 'Chrysalis' IC. Its predecessors, the 'Empire' and 'Empress' based boards, had two PWBs mounted on top of each other (due to separate DVIO board). For this new generation, all functionality is now available on one PWB in one BGA IC (Ball Grid Array) i.s.o. four VLSI ICs.

The board encodes and multiplexes analogue video and digital uncompressed audio (I2S) into an MPEG2 stream. This MPEG2 stream is formatted, to be recorded by the DVD+RW engine. In playback, the board will decode the MPEG2 stream into analogue and digital audio and into analogue video. In addition, a DV stream can be received via IEEE1394 (i-Link), and transformed to MPEG2 format.

There are versions foreseen, to generate a progressive scan analogue video output. In the standard Chrysalis board, the progressive video output is generated by the PNX7100. In the Chrysalis 'F' it is generated by the Faroudja FLi2301.

The Chrysalis Digital board is pin compatible with the Empress digital board in terms of A/V IO, BE interface, Power Supply, and Service interface. For functional enhancements, several connectors are added:IDE connector (HDD, AV3, PCMCIA, etc.)

9.7.2 Record Mode

Block diagram Chrysalis Digital Board

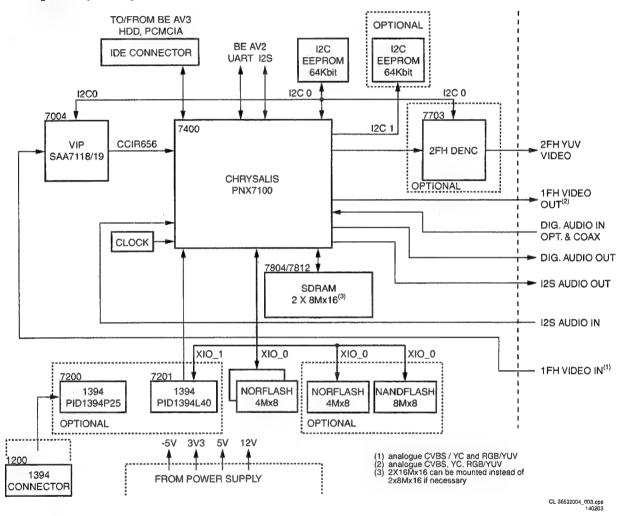

Figure 9-9

Video Part

The analogue video input signals CVBS, YC, and YUV/RGB (RGB for EURO and YUV for USA), are routed via the analogue board to connector 1904 and sent to IC7004 (SAA7118, Video Input Processor).

The digital video input signals are routed from the DV-In connector (item 1200) via ICs 7200 (1394 PHY) and 7201 (1394 LINK) to IC7400 (PNX7100, Chrysalis).

The multistandard Video Input Processor (VIP, IC7400) encodes the analogue video to digital video stream (CCIR656 format). It provides filtering of the analogue signals and separation of luminance and chrominance by a comb filter. The output stream, named ITU_IN(7:0), is then routed to the Chrysalis IC (PNX7100). This IC encodes and decodes the digital video stream into/from MPEG2 format.

Audio Part

I2S audio is sent from the analog board to the Chrysalis IC via connector 1900. The Chrysalis compresses the I2S audio data into an MPEG1-L2/AC3 audio stream.

Front-end I2S

IC7400 (Chrysalis) interfaces directly to the Basic Engine (BE) via connectors 1100 (clock and data) and 1105 (control). For future use (with AV3 BE module, HDD, or card reader) ii also interfaces to an IDE bus via connector 1102.

It buffers the data streams that are coming from (or going to) these hardware modules.

In the Chrysalis, the video MPEG2 stream and the audio AC3 stream are multiplexed into an I2S stream. The serial data are sent to the Basic Engine for recording.

EN 206

Playback Mode 9.7.3

During playback, the serial data from the Basic Engine is going directly to the PNX7100 via the serial front-end I2S interface. The PNX7100 is an MPEG CoDec and has the following outputs:

- To the analogue board: analogue video RGB, YC, CVBS on connector 1904.
- I2S audio (PCM format) on connector 1900.
- SPDIF audio (digital audio output) on connector 1904.
- Progressive video on connector 1704.
- Communication gateway (RS232) on connector 1104.

9.7.4 Basic Engine Interfaces

AV2 Basic Engine (VAE8015 and VAE8020)

The UART interface (for the S2B commands) between the Chrvsalis and the servo processor (MACE3 on the BE module), controls the AV2 Basic Engine during record and playback mode. For data transport, an I2S bus is used. For detailed information on the AV2 BE module, see Service Manual 3122 785 12470.

AV3 Basic Engine (VAE8030)

To be prepared for new developments, the Chrysalis Digital Board is equipped with two IDE busses (ATAPI). They can be used for connecting to the new generation Basic Engine (e.g. the AV3), a Hard Disc Drive (HDD), or a Smart Card Reader.

9.7.5 **Clock Distribution**

Clock distribution on Chrysalis board

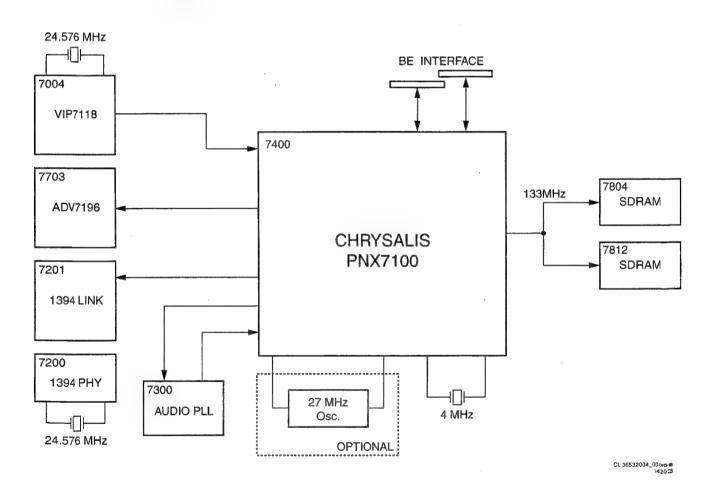

Figure 9-10

The PNX7100 has a complex clock system, which is needed to support the processes running at different frequencies such as video decoding, audio decoding or peripheral I/O devices etc. To ensure a synchronous initialisation of all the registers and state machines, all the PLLs are switched to their default frequency and the reset sequence is run at 4 MHz. Then when the booting control unit is correctly initialized and once it has captured all the booting parameters, it sets the PLLs to its functional frequency to allow the modules to run at their nominal frequencies. Thanks to a clock blocking mechanism, the frequency switching is glitch free.

System clocks:

- PNX7100 (IC7400, pins AF9 and AF10): 4 MHz provided by the xtal oscillator 7402.
- SAA7118 (IC7004, pins A3 and B4): 24.576 MHz provi ded by xtal 1001.
- ADV7196 (IC7703, pin 25): 27 MHz provided by PNX7 100.
- SDRAM (IC7804 and 7808, pin 38): 133 MHz provioed by the PNX7100.
- 1394-LINK (IC7201, pin 88): 49.152 MHz provided by 1394-PHY.
- 1394-PHY (IC7200, pins 59 and 60): 24.576 MHz provi ded by xtal 1201.

9.7.6 Power Supply

The Digital Board is not powered in standby mode. The control signal 'ION' (Inverse On), coming from the analogue board, will enable the PSU, and power the digital board.

- ION = High: the digital board is in powered down standby mode.
- ION = Low: the power supply to the digital board is enabled.

The 3V3, +5V, -5V, and +12V come from the PSU, while the 1V8 core voltage is generated on the board by a low voltage buck controller (item 7501). It provides the control for a DC-DC power solution producing an 1.8V output voltage over a wide current range. The NCP1570-based solution is powered from

12 V with the output derived from the 3V3 supply. It contains all required circuitry for a synchronous NFET (IC7500-1 and -2) buck regulator.

9.7.7 **Memory**

Several memories are used on the Chrysalis Digital Board:

- EEPROM IC7810: this memory contains all the necessary boot parameters of the board.
- EEPROM IC7809: this memory contains all the necessary parameters for the application.
- FLASH IC7807(05/11): this memory contains the application-, diagnosis-, and service software.

9.7.8 Reset

Reset concept Chrysalis board

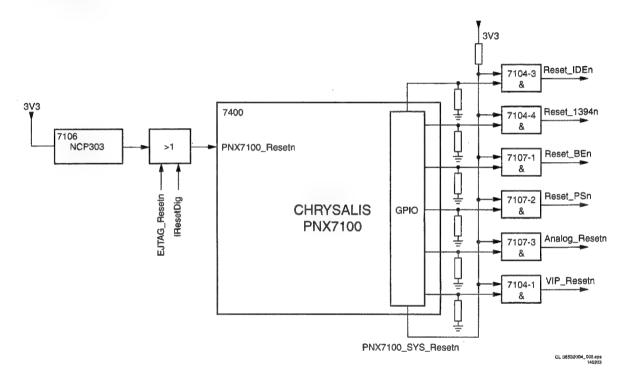

Figure 9-11

The voltage detector NCP303LSN29 (IC7600) provides the reset signal PNX7100_RESETn (active 'low') with the correct timing behavior. This circuitry functions as a Power-On Reset (POR) module, which detects the minimum functional voltage that is needed by the device. It also detects any voltage drop. When the power voltage is outside the nominal range, a reset signal is generated by the POR module and fed to the reset module which controls the individual reset of the different peripherals and processing units.

There are two control lines which can overrule this reset signal:

- IRESET_DIG (controlled by the microprocessor on the Analogue Board).
- EJTAG_RESETn (only for production).

They can pull the output of the NCP303LSN29 (item 7106) down via a shottky diode.

So when the output signal PNX7100_RESETn is 'low', the board will reset. When this signal is 'high', the board is up and running.

The PNX7100_SYS_RESETn is a general enabling signal for the different reset lines. All other reset lines are directly driven from Chrysalis port pins (e.g. MPIO13_IDE1_RESETn). All reset lines are logically connected via 74LVC08D (item 7104) and (item 7107) AND-gates. If both reset signals are low, all other external devices are initialised.

9.7.9 I2C Bus

The PNX7100 is the master of the I2C bus (during reset, external I2C masters are allowed). The following ICs are controlled by the I2C bus:

- IC7809.
- IC7810 NVRAMs.
- IC7004 VIP.
- IC7700 FLI2301 Video De-interlacer Line Doubler (for Chrysalis-F boards).
- IC7703 ADV7196 Video Enc (for progressive scan done by Chrysalis).

9.7.10 I/O Connectors

AIO Connector (item 1900)

The Audio In/Out (AIO) connector is used to interchange digital audio signals between Analog- and Digital Board.

DAIO Connector (item 1901)

The Digital Audio In/Out (DAIO) connector is used to interchange digital audio (SPDIF) signals between the IOE-Board and the Digital Board.

VIO Connector (item 1904)

The Video In/Out (VIO) connector is used to interchange analogue video signals between Analog- and Digital-Board.

9.7.11 Progressive Scan

Introduction

There are two versions foreseen, to generate a progressive scan analogue video output:

- In the standard Chrysalis board, the 'low end' progressive video output is generated by the PNX7100.
- In the Chrysalis 'F', the 'high end' progressive output is generated by the Faroudja FLI2301. This IC offers additionaly DCDi, upscaling to HDTV, and picture enhancement.

Description

The progressive scan part is integrated in the Digital Board and built around the FLI2301 de-interlace/line doubler (7701). This I2C controlled de-interlace uses a 64Mbit SDRAM (32bit x 2M) to perform high quality de-interlacing (meshing). The de-interlace gets its digital YUV input data from the PNX7100 (7400). The format of the digital YUV input to the Fli2301 is CCIR656 with separated Hsync, Vsync, and odd/even signal running on 27MHz.

9.8 Service UART Interface

Logic IC 74HCT14D (item 7111) is used to make a level conversion from microprocessor (LVTTL) to +/-5V (compatible with most RS232 interfaces) and vice versa. The control line MPIO19_CTL_SERVICE is used to activate service and diagnostic SW at start up procedure. The connectivity is provided via an external service tool.

9.9 EPG Nafta Board

9.9.1 General

Two ASICs from Gemstar, GS501 (item 7100) and GS502 (item 7201), generate the EPG OSD. The host P controls both ICs via the I2C bus (pins 45 and 48). A RAM memory (item 7102) and a Flash memory with the firmware (item 7101) belong also to the periphery of these ASICs.

A PIC processor (item 7303) generates the POR_N reset for this system. The POR_DC reset comes from the set, and is active after AC power 'on'. A port expander from the host, controls the EXT_RESET signal. This port expander (item 7200) is also used for switching the video paths on the EPG board.

Either the board works in 'Loop Trough' mode, or (for EPG) the output path is switched to the 'EPG RGB' video.

Blockdiagramm EPG-Modul Nafta

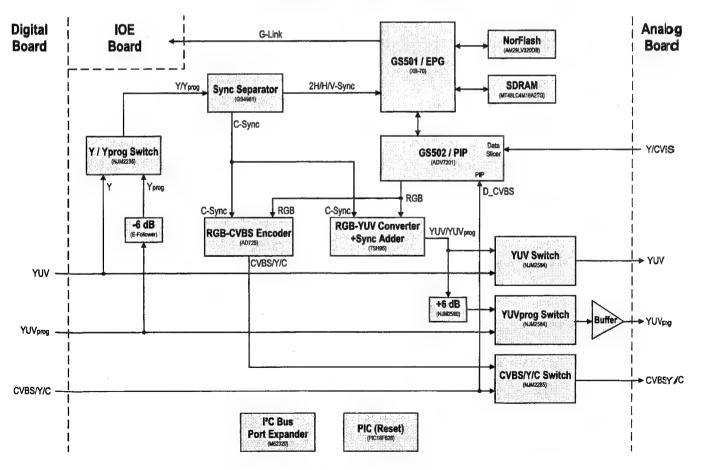

Figure 9-12

9.9.2 Loop trough

For 'Loop Trough' the input video signals (CVBS, YC, YUV, and YUV-progressive) from the Digital board are passing three video switches before going to the Analog board.

- Item 7503 for CVBS and Y/C.
- Item 7502 for YUV-interlaced.
- Item 7501 for YUV-progressive.

9.9.3 **EPG RGB Video**

A V-sync and H-sync (for progressive = 2H-sync) are necessary for outputting an RGB video. A sync separator (item 7703) generates these syncs. Input for the sync separator is either the 1fh or the 2fh luminance signal from the Digital board. A video switch (item 7700) makes the selection. For progressive video, the signal must be attenuated (item 7701).

The RGB signal goes via emitter followers (items 7202, 7203, and 7204) to an RGB-to-YUV converter and to an RGB-to-CVBS, Y/C converter.

The RGB-to-YUV converter consists of four OpAmp's, which are necessary for RGB/YUV conversion (item 7600-B, -C, and -D) and for adding the C-sync to the Y signal (item 7600-A). The RGB-to-CVBS, Y/C conversion is realized by IC7602. The oscillator (item 7601) is necessary for generating the chroma carrier.

With transistor 7603 the conversion stages can be switched 'off' for power saving.

For the PIP (Picture in Picture) feature, the D_CVBS video signal from the Digital board is used. This signal is fed to Pin 10 of IC7201. For scanning the EPG data, the A_YCVBS signal from the Analogue board is fed to pin 8 of IC7201.

9.9.4 Power supply

The supply for the video stages and the EPG digital part, are generated via DC-DC converters (items 7400, 7401, and 7403) out of the 12STBY.

9.10 EPG Europe Board

9.10.1 General

The ARM7 based microprocessor (item U1) and an ASIC (Gemstar GSA03, item U2) generates the EPG OSD data (RGB or YUV-interl./progr.). The host P on the Digital board, controls both ICs via the I2C bus. A RAM memory (item U7)

and two Flash memories (items U8 and U9) with the firmware and EPG data, belong also to the periphery of the ASIC. A resistor and capacitor (items R1 and C6) generate the reset for this system. The IPOR reset comes from the set and is active after main power 'on'. A port expander from the host, controls the nGCLR reset signal. This port expander (item U31) is also used for switching the video paths on the EPG board.

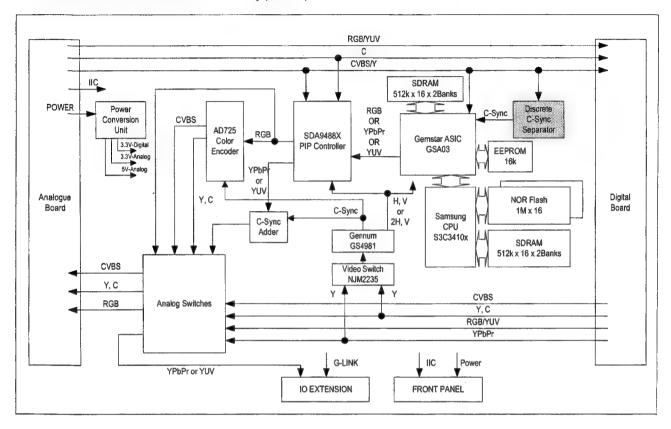

Figure 9-13

Either the board works in 'Loop Trough' mode, or (for EPG) the output path is switched to the 'EPG RGB' video.

9.10.2 Loop Trough

For 'Loop Trough', the input video signals (CVBS, YC, RGB, YUV-interlaced, and YUV-progressive) from the digital board are passing three video switches before going to the Analogue board.

- Item U15 for CVBS and Y/C selection between EPG and Loop trough.
- Items U16, U18, and U19 (and periphery) for RGB selection between EPG and Loop trough.
- Items U42 and U17 for YUV-interlaced and YUVprogressive selection between EPG and Loop trough. These signals are amplified (items U13B, C, and D) for driving a 75-Ohm output.

Note: RGB and YUV-interlaced (VR_DVD, UB_DVD, YG_DVD) are the same signals. It depends on the software, which signal is chosen.

9.10.3 EPG RGB

A V-sync and H-sync (for progressive = 2H-sync) are necessary for outputting an EPG video. A sync separator (item U10) generates these syncs. Input for the sync separator is either the 1fh or the 2fh luminance signal from the Digital board. A video switch (item U50) makes the selection.

The EPG signal goes via a PIP-inserter IC (item U11 and pheripherals) that inserts a PIP (Picture In Picture) into the EPG OSD. Source for this PIP is the CVBS signal from he digital board.

When the PIP output is a YUV signal, the Y signal is without a sync. Therefore, this sync must is added with item U13A.

For RGB-to-CVBS, Y/C conversion is realized by a PAL conversion IC (item U14). The oscillator (item Y5) is necessary for generating the chroma carrier.

For scanning EPG data, the A_YCVBS signal from the Analog board is used. This signal is fed to pin 189 of item U2. There is also a sync from the Analog board necessary. A discrete circuit (items Q18-Q23 and periphery) generates it.

9.10.4 Power supply

The supply for the video stages and the EPG digital partare generated via DC-DC converters and linear regulators (ierms U28, U40, and U41) out of the 12VSTBY.

9.11 I/O Extension Board

This board feeds the internal S/PDIF signal from the Digta. board to an optical and/or digital out connector. For European players, also an YUV output is present on this board.

PIN FUNCTION DESCRIPTIONS

Pin	Input/Output	Pin Name	Description
1	I	DGND	Digital Ground.
2	I	MCLK	Master Clock Input. Connect to an external clock source at either 256 F_s , 384 F_s , 512 F_s , 768 F_s , or 1024 F_s .
3	I	CLATCH	Latch Input for Control Data. This input is rising-edge sensitive.
4	I	CCLK	Control Clock Input for Control Data. Control input data must be valid on the rising edge of CCLK. CCLK may be continuous or gated.
5	I	CDATA	Serial Control Input, MSB first, containing 16 bits of unsigned data per channel. Used for specifying channel-specific attenuation and mute.
6		NC	No Connect.
7	I	192/48	Selects 48 kHz (LO) or 192 kHz Sample Frequency.
8	0	ZEROR	Right Channel Zero Flag Output. This pin goes HI when Right Channel has no signal input for more than 1024 LR Clock Cycles.
9	I	DEEMP	De-Emphasis. Digital de-emphasis is enabled when this input signal is HI. This is used to impose a 50 μs/15 μs response characteristic on the output audio spectrum at an assumed 44.1 kHz sample rate. Curves for 32 kHz and 48 kHz sample rates may be selected via SPI control register.
10	I	96/48	Selects 48 kHz (LO) or 96 kHz Sample Frequency.
11, 15	I	AGND	Analog Ground.
12	0	OUTR+	Right Channel Positive Line Level Analog Output.
13	0	OUTR-	Right Channel Negative Line Level Analog Output.
14	0	FILTR	Voltage Reference Filter Capacitor Connection. Bypass and decouple the voltage reference with parallel 10 µF and 0.1 µF capacitors to the AGND.
16	0	OUTL-	Left Channel Negative Line Level Analog Output.
17	0	OUTL+	Left Channel Positive Line Level Analog Output.
18	I	AVDD	Analog Power Supply. Connect to Analog 5 V Supply.
19		FILTB	Filter Capacitor Connection. Connect 10 µF capacitor to AGND (Pin 15).
20	I	IDPM1	Input Serial Data Port Mode Control One. With IDPM0, defines 1 of 4 serial modes.
21	I	IDPM0	Input Serial Data Port Mode Control Zero. With IDPM1, defines 1 of 4 serial modes.
22	0	ZEROL	Left Channel Zero Flag Output. This pin goes HI when Left Channel has no signal input for more than 1024 LR Clock Cycles.
23	I	MUTE	Mute. Assert HI to mute both stereo analog outputs. Deassert LO for normal operation.
24	I	RESET	Reset. The AD1852 is reset on the rising edge of this signal. The serial control port registers are reset to the default values. Connect HI for normal operation.
25	I	L/RCLK	Left/Right Clock Input for Input Data. Must run continuously.
26	I	BCLK	Bit Clock Input for Input Data. Need not run continuously; may be gated or used in a burst fashion.
27	I	SDATA	Serial Input, MSB first, containing two channels of 16, 18, 20, and 24 bits of twos complement data per channel.
28	I	DVDD	Digital Power Supply Connect to digital 5 V supply.

PINNING

SYMBOL	PIN	INPUT/OUTPUT ⁽¹⁾	I _{max} (mA)	DESCRIPTION
V _{SSP}	1	ground	-	pad ground
SDATA1	2	input	T -	I ² S-bus serial data input port 1 with internal pull-down resistor
SCLK1	3	input/output	4	I ² S-bus serial clock port 1 with internal pull-down resistor
SWS1	4	input/output	4	I ² S-bus word select port 1 with internal pull-down resistor
V _{DDP}	5	supply	-	pad ring supply voltage (3.3 V)
SDATA2	6	input/output	4	I ² S-bus serial data port 2 with internal pull-down resistor
SCLK2	7	input/output	4	I ² S-bus serial clock port 2 with internal pull-down resistor
SWS2	8	input/output	4	I ² S-bus word select port 2 with internal pull-down resistor
ACLK	9	output	4	audio clock output (256 \times f _s or 384 \times f _s)
V _{SSP}	10	ground	-	pad ground
IDQ	11	input	-	reserved (recommended connect to pin V _{SSP}) with internal pull-down resistor
YUV0	12	input	-	video input signal bit 0 (LSB)
YUV1	13	input	-	video input signal bit 1
YUV2	14	input	1 -	video input signal bit 2
YUV3	15	input	-	video input signal bit 3
YUV4	16	input	-	video input signal bit 4
YUV5	17	input	-	video input signal bit 5
YUV6	18	input	_	video input signal bit 6
YUV7	19	input	-	video input signal bit 7 (MSB)
V _{SSP}	20	ground	-	pad ground
HSYNC	21	input	-	horizontal sync input (video) with internal pull-down resistor
VSYNC	22	input	-	vertical sync input (video) with internal pull-down resistor
FID	23	input	-	video ?eld identi?cation input (odd/even ?eld) with internal pull-down resistor
VCLK1	24	input	-	video clock input 1 (27 MHz) with internal pull-down resistor
V _{SSCO}	25	ground	-	core ground
V _{SSCO}	26	ground	_	core ground
V _{DDCO}	27	supply	-	core supply voltage (2.5 V)
V _{DDCO}	28	supply	-	core supply voltage (2.5 V)
V _{DDP}	29	supply	-	pad ring supply voltage (3.3 V)
VCLK2	30	input	-	video clock input 2 (27 MHz) with internal pull-down resistor
PDOAV	31	3-state output	4	parallel stream data output for audio/video identi?er
PDIDS	32	input	_	parallel stream data input for data strobe (request for packet in Data Expansion Bus Interface (DEBI) slave mode) with internal pull-up resistor
PDOSYNC	33	3-state output	4	parallel stream data output for packet sync
V _{SSP}	34	ground	-	pad ground
PDOVAL	35	3-state output	4	parallel stream data valid output with internal pull-up resistor
PDO0	36	3-state output	4	parallel stream data output bit 0 (LSB)

2001 Aug 01

SYMBOL	PIN	INPUT/OUTPUT ⁽¹⁾	I _{max} (mA)	DESCRIPTION
PDO1	37	3-state output	4	parallel stream data output bit 1
PDO2	38	3-state output	4	parallel stream data output bit 2
V_{DDP}	39	supply		pad ring supply voltage (3.3 V)
PDO3	40	3-state output	4	parallel stream data output bit 3
PDO4	41	3-state output	4	parallel stream data output bit 4
PDO5	42	3-state output	4	parallel stream data output bit 5
PDO6	43	3-state output	4	parallel stream data output bit 6
V _{SSP}	44	ground	-	pad ground
PDO7	45	3-state output	4	parallel stream data output bit 7 (MSB)
PDIOCLK	46	input/output	4	parallel stream clock input/output
I2CADDRSEL	47	input	-	I ² C-bus address select input with internal pull-up resistor
SD_DQ15	48	input/output	8	SDRAM data input/output bit 15 (MSB)
V _{DDP}	49	supply	-	pad ring supply voltage (3.3 V)
SD_DQ0	50	input/output	8	SDRAM data input/output bit 0 (LSB)
SD_DQ14	51	input/output	8	SDRAM data input/output bit 14
SD_DQ1	52	input/output	8	SDRAM data input/output bit 1
V _{SSP}	53	ground	T -	pad ground
SD_DQ13	54	input/output	8	SDRAM data input/output bit 13
SD_DQ2	55	input/output	8	SDRAM data input/output bit 2
SD_DQ12	56	input/output	8	SDRAM data input/output bit 12
V _{DDP}	57	supply	-	pad ring supply voltage (3.3 V)
SD_DQ3	58	input/output	8	SDRAM data input/output bit 3
SD_DQ11	59	input/output	8	SDRAM data input/output bit 11
SD_DQ4	60	input/output	8	SDRAM data input/output bit 4
SD_DQ10	61	input/output	8	SDRAM data input/output bit 10
V _{SSP}	62	ground	-	pad ground
SD_DQ5	63	input/output	8	SDRAM data input/output bit 5
SD_DQ9	64	input/output	8	SDRAM data input/output bit 9
SD_DQ6	65	input/output	8	SDRAM data input/output bit 6
SD_DQ8	66	input/output	8	SDRAM data input/output bit 8
V _{DDP}	67	supply	-	pad ring supply voltage (3.3 V)
SD_DQ7	68	input/output	8	SDRAM data input/output bit 7
SD_DQM1	69	output	8	SDRAM data mask enable output bit 1
SD_DQM0	70	output	8	SDRAM data mask enable output bit 0 (LSB)
SD_WE	71	output	8	SDRAM write enable output (active LOW)
V _{SSP}	72	ground	-	pad ground
SD_CAS	73	output	8	SDRAM column address strobe output (active LOW)
SD_CLK	74	output	8	SDRAM clock output
SD_RAS	75	output	8	SDRAM row address strobe output (active LOW)
SD_CKE	76	output	8	SDRAM clock enable output

SAA6752HS

SYMBOL	PIN	INPUT/OUTPUT ⁽¹⁾	I _{max} (mA)	DESCRIPTION
V _{SSCO}	77	ground	_	core ground
V _{SSCO}	78	ground	-	core and substrate ground
V _{DDCO}	79	supply	_	core supply voltage (2.5 V)
V _{DDCO}	80	supply	_	core supply voltage (2.5 V)
V _{DDP}	81	supply	-	pad ring supply voltage (3.3 V)
SD_CS	82	output	8	SDRAM chip select output (active LOW)

SD_DQ23	122	input/output	8	reserved (do not connect)
EXTCLK	123	input	-	27 MHz external clock input with internal pull-up resistor
V _{SSP}	124	ground	-	pad ground
V _{SSA}	125	ground	-	oscillator analog ground
XTALI	126	analog input	-	crystal oscillator input (27 MHz); note 2
XTALO	127	analog output	T-	crystal oscillator output (27 MHz)
V _{DDA}	128	supply	-	oscillator analog supply voltage (2.5 V)
V _{SSCO}	129	ground	-	core ground
V _{SSCO}	130	ground	-	core ground
V _{DDCO}	131	supply	<u> </u>	core supply voltage (2.5 V)
V _{DDCO}	132	supply	-	core supply voltage (2.5 V)
V _{DDP}	133	supply	-	pad ring supply voltage (3.3 V)
TDI	134	input	-	boundary scan test data input; pin must ?oat or set to HIGH during normal operating; with internal pull-up resistor; note 3
TMS	135	input	-	boundary scan test mode select; pin must ?oat or set to HIGH during normal operating; with internal pull-up resistor; note 3
TCK	136	input	-	boundary scan test clock; pin must be set to LOW during normal operating; with internal pull-up resistor; note 3
TDO	137	3-state output	4	boundary scan test data output; pin not active during normal operating; with 3-state output; note 3
V _{SSP}	138	ground	-	pad ground
TRST	139	input	-	test reset input (active LOW), for boundary scan test (with internal pull-up); notes 3 and 4
CLKOUT	140	output	4	27 MHz system clock output
TEST0	141	input/output	4	reserved (do not connect)
TEST1	142	input/output	4	reserved (do not connect)
V _{DDP}	143	supply	-	pad ring supply voltage (3.3 V)
TEST2	144	input/output	4	reserved (do not connect)
SDA	145	input/open-drain output	-	serial data input/output (I ² C-bus)
SCL	146	input/open-drain output	-	serial clock input/output (I ² C-bus)
RESET	147	input	 	reset input (active LOW); with internal pull-up resistor
V _{SSP}	148	ground	1 -	pad ground
RTS	149	output	4	reserved (do not connect); Universal Asynchronous Receiver/Transmitter (UART) request to send output (active LOW)

SYMBOL	PIN	INPUT/OUTPUT ⁽¹⁾	I _{max} (mA)	DESCRIPTION
CTS	150	input	-	reserved (recommended connect to pin V_{DDP}); UART clear to send input; external static memory select input (active LOW); with internal pull-up resistor
RXD	151	input	-	reserved (recommended connect to pin V _{DDP}); UART receive data; internal boot select input; with internal pull-up resistor
TXD	152	output	4	reserved (do not connect); UART transmit data
V _{DDP}	153	supply	-	pad ring supply voltage (3.3 V)
SM_LB	154	input/output	4	reserved (do not connect)
SM_UB	155	input/output	4	reserved (do not connect)
H_IRF	156	3-state output	4	host interrupt ?ag output; with internal pull-up resistor
V _{SSP}	157	ground	-	pad ground
SM_OĒ	158	output	4	reserved (do not connect), static memory output enable output (active LOW)
SM_A9	159	output	4	reserved (do not connect), static memory address output bit 9
SM_A10	160	output	4	reserved (do not connect), static memory address output bit 10
V_{DDP}	161	supply	_	pad ring supply voltage (3.3 V)
SM_A8	162	output	4	reserved (do not connect), static memory address output bit 8
SM_A11	163	output	4	reserved (do not connect), static memory address output bit 1 1
SM_A7	164	output	4	reserved (do not connect), static memory address output bit 7
SM_A12	165	output	4	reserved (do not connect), static memory address output bit 12
V _{SSP}	166	ground	-	pad ground
SM_A6	167	output	4	reserved (do not connect), static memory address output bit 6
SM_A13	168	output	4	reserved (do not connect), static memory address output bit 1 3
SM_A5	169	output	4	reserved (do not connect), static memory address output bit 5
SM_A14	170	output	4	reserved (do not connect), static memory address output bit 1 4
V _{DDP}	171	supply	1 -	pad ring supply voltage (3.3 V)
SM_WE	172	output	4	reserved (do not connect), static memory write enable output (active LOW)
SM_D7	173	input/output	4	reserved (do not connect), static memory data input/output bit 7 with internal pull-down resistor
SM_D8	174	input/output	4	reserved (do not connect), static memory data input/output bit 8 with internal pull-down resistor
SM_D6	175	input/output	4	reserved (do not connect), static memory data input/output bit 6 with internal pull-down resistor
V _{SSP}	176	ground	_	pad ground
SM_D9	177	input/output	4	reserved (do not connect), static memory data input/output bit 9 with internal pull-down resistor
SM_D5	178	input/output	4	reserved (do not connect), static memory data input/output bit 5 with internal pull-down resistor
SM_D10	179	input/output	4	reserved (do not connect), static memory data input/output bit 10 with internal pull-down resistor

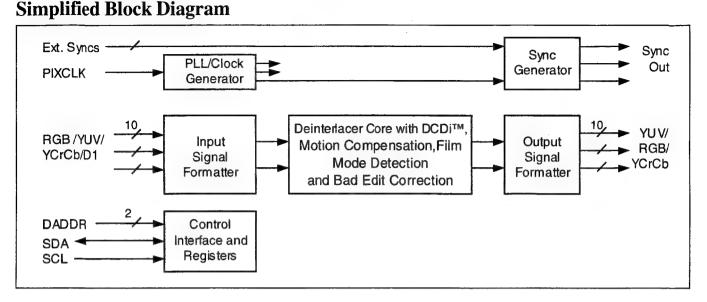

SAA6752HS

SYMBOL	PIN	INPUT/OUTPUT ⁽¹⁾	I _{max} (mA)	DESCRIPTION
SM_D4	180	input/output	4	reserved (do not connect), static memory data input/output bit 4 with internal pull-down resistor
V _{SSCO}	181	ground	_	internal pre-driver and substrate ground
V _{SSCO}	182	ground		core ground
V _{DDCO}	183	supply	. –	core supply voltage (2.5 V)
V _{DDCO}	184	supply	-	internal pre-driver supply voltage (2.5 V)
V _{DDP}	185	supply	_	pad ring supply voltage (3.3 V)
SM_D11	186	input/output	4	reserved (do not connect), static memory data input/output bit 11 with internal pull-down resistor
SM_D3	187	input/output	4	reserved (do not connect), static memory data input/output bit 3 with internal pull-down resistor
SM_D12	188	input/output	4	reserved (do not connect), static memory data input/output bit 12 with internal pull-down resistor
SM_D2	189	input/output	4	reserved (do not connect), static memory data input/output bit 2 with internal pull-down resistor
V _{SSP}	190	ground	T-	pad ground
SM_D13	191	input/output	4	reserved (do not connect), static memory data input/output bit 13 with internal pull-down resistor
SM_D1	192	input/output	4	reserved (do not connect), static memory data input/output bit 1 with internal pull-down resistor
SM_D14	193	input/output	4	reserved (do not connect), static memory data input/output bit 14 with internal pull-down resistor
SM_D0	194	input/output	4	reserved (do not connect), static memory data input/output bit 0 (LSB) with internal pull-down resistor
V _{DDP}	195	supply	_	pad ring supply voltage (3.3 V)
SM_D15	196	input/output	4	reserved (do not connect), static memory data input/output bit 15 (MSB) with internal pull-down resistor
SM_CS3	197	output	4	reserved (do not connect), static memory chip select output for external ROM or RAM (active LOW)
SM_A4	198	output	4	reserved (do not connect), static memory address output bit 4
SM_A3	199	output	4	reserved (do not connect), static memory address output bit 3
V _{SSP}	200	ground	_	pad ground
SM_A2	201	output	4	reserved (do not connect), static memory address output bit 2
SM_A15	202	output	4	reserved (do not connect), static memory address output bit 15
SM_A1	203	output	4	reserved (do not connect), static memory address output bit 1
SM_A16	204	output	4	reserved (do not connect), static memory address output bit 16
V _{DDP}	205	supply	-	pad ring supply voltage (3.3 V)
SM_A0	206	output	4	reserved (do not connect), static memory address output bit O (LSB)
SM_A17	207	output	4	reserved (do not connect), static memory address output bit 17 (MSB)
SM_CS0	208	output	4	reserved (do not connect)

IC7700: FLI2200, Digital Board 1.5, Deinterlacer

.........

Pin description

Pin#	Name	Description
	.0	continue to the second
52	NOMEM	No Memory Mode control input. This pin controls the operation of the FLI2200 as follows: When this pin is set low the device is used with external field memories and operates in the full set of deinterlacing modes, i.e., motion adaptive video deinterlacing and full frame film source deinterlacing using 3:2 pulldown detection (2:2 pulldown for 625/50 sources). When this pin is set high the FLI2200 is forced into the intra-field only deinterlacing mode, which requires no external memories, allowing the FLI2200 to be used in low-cost applications where the ultimate video quality is not a requirement. <i>To ensure proper startup of the SDRAMs this pin should be set high during the power-up sequence</i> . This can be overridden by the NMOvr bit, bit 1 in register 05 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 05 _H for details.
	Production of	The second secon
27-18	G/YIN ₉₋₀	10-bit green or luminance signal input bus. The mode is set by the IFORMAT $_{2-0}$ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00_H , allowing this function to be set or changed via the I 2 C bus. Please refer to the description of register 00_H for details. This signal is sampled on the rising edge of PIXCLK.
15-6	B/CbIN ₉₋₀	10-bit blue or Cb chroma signal input bus. The mode is set by the IFORMAT ₂₋₀ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 00 _H for details. Bits 6, 4 and 3 in register 08 _H specify the busses used in the multiplexed modes. In all cases the signals are sampled on the rising edges of PIXCLK. In the Y Cb Cr and Y Pb Pr modes the Cb or Pb signal is sampled on alternate rising edges of PIXCLK in 4:2:2 mode. The frequency of PIXCLK will be 27 MHz in the multiplexed Y/Cb/Cr mode and 13.5 MHz in all other modes. These pins should be tied low when not used.
39-35 32-28	R/CrIN ₉₋₀	10-bit red or Cr chroma signal input bus. The mode is set by the IFORMAT ₂₋₀ pins. This can be overridden by the IFmtOvr bit, bit 3 in register 00 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 00 _H for details. Bits 6, 4 and 3 in register 08 _H specify the busses used in the multiplexed modes. In all cases the signals are sampled on the rising edges of PIXCLK. In the Y Cb Cr mode the Cr signal is sampled on alternate rising edges of PIXCLK in 4:2:2 mode. The frequency of PIXCLK will be 27 MHz in the multiplexed Y/Cb/Cr mode and 13.5 MHz in all other modes. These pins should be tied low when not used.
3	HSYNCREFI	Horizontal sync or reference. The horizontal sync or reference of the input signal should be connected to this pin. The function is programmed with bit 4 in register 00_H . The polarity and position of the sync or reference pulse relative to the start of active video are both programmable within a small range. When the FLI2200 is used in the ITU-R BT 601/D1 input mode with embedded syncs (IFormat = 110) this input is not used and should be tied low; in this case all sync information will be derived from the signal.
4	VSYNCREFI	Vertical sync or reference. The vertical sync or reference of the input signal should be connected to this pin. The function is programmed with bit 4 in register 00_H . The polarity and position of the sync or reference pulse relative to the start of active video are both programmable within a small range. When the FLI2200 is used in the ITU-R BT 601/D1 input mode with embedded syncs (IFormat = 110) this input is not used and should be tied low; in this case all sync information will be derived from the signal.
5	FLDIN	Field identifier input. The field identifier output of the source signal should be connected to this pin. A low setting signifies an even field and a high level signifies an odd field. When bit 4 in register 00_H is set low, the input timing is based on HREF and VREF and this signal is required. When this bit is set high the input timing is based on HSYNC and VSYNC and this signal is generated internally and is not required. When bit 5 in register 06 is set high this signal is also used as the frame boundary identifier for 30 Hz film sources.

Pin Connections and Functions

Pin#	Name	Description						
r FE	5	THE TRUTTERS OF THE PROPERTY AND A TOTAL BOOK OF THE PROPERTY						
See list	V _{SS}	Ground connections. Connect to the digital ground plane. Pins: 2, 17, 34, 55, 64, 74, 85, 96, 106, 115, 124, 132, 138, 145, 152, 159, 168						
See list	V_{DD33}	Pad Ring digital power connections. Connect to the digital 3.3 volt power supply and decouple to the digital ground plane. Pins: 1, 33, 63, 73, 84, 95, 105, 114, 123, 137, 144, 151, 167						
See list	V _{DD25}	Core Logic digital power connections. Connect to the digital 2.5 volt power supply and decouple to the digital ground plane. Pins: 16, 54, 107, 158						
43	AV _{SS}	Ground connection for the clock PLL circuits. Connect to the digital ground plane						
42	AV _{DD}	Analog power connections for the clock PLL circuit. Connect to a separately decoupled 2.5 volt power supply and decouple directly to the ${\rm AV}_{\rm SS}$ pin						
49	RESETB	Reset. When this input is set low it will reset all the internal registers to the default states. Refer to the section on the control registers for details of these states. The device must be reset after it is powered-up.						
53	OE	When this pin is set high the outputs of the FLI2200 will be enabled; when it is set low the outputs will be set into a high-impedance state.						
56-58	IFORMAT ₂₋₀	Input signal format control. The settings of these pins set the format of the input signal. This can be overridden by the IFmtOvr bit, bit 3 in register 00 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 00 _H for details.						
59-61	OFORMAT ₂₋₀	Output signal format control. The settings of these pins set the format of the output signal. This can be overridden by the OFmtOvr bit, bit 3 in register 07_H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 07_H for details.						
44-45	DADDR ₁₋₀	The settings of DADDR ₁₋₀ allow the device address of the control bus to be programmed to prevent conflict with the other devices connected to the bus. DADDR ₁₋₀ allow the device address to be set to any of the following values: C0/C1 _H , C2/C3 _H , E0/E1 _H , E2/E3 _H . Please refer to the section "Control Bus Operation and Protocol" for further information.						
46	MODE	When this pin is set low the control bus will operate in the slave mode; allowing the device to programmed from an external controller. When it is set high the FLI2200 will self-program from an external I ² C memory connected to the bus. Please refer to the "Control Bus Operation and Control Protocol" section for more details.						
47	SDA	2-wire serial control bus data. Data can be written to the control registers via this pin when it is in the input mode and data can be read from the status registers when it is in the output mode. Refer to the section on the serial port for timing and format details and to the section on the registers for programming information.						
48	SCL	2-wire serial control bus clock. When the control port operates in slave mode this pin will be an input and when it operates in the self programming mode it will be an output.						
40	PIXCLK	Pixel clock input. This clock is used to drive all the circuits in the FLI2200. An internal PLL is used to upconvert this clock to provide the master clock signal and other clocks used internally. Note that when the FLI2200 is used in the D1 input mode the PIXCLK input should run at the rate of two cycles per pixel (one for luma and one for chroma).						
62	N/P/IN/OUT	NTSC/PAL input or output. The default function of this pin is NTSC/PAL signal indicator output. When the input video signal is a 525 line signal this pin will be set high and when it is a 625 line signal the pin is set low. This function of this pin can be programmed to be an input according to the setting of this pin if the NPOp ₁₋₀ bits, bits 5-4 in register 03_H , are set to 00_H , overriding the internal line counter. i.e., it will treat the signal as a 525 line signal when it is set high and a 625 line signal when it is set low.						

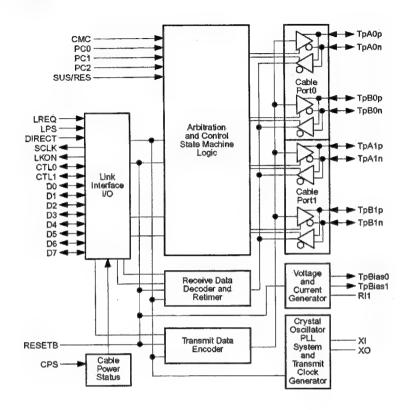

Pin #	Name	Description
	1 Ph. F . T	
65-72 75-76	G/YOUT ₉₀	Green or luminance output bus. In the RGB mode this output is the Green signal and in the YCbCr mode it is the Y signal. The mode is set by the OFORMAT ₂₋₀ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 07 _H for details. The signal is clocked out on the falling edge of YCLKO.
93-94 97-104	B/CbOUT ₉₋₀	Blue or Cb chrominance output bus. In the RGB mode this output is the Blue signal, in the Y Cb Cr mode it is the Cb signal. The mode is set by the OFORMAT ₂₋₀ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07 _H , allowing this function to be set or changed via the I²C bus. Please refer to the description of register 07 _H for details. The busses used in the multiplexed modes are set by means of bit 5 in register 08 _H . The signal is clocked out on the falling edge of YCLKO in the RGB and YUV 4:4:4 modes, on the falling edge of YCLKO prior to the next rising edge of CCLKO in the YUV 4:2:2 mode, and on the rising edge of MEMCLKO in the multiplexed YCbCr (pseudo D1) mode.
77-83 86-88	R/CrOUT ₉₋₀	Red or Cr chrominance output bus. In the RGB mode this output is the Red signal, in the YCbCr mode it is the Cr signal. The mode is set by the OFORMAT ₂₋₀ pins. This can be overridden by the OFmtOvr bit, bit 3 in register 07 _H , allowing this function to be set or changed via the I ² C bus. Please refer to the description of register 07 _H for details. The busses used in the multiplexed modes are set by means of bit 5 in register 08 _H . The signal is clocked out on the falling edge of YCLKO in the RGB and YUV 4:4:4 modes, on the falling edge of YCLKO prior to the next rising edge of CCLKO in the YUV 4:2:2 mode, and on the rising edge of MEMCLKO in the multiplexed YCbCr (pseudo D1) mode.
116	CCLKO	Chroma output sampling clock. This clock is derived from PIXCLK and will be at half the frequency of YCLKO. In 30-bit 4:2:2 output mode the chroma output signals will change on the falling edge of YCLKO prior to the next rising edge this clock.
117	YCLKO	Luma output sampling clock. This clock is derived from PIXCLK and is double the frequency of PIXCLK. In 30-bit and 20-bit output modes the output signals will change on the falling edge of this clock.
89	VREFO	Start of active field or frame indicator. This signal goes high to indicate the first active line in each field or frame and goes low during the vertical blanking interval. The polarity and timing of this signal are programmable.
90	HREFO	Start of active line indicator output. This signal goes high to indicate the first active pixel in each line and goes low during the horizontal blanking interval. The polarity and timing of this signal are programmable.
91	VSYNC/ CREFO	Vertical sync output. This signal provides the vertical sync function for the outputs. Its polarity is programmable to be active high or active low. It can also be programmed to be a composite reference for applications requiring this instead of sync.
92	H/CSYNCO	Horizontal or composite sync output. This signal provides the horizontal sync function for the outputs. Its polarity is programmable to be active high or active low. This signal can also be programmed to be the composite sync output, CSYNC.
108	FSYNC	Film mode sync output. When film mode is detected this pin will toggle in sync with the 3:2 (NTSC) or 2:2 (PAL and 30 Hz film in NTSC) pulldown sequence detected in the source.
110	FILM	Film mode detector output. This pin will be set high when the FLI2200 detects that the video input was converted from 24 fps film with a teleciné machine. If film mode is not detected this pin will be set low.

Pin #	Name	Description
C-7		
125-131 133-136	ADDR ₁₀₋₀	SDRAM Address bus. This signal bus is used to address the external SDRAM(s) used for field memories. It should be connected to the A_{10-0} bus of the memory chip(s). Please refer to the Applications section of this data sheet for further details.
176-169 166-160 157-153 150-146 143-139	DATA ₂₉₋₀	SDRAM Data bus. This signal bus is used to transfer the data to and from the external SDRAM(s) used for field memories. It should be connected to the DQ ₂₉₋₀ bus of the memory chip when using a 64 Mbit SDRAM. When using two 16 Mbit SDRAMs this 30-bit bus may be connected to the two 16-bit data busses of the memories in two ways: either connect 16 lines to one chip and 14 to the other, or connect 15 to both. In all cases the two unused data lines on the memory chip(s) should be connected to ground via 22 k? resistors. Please refer to the Applications section of this data sheet for further details.
118	MEMCLKO	SDRAM clock and 2x output sampling clock. This clock is derived from PIXCLK and will be at double the frequency of YCLKO. This active signal should be connected to the CLK pin(s) on the SDRAM(s). When the 10-bit output mode selected the output signals will also change at this clock rate and this should then be used as the output clock.
119	WEN	SDRAM Write Enable. This active low signal should be connected to the WE pin(s) on the SDRAM(s).
120	RASN	SDRAM Row Address Select. This active low signal should be connected to the RAS pin(s) on the SDRAM(s).
121	CASN	SDRAM Column Address Select. This active low signal should be connected to the CAS pin(s) on the SDRAM(s).
122	BSEL	SDRAM Bank Select. When using two 16 Mbit SDRAMs this signal should be connected to the BA (also called BS or A ₁₁) pin on both SDRAMs. When using a 64 Mbit SDRAM this signal should be connected to the BA0 (also called BS0 or A ₁₁) pin on the SDRAM and BA1/BS1 (also called BA when BA0 is referred to as A ₁₁) should be tied low.
17:00:50		
41, 50, 51, 109, 111	TEST ₄₋₀	These pins are used for test purposes only and should always be tied low for normal operation
000	A see and a	and the state of t
112, 113	TESTO ₁₋₀	These pins are test outputs and should be left unconnected in normal operation.

CPS	32		Cable power status Connect to the cable through a 390 k Ω resistor and to GND through a 100 k Ω resistor: 0: Cable power fail 1: Cable power on				

1.2 Link Interface Pins

Name	Pin No:	1/0	Function			
D0	8	1/0	Data input/output (bit 0)			
D1	9	1/0	Data input/output (bit 1)			
D2	11	1/0	Data input/output (bit 2)			
D3	12	VO	Data input/output (bit 3)			
D4	14	1/0	Data input/output (bit 4)			
D5	15	1/0	Data input/output (bit 5)			
D6	17	1/0	Data input/output (bit 6)			
D7	18	1/0	Data input/output (bit 7)			
CTL0	5	1/0	Link interface control (bit 0)			
CTL1	6	1/0	Link interface control (bit 1).			
LREQ	63	J	Link request input			
SCLK	2	0	Link control output clock			
			LPS 1: 49.152 MHz output			
			LPS 0: Clamp to 0 (The clock signal will be output within 25 µsec after change to "0")			
LPS	59	1	Link power status input			
			0: Link power off			
			1: Link power on (PHY/Link direct connection)			
LKON	58	0	Link-on signal output			
	·		Link-on signal is 6.144 MHz clock output.			
			Please refer to 4.2 Link-on Indication.			
DIRECT	50	Ì	PHY/Link isolation barrier control input			
			0: Isolation barrier			
			1: PHY/Link direct connection			

1.3 Control Pins

Name	Pin No.	1/0	Function				
PC0	26	1	Power class set input				
PC1	27	ı	This pin status will be loaded to Pwr_class bit which allocated to PHY register 4H.				
PC2	28	1	IEEE1394a-2000 chapter [4.3.4.1]				
CMC	30	l	Configuration manager capable setting This pin status will be loaded to Contender bit which allocated to PHY register 4H. 0: Non contender 1: Contender				
RESETB	55	l	Power-on reset input Connect to GND through a 0.1 μ F capacitor. 0: Reset 1: Normal				
SPD	61	١	Speed select 0: MAX. S200 1: MAX. S400				

1.4 IC

Name	Pin No.	1/0	Function
IC(AL)	29; 51	-	Internally Connected (Low Clamped)
			Connect to GND.
IC(DL)	3		Internally Connected (Low Clamped)
}	1		Connect to GND:

1.5 Power Supply Pins

Name	Pin No.	1/0	Function
AV _{DD}	25, 31, 40, 47, 54	-	Analog power
AGND	24, 33, 35, 42, 49, 52, 53		Analog GND
DVoo	4, 10, 20, 56, 60	-	Digital Vcc
DGND	1, 7, 13, 16, 21, 57, 64	-	Digital GND

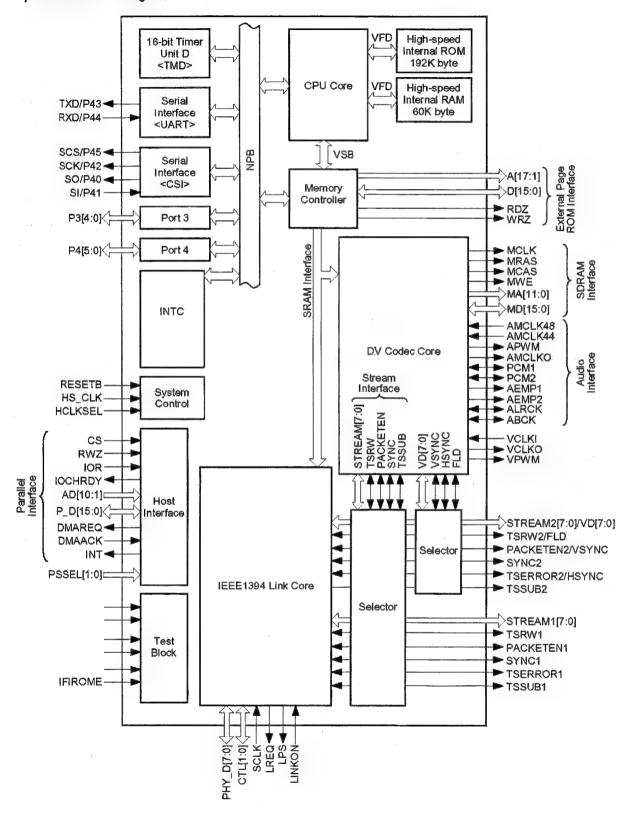

1.6 Other Pins

Name	Pin No.	1/0	Function	
TpBias0	41	0	Port 0 twisted pair output	
TpBias1	48	0	Port 1 twisted pair output	
RI1	34	-	Resistor connection pin1 for reference current generator Connect to GND through a 9.1 k Ω resistor.	
XI	23	-	Crystal oscillator connection XI	
хо	22	-	Crystal oscillator connection XO	
TEST	62	-	Test pin Internally connected (Low clamped). Connect to GND.

1. PIN FUNCTIONS

(1) Link-related pins

Pin Name	Pin No.	1/0	Function	Active	After	Alternate
					Reset	Function
LINKON	18	'	Link-on signal input.	-	ı	-
			Clock input.			
			Inputs 0 if LPS is active.			
LPS	17	0	Link power status output	-	0	-
			Link power OFF : 0			,
			Link power ON : 2.7 MHz pulse output (54 MHz host	1		
			clock divided by 20)			
LREQ	16	0	Link request output		0	
SCLK	15	1	Clock input for Link control	-	1	-
			When LPS is active : 49.152 MHz input			
		_	LPS = 0 : Fixed to 0	ļ		
CTL[1:0]	12, 13	1/0	PHY/Link control signal I/O	-	l l	-
PHY_D[7:0]	2 to 4,	1/0	Data I/O between PHY and Link	-	'	-
	6 to 8,					
	10, 11		Note .	 	 	
STREAM1[7:0]	26 to 19	1/0	ISO data bus of stream interface 1 Note	-	-	
PACKETEN1	27	1/0	Packet enable signal I/O to/from stream interface 1 Note	H/L		-
TSERROR1	28	1/0	Packet error signal I/O to/from stream interface 1 Note	H/L		
TSRW1	29	1/0	Data read/write enable signal I/O to/from stream interface 1 Note	_	1	_
SYNC1	30	1/0	Frame sync signal I/O to/from stream interface 1 Note	H/L	1	_
TSSUB1	32	1/0	I :Inputs the packet gap signal when the stream is input	H/L	1	-
			through the stream interface		ļ	
			O :Not used. Connect this pin to Vop or GND via a resistor.			
STREAM2[7:0]	47 to 40	1/0	ISO data bus of stream interface 2 Note		ı	VD[7:0]
PACKETEN2	33	1/0	Packet enable signal I/O to/from stream interface 2 Note	H/L	1	VSYNC
TSERROR2	34	1/0	Packet error signal I/O to/from stream interface 2 Note	H/L	1	HSYNC.
TSRW2	36	.1/0	Data read/write enable signal I/O to/from stream interface 2 Note	-	i	FLD
SYNC2	37	1/0	Frame sync signal I/O to/from stream interface 2. Note	H/L	1	-
TSSUB2	38	0	Not used. Leave open.	_	0	_

Note When this signal is switched for transmission or reception to/from IEEE1394, it must be controlled that output does not conflict.

To prevent a floating state, connect a pull-up or pull-down resistor to this pin.

(2) Video interface pins

Pin Name	Pin No.	1/0	Function	Active	After	Alternate
					Reset	Function
VCLKI	50	1	Video clock input (27 MHz)	_	_	_
VCLKO	51	0	Video clock output (27 MHz)	_	-	-
VD[7:0]	47 to 40	1/0	Video data signal	-	-	STREAM2[7:0]
VSYNC	33	1/0	Vertical sync video signal Note	L	-	PACKETEN2
HSYNC	34	1/0	Horizontal sync video signal Note	Ŀ	_	TSERROR2
FLD	36	1/0	Field index signal Note	1	-	TSRW2
VPWM	53	0	PWM signal for video PLL	_	-	-

Note When this signal is switched for transmission or reception to/from IEEE1394, it must be controlled that output does not conflict.

(3) Audio interface pins

Pin Name	Pin No.	1/0	Function	Active	After	Alternate
					Reset	Function
AMCLK48	104	ı	Audio master clock input (for 48 kHz sampling frequency)	_	1	-
AMCLK44	103	1	Audio master clock input (for 44.1 kHz sampling	-	-	-
			frequency)			
AMCLKO	101	0	Audio master clock output	_	_	-
PCM1	96	1/0	Audio PCM serial data Note	-	-	_
		İ	With 2 channels: CH1			
			With 4 channels: CH1 or CH1 and CH2 mixed			
PCM2	97	1/0	Audio PCM serial data Note	-	-	_
			With 2 channels: Mute	l		
			With 4 channels: CH2			
AEMP1	98	0	PCM1 emphasis ON/OFF for PCM1 output	H.		-
AEMP2	100	0	PCM2 emphasis ON/OFF for PCM2 output	н	_	_
ALRCK	93	1/0	Audio LR clock Note:	-	-	-
			L-ch: High			
		<u> </u>	R-ch: Low			
ABCK	94	1/0	Audio bit clock Note		_	_
AFS[1:2]	48, 49	0	Audio sampling frequency	-	-	-
			AFS2 AFS1			
			44.1 kHz 0 1			
			48 kHz 0 0			
			32 kHz 1 0			
APWM	102	0	PWM signal for audio PLL	_		_

Note The input changes according to the switching of the encode/decode mode. It must be controlled so that the output does not conflict when the mode is switched.

To prevent a floating state, connect a pull-up or pull-down resistor to this pin.

(4) SDRAM interface pins

Pin Name	Pin No.	1/0	Function	Active	After	Alternate
					Reset	Function
MCLK	77	0	CLK pin connection for SDRAM.	-	_	-
MRAS	76	0	RAS pin connection for SDRAM	-		_
MCAS	75	0	CAS pin connection for SDRAM	_	1	1
MWE	74	0	WE pin connection for SDRAM	_	-	-
MA[11:0]	92,	0	Address pin connection for SDRAM	-	-	-
	90 to 83.					
	81 to 79					
MD[15:0]	73 to 69,	1/0	Data pin connection for SDRAM	-	-	-
	66 to 64.		These pins must be pulled up or down and then must be			
	62 to 57,		directly connected to the SDRAM pins.	1		
	55, 54					

(5) Host interface pins

Pin Name	Pin No.	1/0	Function	Active	After Reset	Alternate Function
CS	117	1	Parallel interface chip select input	L	1	-
RWZ	119 .	I	Parallel interface read/write control input ISA bus, SH-1 bus : Write strobe 68000 bus : Read/write select signal	. L .	l	ſ
IOR	120	1	Parallel interface IO read control input ISA bus, SH-1 bus : Read strobe 68000 bus : Data strobe (DS)	L	1	
IOCHRDY	123	0	Parallel interface ready output	L	0	1
AD[10:1]	116 to 107	1	Parallel interface address input	_	ĺ	-
P_D[15:0]	143 to 141, 139 to 132, 130 to 128, 126, 125	1/0	Parallel interface data input/output	-	1	-
DMAREQ	122	0	DMA request output	L	0	SIO_CNTO
DMAACK	121	1	DMA acknowledge input for parallel interface	L	1	SIO_CNTI

(b) Serial interface pins

Pin Name	Pin No.	NO	Function	Active	After Reset	Alternate Function
SO	145	0	Serial transmit data output for clocked serial interface (CSI)	-		P40
SI	146	1	Serial receive data input for clocked serial interface (CSI)	<u>-</u>	i	P41
SCK	147	0	Clock output for clocked serial interface (CSI)	-	0	P42
TXD	149	0	Serial transmit data output for asynchronous serial interface (UART)	-	0	P43
RXD	150	ı	Serial transmit data input for asynchronous serial interface (UART)	-	l	P44
scs	151	0	Chip select output for clocked serial interface (CSI)	-	0	P45
SIO_CNTI	121	1	Control input for asynchronous serial interface (UART) Externally input data is loaded in synchronization with the end of RXD of UART.	-	1	DMAACK
SIO_CNTO	122	0	Control output for asynchronous serial interface (UART)	-	0	DMAREQ

(c) Others

Pin Name	Pin No.	1/0		Function	Active	After	Alternate
						Reset	Function
INT	124	0	Interrupt outpu	t to external device	Н	0	-
PSSEL[1:0]	106, 105	1	Parallel/serial i	nterface selection.	-	1	-
			These signals	select a parallel or serial interface as the			
			external interfa	ce.			
			PSSEL[1:0]	Selected interface			
			00	Serial interface (UART)			
			01	Parallel interface (ISA bus)			
			10	Parallel interface (68000 bus)			
			11	Parallel interface (SH-1 bus)			

(6) Port pins

Pin Name	Pin No.	1/0	Function	Active	After Reset	Alternate Function
P30	204	1/0	Port 3.	_	- 1	_
P31	152	1	This is a 4-bit I/O port that can be set in the input or output			
P32	153	1	mode in 1-bit units.			_
P33	154	1	P30 : Connect this pin to GND via a resistor. P32 : This pin outputs an interrupt to the external device to read the DV status. It cannot be used as a port pin when DV is used.			
P34	155					-
P40	145	1/0	Port 4.	-	1	so
P41	146	1	This is a 6-bit I/O port that can be set in the input or output		1	SI
P42	147	1	mode in 1-bit units.			SCK
P43	149	1	P40 to P45 are multiplexed with the pins described under			TXD
P44	150	1	the heading Alternate Function (they cannot be used as		1	RXD
P45	151	1	general-purpose port pins).			scs

(7) External ROM connection pins

Pin Name	Pin No.	1/0	Function	Active	After Reset	Alternate Function
D[15:0]	196, 194 to 189, 186 to 178	1/0	External ROM data bus External ROM data bus used to access external ROM	-	*	
A[17:1]	175, 174, 172, 171, 169 to 167, 165 to 156	0	External ROM address bus External ROM address bus used to access external ROM. A space of 256 KB can be addressed.	_	Ö	_
RDZ	176	0	ROM read This is a strobe signal that indicates a read cycle to the external ROM. It is inactive in the idle state.	L	0	-
WRZ	177	0	ROM write This is a strobe signal that indicates a write cycle to the external ROM.	L	0	_

(8) Clock and reset pins

Pin Name	Pin No.	1/0	Function	Active	After	Alternate
					Reset	Function
RESETB	1	•	Reset. RESETB is asynchronous input. If a signal with a specified low-level width is input to this pin independently of the operating clock, a system reset is effected, taking precedence over all the other operations. This signal can also be used to clear the power-saving mode (HALT or software STOP), as well as for normal initialization and starting. Caution RESETB is active-low.	L	1	
HS_CLK	202	Į	Host clock. This pin inputs the clock that is to be supplied to the CPU core and internal peripheral I/O. This clock is input to the internal clock generator. An internal clock is generated according to the value of HCLKSEL and is supplied to the CPU core and internal peripheral I/O. Usually, input a clock of 27 MHz to this pin.	_	ı	-
HCLKSEL	197		Host clock selection. This pin inputs the clock that is to be supplied to the CPU core and internal peripheral I/O. The relationship between the clock supplied by the HS_CLK pin (27 MHz) and the clock supplied to the CPU core and internal peripheral I/O is as follows: HCLKSEL Internal clock frequency PLL operation 0 54 MHz. Multiplied by 2. 1 Clock stops. PLL operation stops.	-	I	-

(9) Power supply, ground, and others

Pin Name	Pin No.	1/0	Function	Active	After Reset	Alternate Function
3.3Vpp	5, 31, 52. 63, 78, 95, 127, 140, 166, 187	1	3.3 V power supply. Supplies a positive voltage of 3.3 V to the I/O pins of the 3.3 V interface.	-		-
2.5Voo	14, 67, 118, 170	-	2.5 V power supply. Supplies a positive voltage of 2.5 V to the respective internal blocks.	-	1	-
2.5GND 3.3GND	39, 91, 144, 195 9, 35, 56,	-	Ground. These are ground pins. Connect all GND pins to a common ground.	-	-	_
3.3 GND	68, 82, 99, 131, 148, 173,	!	Comment and the parts to a common ground.			
PLLAVoo	199	-	Analog power supply to multiplication circuit. Supplies a positive analog voltage to the PLL. Supply 2.5 V to this pin.	-	-	****
PLLAGND	200	-	Analog ground for multiplication circuit. Analog ground pin for PLL.	-	-	
PLLDV ₀₀	198	1	Digital power supply to multiplication circuit. Supplies a positive digital voltage to the PLL. Supply 2.5 V to this pin.	-	-	-
PLLDGND	201	-	Digital ground for multiplication circuit. Digital ground pin for PLL,	1	1	-
IC(L)	203, 205 to 207	-	Internally connected pins Directly connect these pins to ground.	-	-	-
IFIROME	208	ı	Internal ROM/external ROM select input 0: External ROM mode 1: Internal ROM mode	_	I	-

1.2 Connection of Unused Pins

The following table shows how to connect unused pins.

Table 1-1. Connection of Unused Pins (1/2)

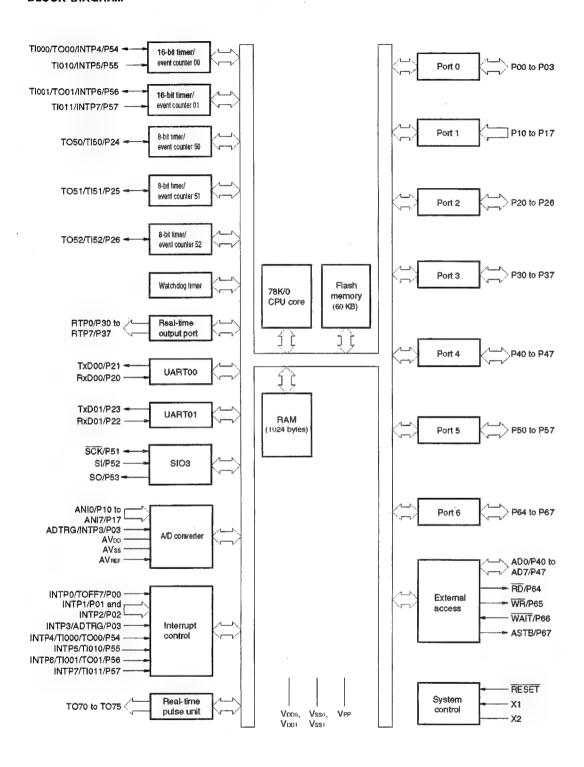

Pin Name	1/0	Interface	Recommended Connection of Unused Pin
PHY_D[7:0]	1/0	I/O Buffer (LVTTL) in 9 mA	Connect these pins to Vco or GND via a
CTL[1:0]	1	With Bus Holder	resistor.
SCLK	1	I/O Buffer (LVTTL) with bus holder	
LREQ	0	3-state Output Buffer (LVTTL) 9 mA	Leave open
LPS	0	Output Buffer (LVTTL) 9 mA	
LINKON	1	Input Buffer (LVTTL)	Connect these pins to Vob or GND via a
STREAM1[7:0]	1/0	I/O Buffer (LVTTL) 6 mA	resistor.

3. PIN FUNCTIONS

3.1 Port Pins

Pin Name	I/O	Function	After Reset	Alternate Function
P00	1/0	Port 0	Input	INTP0/TOFF7
P01	1	4-bit I/O port		INTP1
P02	1	Input/output can be specified in 1-bit units.		INTP2
P03		Use of an on-chip pull-up resistor can be specified by		INTP3/ADTRG
		software setting.		
P10 to P17	Input	Port 1	Input	ANI0 to ANI7
		8-bit input only port		
P20	1/0	Port 2	Input	RxD00
P21	7	7-bit I/O port		TxD00
P22	7	Input/output can be specified in 1-bit units.		RxD01
P23		Use of an on-chip pull-up resistor can be specified by		TxD01
P24	7	software setting.		TI50/TO50
P25				TI51/TO51
P26				TI52/TO52
P30 to P37	1/0	Port 3	Input	RTP0 to RTP7
	8-bit I/O port			
	ļ	Input/output can be specified in 1-bit units.		
		Use of an on-chip pull-up resistor can be specified by		
		software setting.		
P40 to P47	1/0	Port 4	Input	AD0 to AD7
	1	8-bit I/O port		
		Input/output can be specified in 1-bit units.		
		Use of an on-chip pull-up resistor can be specified by		
		software setting.		
P50	1/0	Port 5	Input	
P51		8-bit I/O port		SCK
P52		input/output can be specified in 1-bit units.		SI
P53		LEDs can be driven directly:		so
P54		Use of an on-chip pull-up resistor can be specified by		INTP4/TI000/TO00
P55		software setting.		INTP5/TI010
P56				INTP6/Ti001/T001
P57				INTP7/TI011
P64	1/0	Port 6	Input	RD
P65	7	4-bit 1/O port		WR
P66		Input/output can be specified in 1-bit units.		WAIT
P67		Use of an on-chip pull-up resistor can be specified by software setting.		ASTB

3.2 Non-Port Pins (1/2)

Pin Name	1/0	Function	After Reset	Atternate Function
INTP0	Input	External interrupt request input for which the valid edge	Input	P00/TOFF7
INTP1		(rising edge, falling edge, or both rising and falling	Input	P01
INTP2		edges) can be specified	Input	P02
INTP3			Input	P03/ADTRG
INTP4			Input	P54/TI000/TO00
INTP5			Input	P55/TI010
INTP6			Input	P56/TI001/TO01
INTP7			Input	P57/TI011
TI50	Input	External count clock input to 8-bit timer/event counter 50	Input	P24/TO50
TI51		External count clock input to 8-bit timer/event counter 51	Input	P25/TO51
TI52		External count clock input to 8-bit timer/event counter 52	Input	P26/TO52
TI000		External count clock input to 16-bit timer/event counter 00 Capture trigger input to capture register (CR000, CR010) of 16-bit timer/event counter 00	Input	P54/INTP4/TO00
TI010		Capture trigger input to capture register (CR000) of 16-bit timer/event counter 00	Input	P55/INTP5
TI001		External count clock input to 16-bit timer/event counter 01 Capture trigger input to capture register (CR001, CR011) of 16-bit timer/event counter 01	input	P56/INTP6/TO01
TI011:		Capture trigger input to capture register (CR001) of 16-bit timer/event counter 01	Input	P57/INTP7
TO50	Output	8-bit timer/event counter 50 output	Input	P24/T150
TO51		8-bit timer/event counter 51 output	Input	P25/T151
TO52		8-bit timer/event counter 52 output	Input	P26/T152
TO00		16-bit timer/event counter 00 output	Input	P54/INTP4/TI000
TO01		16-bit timer/event counter 01 output	Input	P56/INTP6/TI001
RTP0 to RTP7	Output	Real-time output port that outputs pulses in synchronization with trigger signals outputs from the real-time pulse unit	Input	P30 to P37
TxD00	Output	Asynchronous serial interface serial data output	Input	P21
TxD01			Input	P23
RxD00	Input	Asynchronous serial interface serial data input	Input	P20
RxD01			Input	P22
SCK	1/0	Serial interface serial clock input/output	Input	P51
SI	Input	Serial interface serial data input	Input	P52
SO	Output	Serial interface serial data output	Input	P53
ANIO to ANI7	Input	A/D converter analog input	Input	P10 to P17
ADTRG	input	External trigger signal input to the A/D converter	input	P03/INTP3
TO70 to TO75	Output	Timer output for the 3-phase PWM inverter control	Hi-Z	_
TOFF7	Input	Timer output (TO70 to TO75) stop external input	Input	P00/INTP0
AD0 to AD7	1/0	Address/data bus for expanding memory externally	Input	P40 to P47
RD	Output	Strobe signal output for reading from external memory	Input	P64
WR		Strobe signal output for writing to external memory	Input	P65
WAIT	Input	Wait insertion at external memory access	Input	P66
ASTB	Output	Strobe output that externally latches address information output to ports 4 and 5 to access external memory	Input	P67
AVREF	input	A/D converter reference voltage input	-	-
AVDD	-	A/D converter analog power supply	_	

3.2 Non-Port Pins (2/2)

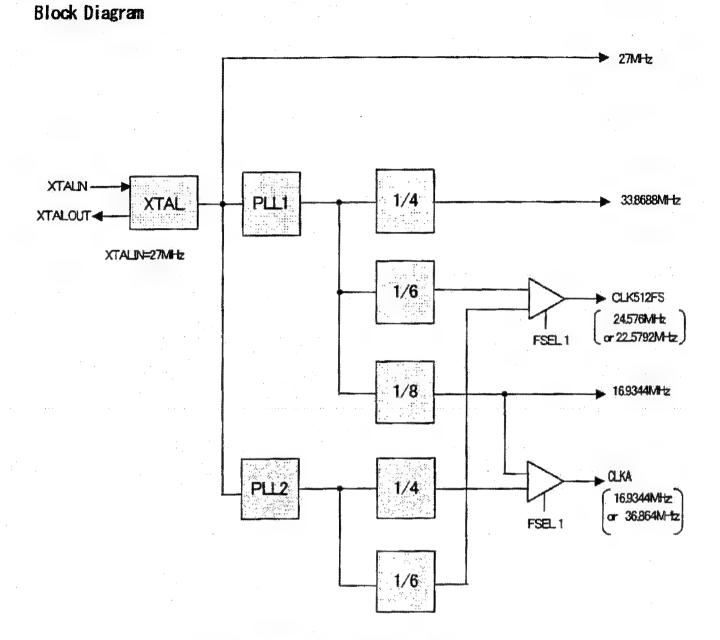

Pin Name	1/0	Function	After Reset	Alternate Function	
AVss	-	A/D converter ground potential	-	_	
RESET	Input	System reset input	_	-	
X1	Input	Connecting crystal resonator for system clock oscillation		-	
X2	-	Ī	-	-	
VDD0	_	Positive power supply for ports	_	-	
Vsso	_	Ground potential for ports	_		
V _{DD1}	-	Positive power supply except for ports	-	-	
Vsst	-	Ground potential except for ports	-	-	
VPP	-	High-voltage application during program write/verify. In the normal operation mode, connect directly to Vsso.	-	-	

3.3 Pin I/O Circuits and Recommended Connection of Unused Pins

The I/O circuit type of each pin and recommended connection of unused pins are shown in Table 3-1. For the I/O circuit configuration of each type, refer to Figure 3-1.

Table 3-1. Types of Pin I/O Circuits

Pin Name	I/O Circuit Type	1/0	Recommended Connection of Unused Pins
P00/INTP0/TOFF7	8-C	1/0	Input: Independently connect to Vsso via a resistor.
P01/INTP1			Output; Leave open
P02/INTP2			
P03/INTP3/ADTRG			
P10/ANI0 to P17/ANI7	25	Input	Independently connect to VDD0 or Vsso via a resistor.
P20/RxD00	8-C	1/0	input: Independently connect to Voco or Vsso via a
P21/TxD00	5-H]	resistor.
P22/RxD01	8-C		Output: Leave open.
P23/TxD01	5-H]	
P24/TI50/TO50	8-C		
P25/TI51/TO51			
P26/TI52/TO52			
P30/RTP0 to P37/RTP7	5-H		
P40/AD0 to P47/AD7			
P50			
P51/SCK	8-C	1	
P52/SI	5-H	1	
P53/SO			
P54/INTP4/TI000/TO00			
P55/INTP5/TI010			
P56/INTP6/TI001/TO01			
P57/INTP7/TI011			
P64/RD			
P65/WR			
P66/WAIT			
P67/ASTB			
TO70 to TO75	4	Output	Leave open.
RESET	2	Input	-
AVpo	_	_	Connect to VDD0.
AVREF			Connect to Vsso.
AVss			
Vpp			Connect directly to Vsso.

FSEL1	CLK512FS	CLKA
OPEN	22 5/92MH	16, 9344MHz
L	24. 576MHz	36, 864MHz

Explanation for terminal function

PIN No.	PIN NAME	FUNCTION
1	V002	Digital VDD for 27MHz clock output
2	VSS2	Digital GND for 27MHz clock output
3	OLK27N	27MHz:clock output
4	TEST	Output for test
5	AVDD	Analog VOO
6	AVSS	Analog GND
7	XTALOUT	Standard crystal output
8	XTALIN	Standard crystal input
9	OLKA	clock output (FSEL1=Open: 16, 9344MHz, FSEL1=L: 36, 864MHz)
10	QLK512FS	clock output (FSEL1=Open: 22 5792NHz, FSEL1=L:24.576NHz)
11	DVSS	Digital GND
12	DVDD	Digital VDO
13	CLK16M	16. 9344MHz clock output
14	FSEL1	Output select :with pull-up
•		Open: 16, 9344MHz (9pin), 22, 5792MHz (10pin)
		L :36. 864Mtz (9pin), 24. 576Mtz (10pin)
15	CLK33M	33, 8688NHz clock output:
16	Œ	Output enable (open:enable, Lidisable) with pull-up

1:VDD2		16:0E
2:VSS2	O	15:CLK33M
3: CLK27M		14:FSEL1
4:TEST		13:CLK16M
5:AVDD		12:DVDD
6: AVSS		11:DVSS
7:XTALOUT		10:CLK512FS
8:XTALIN		9 : CLKA

IC7604: BA7082F, DVIO Board, PLL IC

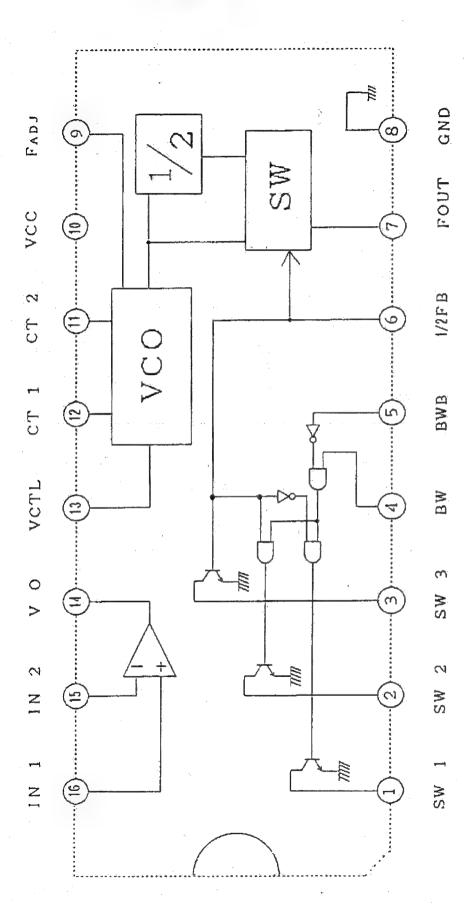

Fig-2 Block diagram

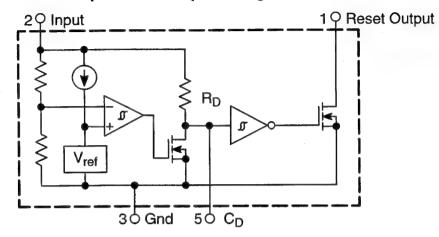

No.	Symbol	IN	OUT	normal Voltage	Internal pin configuration	Description
1	SW1			L 0.1V	0~0	Pin 1-3 are output pins at LOGIC parts for adjustment frequency sencitivity.
2	SW2		0	- OPEN		These pins are open collector output.
3	SW3			5V		
4	B W				4.5 W BIAS	Pin 4,5 are input pins at logic parts for adjustment frequency sencitivity.
5	BWB					
6	1/2FB	0			5 BIAS	Pin 6 is input pin at LOGIC parts for adjustment frequency sencitivity and changing 1/2 Frequency demultuplier. "H" is through output and "L" is 1/2 Frequency demultiplier output.
7	Fout		0	3.6V	2 1 m A	VCO Output.
8	GND	_		0V	GND	GND
9	FADJ			2.5V	S 3	Pin9 is a pin to adjust f0. It is possible to adjust f0 by added resistor(RADJ). If Value of RADJ down, oscillation frequency up. (Use to RADJ>22kΩ).

No.	Symbol	IN	OUT	normal Di Voltag	Internal pin configuration	Description
10	vcc		-	5.0V	VCC	VCC
11	CT2			1.9V	1 (2)	Pin 11,12 are added capasitor pins for oscillation. Use to added capacitor between CT1 and CT2.
12	CT1				150 M	If value of capacitor down, oscillation frequency up.
13	VCTL	0		2.5V	10 K N 20	Pin13 is control pin for VCO. A regular this pin connect pin14(VO).
14	V 0		0	2,5V	350 u A	Pin14 is output pin at Amlplfier for sencitivity ajdustment. Adjustment amplifier GAIN by added resistor.
15	IN2	0		2.5V	103	Pin15,16 are input pins at amplifier for sencitivity adjustment. In1; normal input In2; inversion input
16	IN1)		∠.J¥	(5) M 103 70uA	THE , HINGLEIOH HIMUL

PACKAGE PIN DESCRIPTION

PACKAGE PIN #		
SO-8	PIN SYMBOL	FUNCTION
1	V _{CC}	Power supply input.
2	PWRGD	Open collector output goes low when V _{FB} is out of regulation. User must externally limit current into this pin to less than 20 mA.
3	PGDELAY	External capacitor programs PWRGD low-to-high transition delay.
4	COMP	Error amp output. PWM comparator reference input. A capacitor to LGND provides error amp compensation and Soft Start. Pulling pin < 0.45 locks gate outputs to a zero percent duty cycle state.
5	GATE(H)	High-side switch FET driver pin. Capable of delivering peak currents of 1.5 A.
6	GATE(L)	Low-side synchronous FET driver pin. Capable of delivering peak currents of 1.5 A.
7	V _{FB}	Error amplifier and PWM comparator input.
8	GND	Power supply return.

IC7703 ADV7196A, Digital Board 2.1 Chrysalis, Progressive Scan Video Encoder

FUNCTIONAL BLOCK DIAGRAM

ADV7196A

PIN FUNCTION DESCRIPTIONS

Pin	Mnemonic	Input/Output	Function
1, 12	V _{DD}	P	Digital Power Supply
2–11	Y0–Y9	I	10-Bit Progressive Scan/HDTV Input Port for Y Data. Input for G data when RGB data is input.
13, 52	GND	G	Digital Ground
14–23	Cr0-Cr9	I	10-Bit Progressive Scan/HDTV Input Port for Color Data in 4:4:4 Input Mode. In 4:2:2 mode this input port is not used. Input port for R data when RGB data is input.
24, 35	V _{AA}	P	Analog Power Supply
25	CLKIN	I	Pixel Clock Input. Requires a 27 MHz reference clock for standard operation in Progressive Scan Mode or a 74.25 MHz (74.1758 MHz) reference clock in HDTV mode.
26, 33	AGND	G	Analog Ground
27	DV	I	Video Blanking Control Signal Input
28	VSYNC/	I	VSYNC, Vertical Sync Control Signal Input or TSYNC Input Control Signal in
	TSYNC		Async Timing Mode
29	HSYNC/ SYNC	I	HSYNC, Horizontal Sync Control Signal Input or SYNC Input Control Signal in Async Timing Mode
30	SCL	I	MPU Port Serial Interface Clock Input
31	SDA	I/O	MPU Port Serial Data Input/Output
32	DAC C	0	Color Component Analog Output of Input Data on Cb/Cr9-0 Input Pins
34	DAC A	0	Y Analog Output
36	DAC B	0	Color Component Analog Output of Input Data on Cr9-Cr0 Input Pins
37	COMP	0	Compensation Pin for DACs. Connect 0.1 µF capacitor from COMP pin to VAA.
38	R _{SET}	I	A 2470 Ω resistor (for input ranges 64–940 and 64–960; output standards EIA-770.1-EIA-770.3) must be connected from this pin to ground and is used to control the amplitudes of the DAC outputs. For input ranges 0–1023 (output standards RS-170, RS-343A) the R _{SET} value must be 2820 Ω .
39	V _{REF}	I/O	Optional External Voltage Reference Input for DACs or Voltage Reference Output (1.235 V)
40	RESET	I	This input resets the on-chip timing generator and sets the ADV7196A into Default Register setting. Reset is an active low signal.
41	ALSB	I	TTL Address Input. This signal sets up the LSB of the MPU address. When this pin is tied high, the 1 ² C filter is activated which reduces noise on the I ² C interface. When this pin is tied low, the input bandwidth on the I ² C interface is increased.
42–51	Cb/Cr9-0	I	10-Bit Progressive Scan/HDTV Input Port for Color Data. In 4:2:2 mode the multiplexed CrCb data must be input on these pins. Input port for B data when RGB is input.

9.13 List of Abbreviations

Analog Board

+5VSTBY

Permanent Supply 5V

8SC2

Pin8 Scart2 (only for Europe)

A_DATA

Data from Analog- to Digital-Board (UART-Communication)

A_RDY

Analog-board ready (status information to digital-board)

A18 - A19

Parallel Address Bus (CC - Flash-ROM and S-RAM)

A8 - A17

Parallel Address Bus (CC - Flash-ROM and S-RAM)

AD0 - AD7

Parallel Address and Data Bus (CC - Flash-ROM and S-RAM)

AFC

Automatic Frequency Control

AFEL

Audio Frontend Left

AFER

Audio Frontend Right

AGC / WSRI

Automatic Gain Control (for Europe), Wide Screen Rear In (for NTSC)

AINFL

Audio In Front Left

AINFR

Audio In Front Right

AKILL

Audio Kill Signal

ALADC

Audio Left to ADC

ALDAC

Audio Left from DAC

ALE

Address Latch Enable

AM0

Adress-mode 0

AM1

Adress-mode 1

ARADC

Audio Right to ADC

ARDAC

Audio Right from DAC

ASCC1M

Audio Scart 1 Mute (System Clock Output for Real time Clock-

Adjustment)

AVCC Power Supply for A/D-converter

AVSS

GND-Pin for A/D-converter

CFIN

RESET_DIG

Control Signal for REC-LED
